SPECIAL NOTICE

We publish the AE-index of 1983 prior to that of 1982. This is because the World Data Center A for Solar Terrestrial Physics (Boulder, Colorado), using funds from NASA, is digitizing the whole set of magnetograms necessary for advanced derivation of the index for the period of the magnetospheric tail crossing by the ISEE-3 (October 1982 -December 1983). By the use of the data we are now deriving the provisional AE-index for the period. The same digitized data were used for the derivation of the index in this Data Book No.11 but we followed the normal procedure for quality check which was omitted in the quick derivation of the provisional index.

The schedule of the publication of our Data Book hereafter is as follows;

Data Book No. 12	AE index for July - December, 1982
13	July - December, 1983
14	January - June, 1982
15	January - June, 1984
16	July - December, 1984

All inquiries about the Data Book and its distribution including change of address should be sent to

World Data Center C2 for Geomagnetism

PREFACE

The Auroral Electrojet (AE) index was originally introduced by Davis and Sugiura in 1966 as a measure of global electrojet activity in the auroral zone, and it is now widely used for studying geomagnetism, aeronomy and solar-terrestrial physics. The index was first derived at the Geophysical Institute of the University of Alaska, and hourly values were published for the years 1957 to 1964. The production of 2.5 min value was then tried at the Goddard Space Flight Center of NASA, and the results from September 1964 to June 1968 were published.

After that, the index was regularly published at the World Data Center A (WDC-A) in Boulder, Colorado, and the Center published 2.5 min values for the years 1966 to 1974 and 1.0 min values for 1975 and the first 4 months of 1976.

When it became difficult to continue the production of the AE-index at the WDC-A, it was requested that the index be produced at the WDC-C2 for Geomagnetism which is operated by Data Analysis Center for Geomagnetism and Spacemagnetism, Faculty of Science, Kyoto University. We decided to produce the index for two years (1978-1979) during the International Magnetospheric Study (IMS) and have published 1.0 min values as a part of "WDC-C2 for Geomagnetism Data Book" series.

Although the International Association of Geomagnetism and Aeronomy (IAGA) recommended the continuation of the production of the AE-index at the WDC-C2, we could not extend it to the period after IMS because the available man-power and computing facilities were not sufficient for the continuous derivation.

Increasing demands for the index, however, moved us to resume the production of the AE-index and we published Data Book No.7 which contained the index for the first half of 1980. After that, the possibilities of financial support necessary for the production of the index were explored at the Subcommittee on Solar Terrestrial Physics of the Special Committee for International Cooperation, Japan Science Council, and the support was asked to National Institute of Polar Research (NIPR), Tokyo. After Data Book No. 8, the cooperation has been made between the Kyoto University and NIPR. The index is derived at the WDC-C2 and the printing and distribution are made by NIPR.

In derivation of the AE-index in this Data Book No.11 we used digitized data which were specially prepared by the WDC-A for STP in order to promote the use of the index in the data analyses for the period of the ISEE-3 magnetospheric tail crossing. This issue is, therefore, produced as the result of cooperation among the three organizations (WDC-C2 for Geomagnetism, NIPR and WDC-A for STP).

Auroral Electrojet Indices (AE)

for January - June 1983

1. Derivation and Representation

The AE index is derived from the horizontal component of geomagnetic variations observed at some (10-13) observatories along the auroral zone in the northern hemisphere. To normalize the data from each station, a base value of each station for each month is first calculated by averaging all the data of the station on the five international quiet days, and this base value is subtracted from every-day data of the station in that month. Then the largest and smallest values are selected from all the stations. The largest value is called the AU index and the smallest value is called the AL index. These names came from the upper and lower envelopes of the overlapped figure of the data from these stations. The difference between the AU and AL indices gives the AE index, and the mean value of the AU and AL indices gives the AO index. The term "AE indices" is usually used to describe those four indices (AU, AL, AE and AO) in all.

The AU and AL indices are understood to express the strongest current density of the eastward and westward auroral electrojet, respectively. The AE index is understood to represent the overall activity of the electrojets, and the AO index is regarded as a measure of the equivalent zonal current.

In this report we shall present every-day diagrams and hourly values of the AE indices and "Contributing stations plot" of the AE indices which may give more information about the indices. That is, we named stations which give the AU and AL indices "the contributing stations of the AU and the AL index, respectively, and a pair of these AU and AL contributing stations "the contributing stations of AE indices". The plot gives these AE contributing stations on a plane whose coordinates are UT in abscissa and LT in ordinate at the stations. For users who want to check the AE indices in detail, this plot gives information about data availability of each station.

2. Data Used

To obtain good AE indices, we must use as many observatories as possible, but we meet two big difficulties: One is that the distribution of observatories in operation is not uniform over the auroral zone, and the other is that the digitization of magnetograms is a heavy job.

We used 11 observatories listed in Table 1. The distribution of the stations are shown in Fig. 1. Cape Wellen was not used in this volume to reduce digitization time as its contribution to AE indices is not frequent. Of these, 6 stations are taking digital data directly (called digital stations).

Table 1. List of AE(12) stations.

Observatory	Abbreviations		Geographic		Geomagnetic	
	IAGA	WDC-A	Lat. ($^{\circ}$ N)	Long. ($^{\circ}$ E)	Lat. ($^{\circ}$ N)	Long. ($^{\circ}$ E)
Abisko	ABK	AI	68.36	18.82	66.04	115.08
Dixon Island	DIK	DI	73.55	80.57	63.02	161.57
Cape Chelyuskin	CCS	CC	77.72	104.28	66.26	176.46
Tixie Bay (Cape Wellen)	TIK	TI	71.58	129.00	60.44	191.41
Barrow	BRW	BW	71.30	203.25	68.54	241.15
College	CMO	CO	64.87	212.17	64.63	256.52
Yellowknife	YKC	YEK	62.40	245.60	69.00	292.80
Fort Churchill	FCC	FC	58.80	265.90	68.70	322.77
Great Whale River	GWC	GWR	55.27	282.22	66.58	347.36
Narssarssuaq	NAQ	NAS	61.20	314.16	71.21	36.79
Leirvogur	LRV	LR	64.18	338.30	70.22	71.04

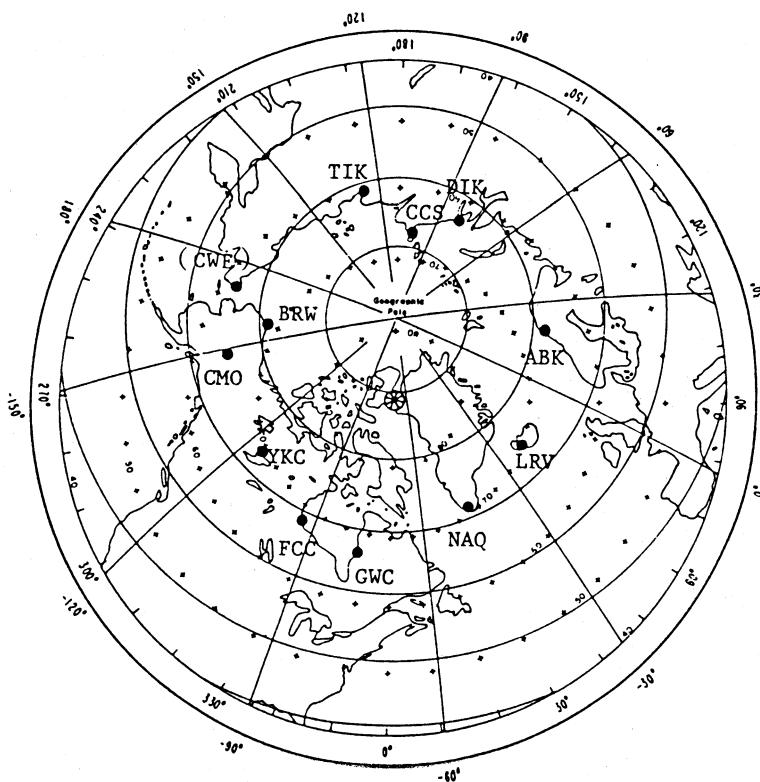

Fig. 1. Distribution of AE(12) stations.

Geographic latitude is indicated by the concentric circles of solid lines. Geomagnetic latitude is indicated by the numbered concentric circles formed by + signs. Geographic longitude is given by the outer circle of numerical values with meridians shown as solid lines every 30° . Geomagnetic longitude is given by the inner circle of numbers and the border of hash-marks at 10° intervals.

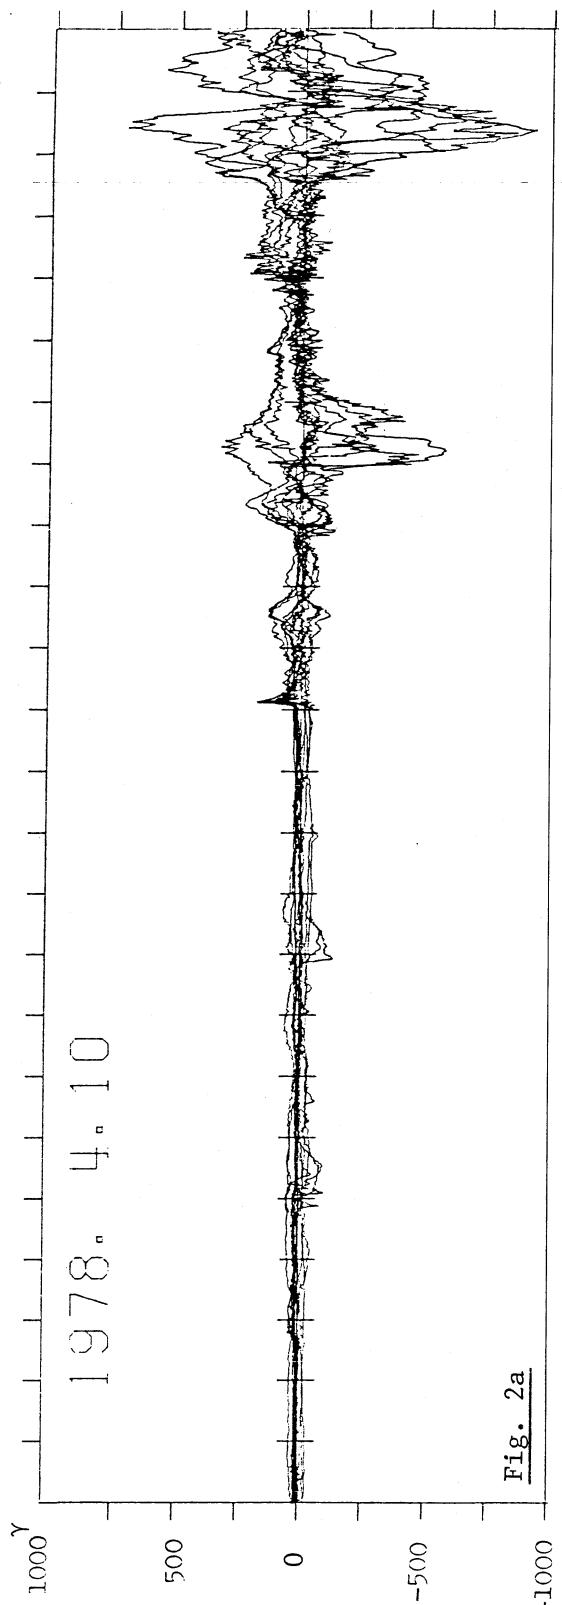

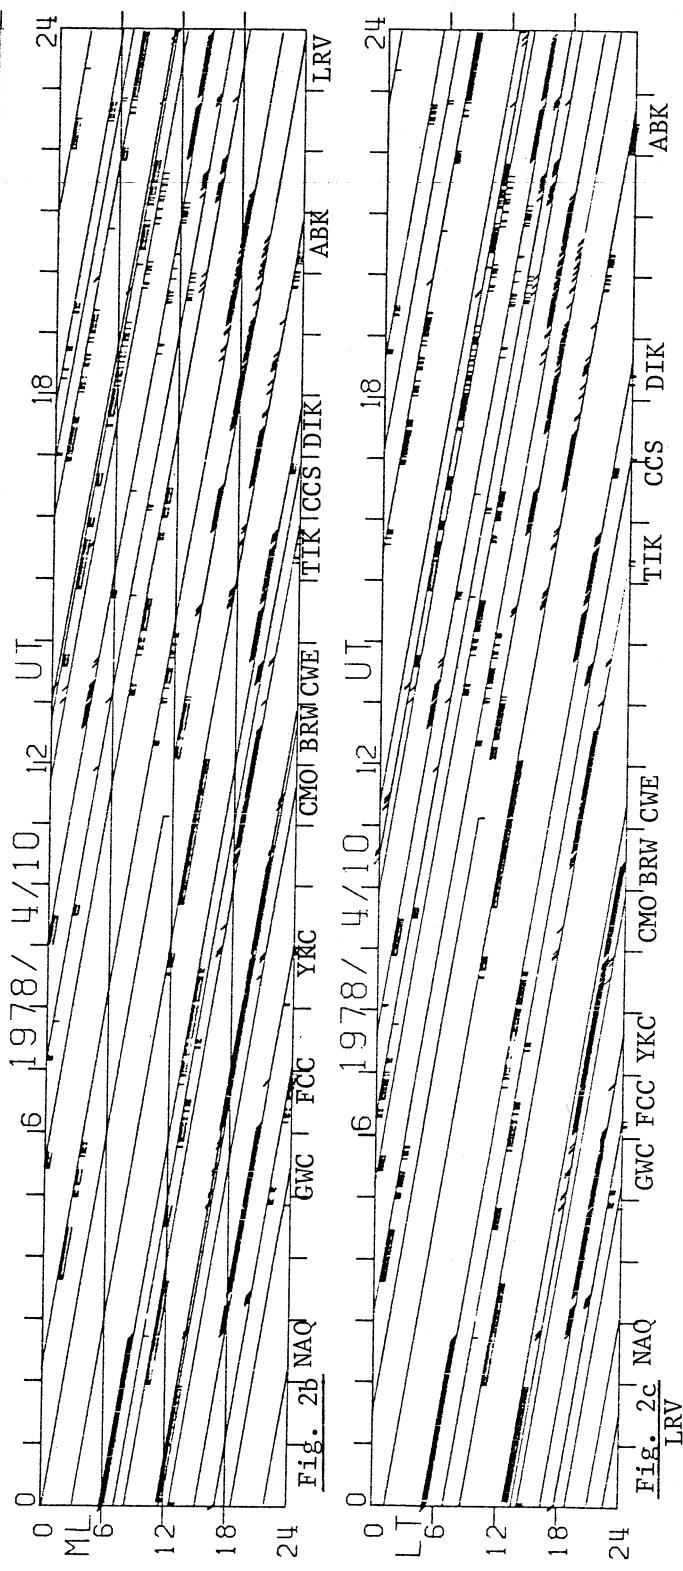

Fig. 2a

Three of digital stations (Fort Churchill, Great Whale River, and Yellowknife) are stations which give data in the X, Y, Z coordinate system. To make these data more compatible to other stations, we converted the X and Y components to H component by $H=(X^2+Y^2)^{1/2}$, and we treated the resulted H component to be missing for the period either X or Y is missing. For other three digital stations (Barrow, College and Narssarssuaq), we used the original digital H-component data.

If a digital station has troubles in digital recording, we digitized its magnetograms on microfilm if they are available. As digital data from College had long missing periods in May and June 1983, we digitized its magnetograms for most of these two months.

We used digitized Abisko data supplied from the station.

For other analogue stations (Leirvogur, Cape Chelyuskin, Dixon Island and Tixie Bay), we used digitized data supplied from WDC-A for STP for most of this period, which were specially prepared for the analyses of the ISEE-3 tail crossing period. But hand traced magnetograms were used at the digitization for CCS, DIK and TIK, as photocopies were not available at that time. In derivation of the provisional AE index, we used the data as they were. In this volume we applied normal quality check on the data to keep quality mentioned in data book No.3 and No.4, by using microfiche copy of the normal run magnetograms which we received recently. As we redigitized only serious data and corrected most errors by correcting programs, some small errors under the error detection criterion may not be removed.

3. The Overlapped Plot and the Plot of the Contributing Stations of the AE indices

Fig. 2a shows an example of the overlapped plot of the H traces from the AE stations on April 10, 1978. The upper envelope gives the AU index and the lower envelope gives the AL index, Figs. 2b and 2c show sample plots of the contributing stations for the same day as in Fig. 2a, in the geomagnetic (2b) and geographic (2c) local times, where the upper and lower plumes on a diagonal line for each station show the contribution to the AU and AL indices of this station. In Fig. 2b, for example, the data of Dixon Island (DIK) give the AU index from 0000 to 0240 UT and again from 1330 to 1530 UT, and the AL index from 0640 to 0830 UT. It is seen that from 1100 to 1200 UT Leirvogur (LRV) offers no data. Since this is a key station for the AL index at that time, the exact AL values at that time might be lower than the calculated values.

Some explanations are necessary for our trial plots of the contributing stations. On the plots hereafter, the ordinate is the geomagnetic local time (MLT). The MLT is defined by the difference of the geomagnetic longitude of the station and the geomagnetic longitude of the Sun, and it is a function of the geomagnetic longitude of the station, season, and universal time. Figs. 3a, 3b, 3c show the difference between the GLT and the MLT of the stations used to derive AE indices for winter, summer and equinox, respectively. In these figures the GLT is shown by the straight line which runs diagonally, and the MLT is shown by the T (or inverted T) shaped mark. The length of the vertical line from the diagonal line is the difference between GLT and MLT. Note that for some stations the differnce between GLT and MLT is as much as 2 hours.

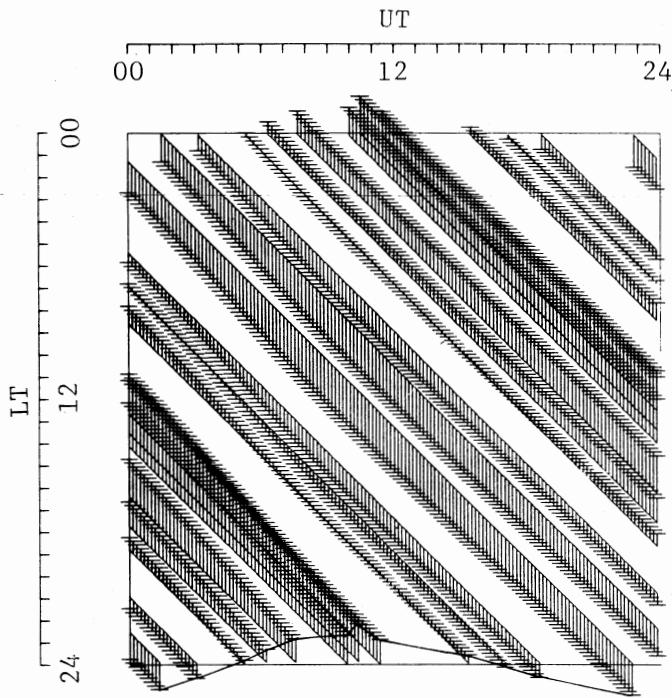

Fig. 3a Difference between GLT and MLT in winter.

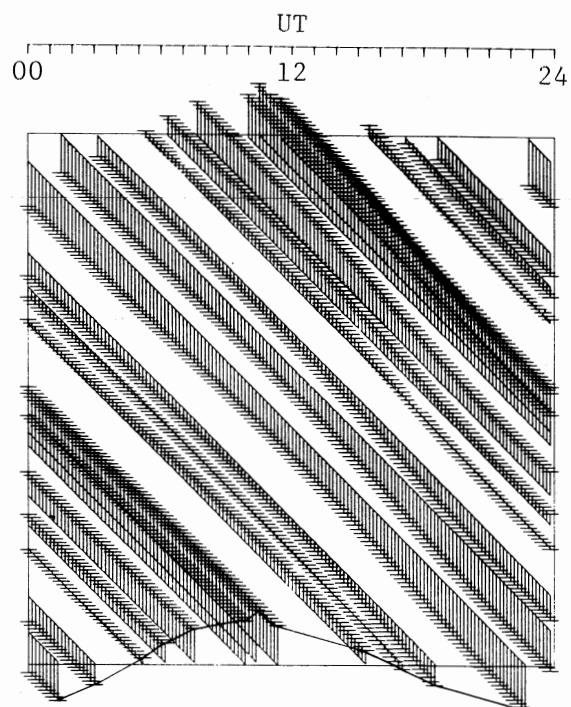

Fig. 3b Difference between GLT and MLT in summer.

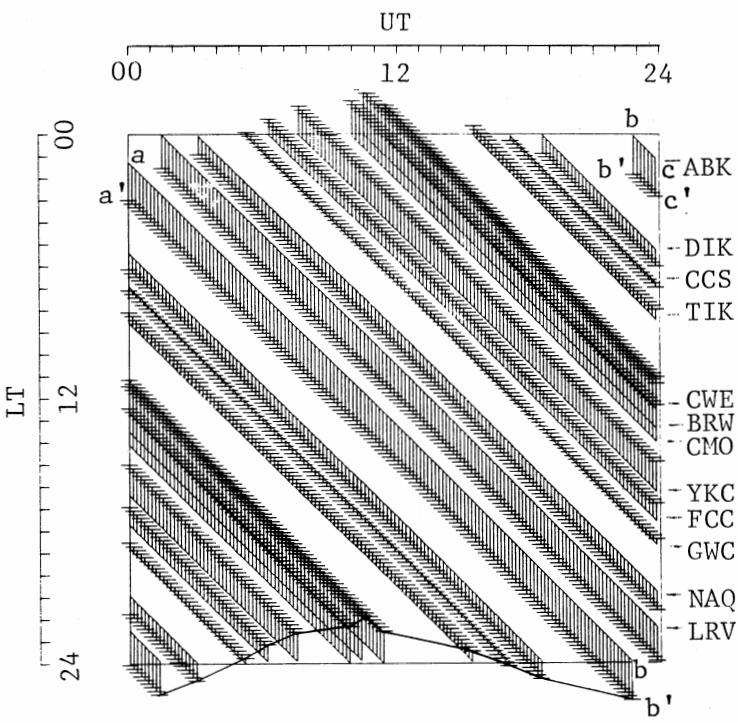

Fig. 3c Difference between GLT and MLT in equinox.

Fig. 3a, 3b and 3c show the difference between the geographic local time (GLT) and the geomagnetic local time (MLT) for winter, summer and equinox, where $a-b-c$ (full line on the top or bottom of the vertical lines) shows the relation between UT and GLT, and $a'-b'-c'$ (crossing of the vertical and horizontal lines) shows the relation between UT and MLT for each of the AE(12) stations.

As Cape Wellen (CWE) was not used in this volume, difference between Barrow and Cape Wellen is not available in this volume.

4. Results

Monthly quiet-time H reference values for January-June 1983 are listed in Table 2. Table 3 gives the hourly average values of AE indices on every day from January to June 1983.

Daily graphs of 1.0-min AE indices (AU, AL, AE and AO) are shown in Fig. 4, and corresponding plots of the contributing stations are given in Fig. 5. Fig. 6 shows the H-traces of magnetograms from AE(11) stations in every month from January to June 1983. Finally, Fig. 7 shows a half year of hourly mean values of each index in one page.

5. Acknowledgements

This volume has been accomplished by the data supply from the AE stations through the World Data Centers. Acknowledgements are due to Mr. H. W. Kroehl of the WDC-A for Solar-Terrestrial Physics for supplying digitized data. Acknowledgements are also due to Ms. Y. Yamamoto, Mr. S. Yokoyama and Dr. T. Iyemori of WDC-C2 for Geomagnetism for assistance at calculation and making plots, also to Dr. M. Ayukawa and Mr. Y. Katsuta for arrangements for printing and distribution.

We thank Dr. M. Sugiura of NASA for various assistances to realize quick derivation of AE indices. We also thank Dr. E. Friis-Christensen of Danish Meteorological Institute and Dr. T. Bergmark of Geological Survey of Sweden for quick supply of digital data.

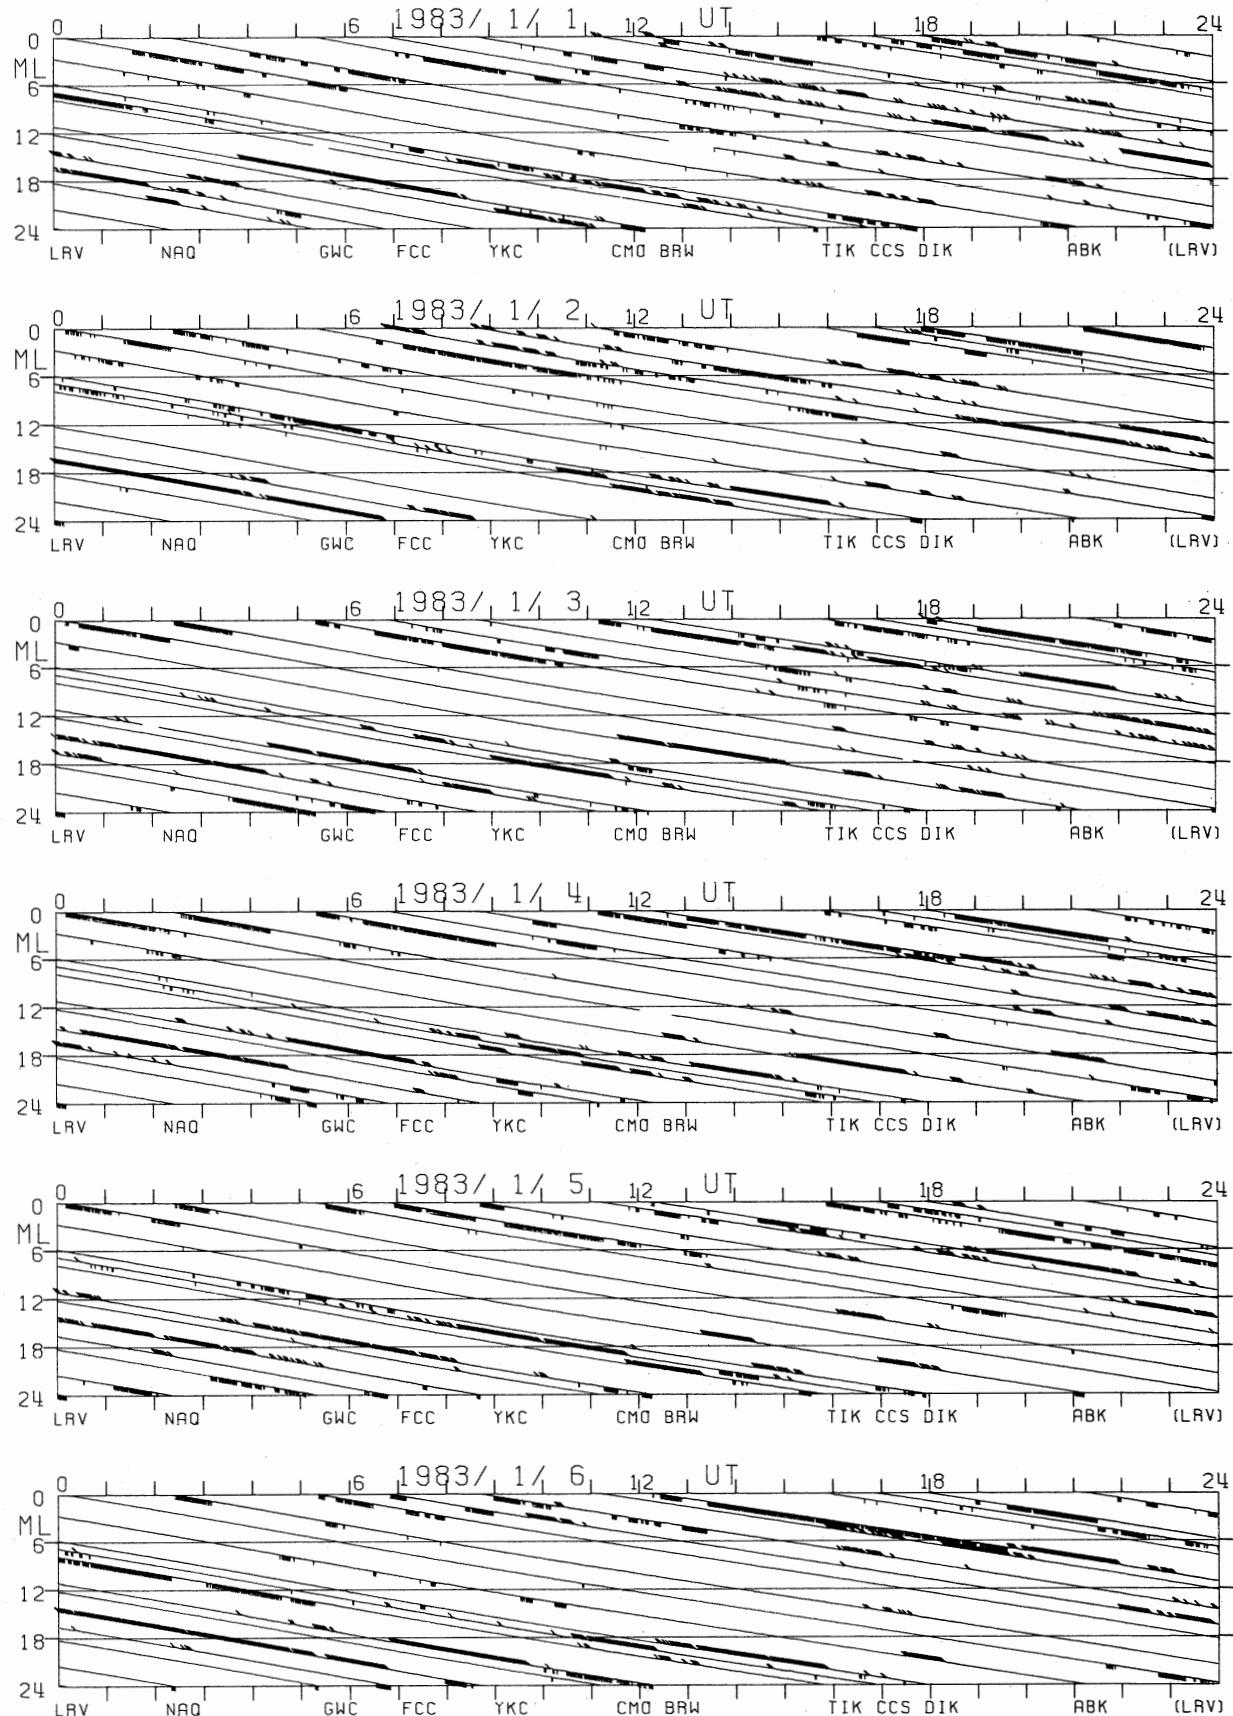

FIGURE 4 (on even pages)

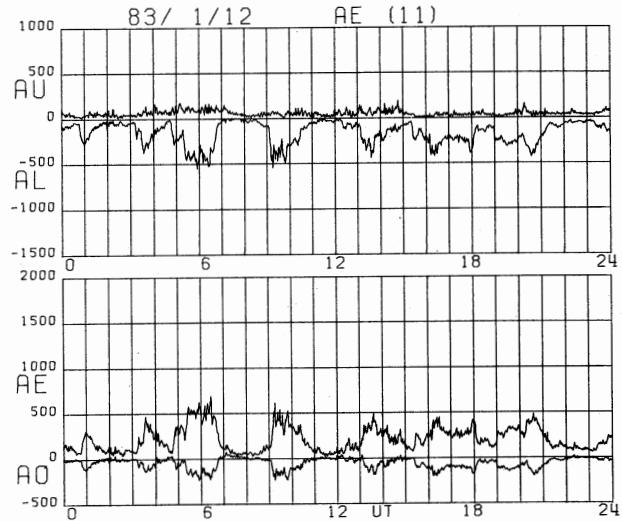

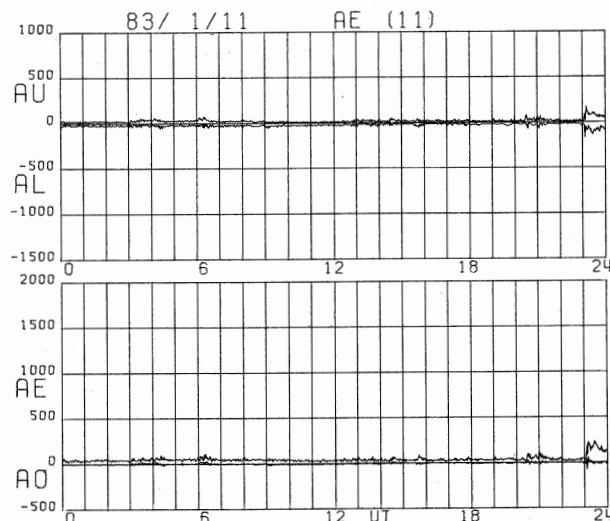

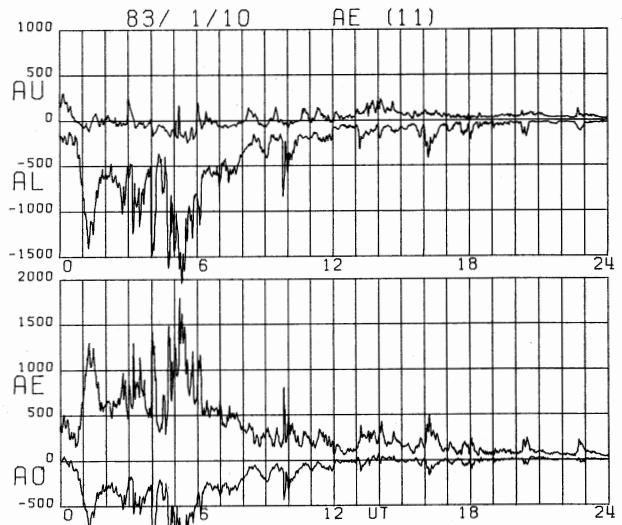

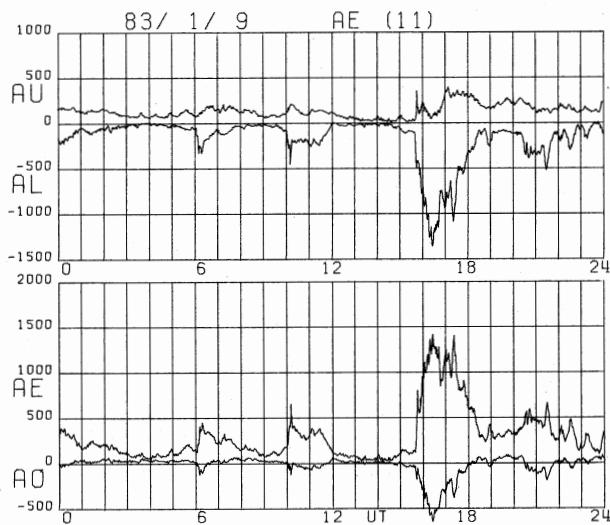

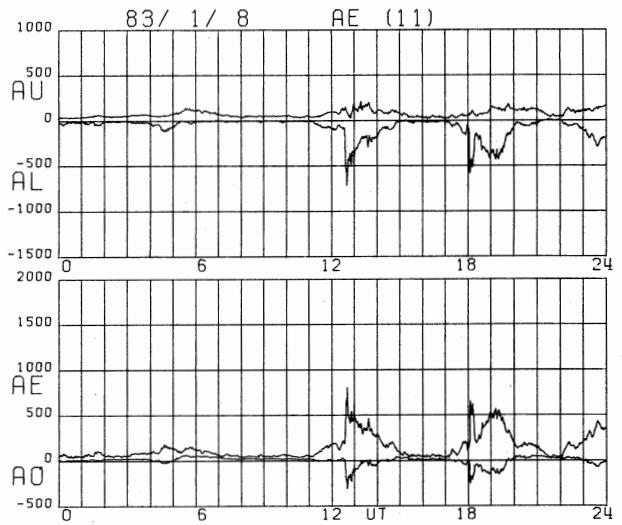

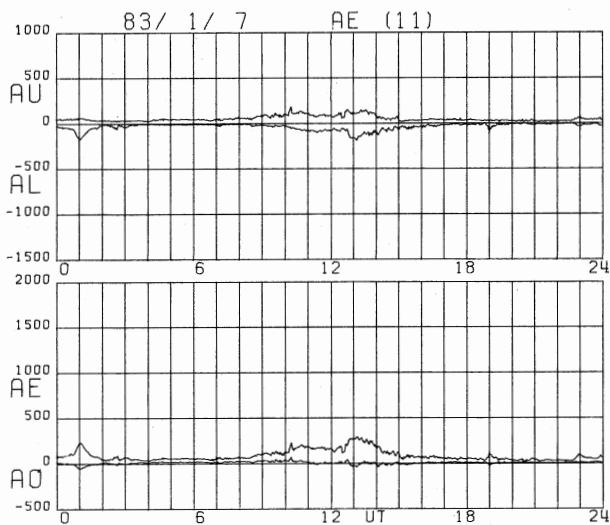

Daily graphs of 1.0-min AE indices (AU, AL, AE and AO) for January-June 1983. Graphs on very disturbed days (Feb. 4, 5, May 24 and June 13) are reproduced on pages 94 and 95.

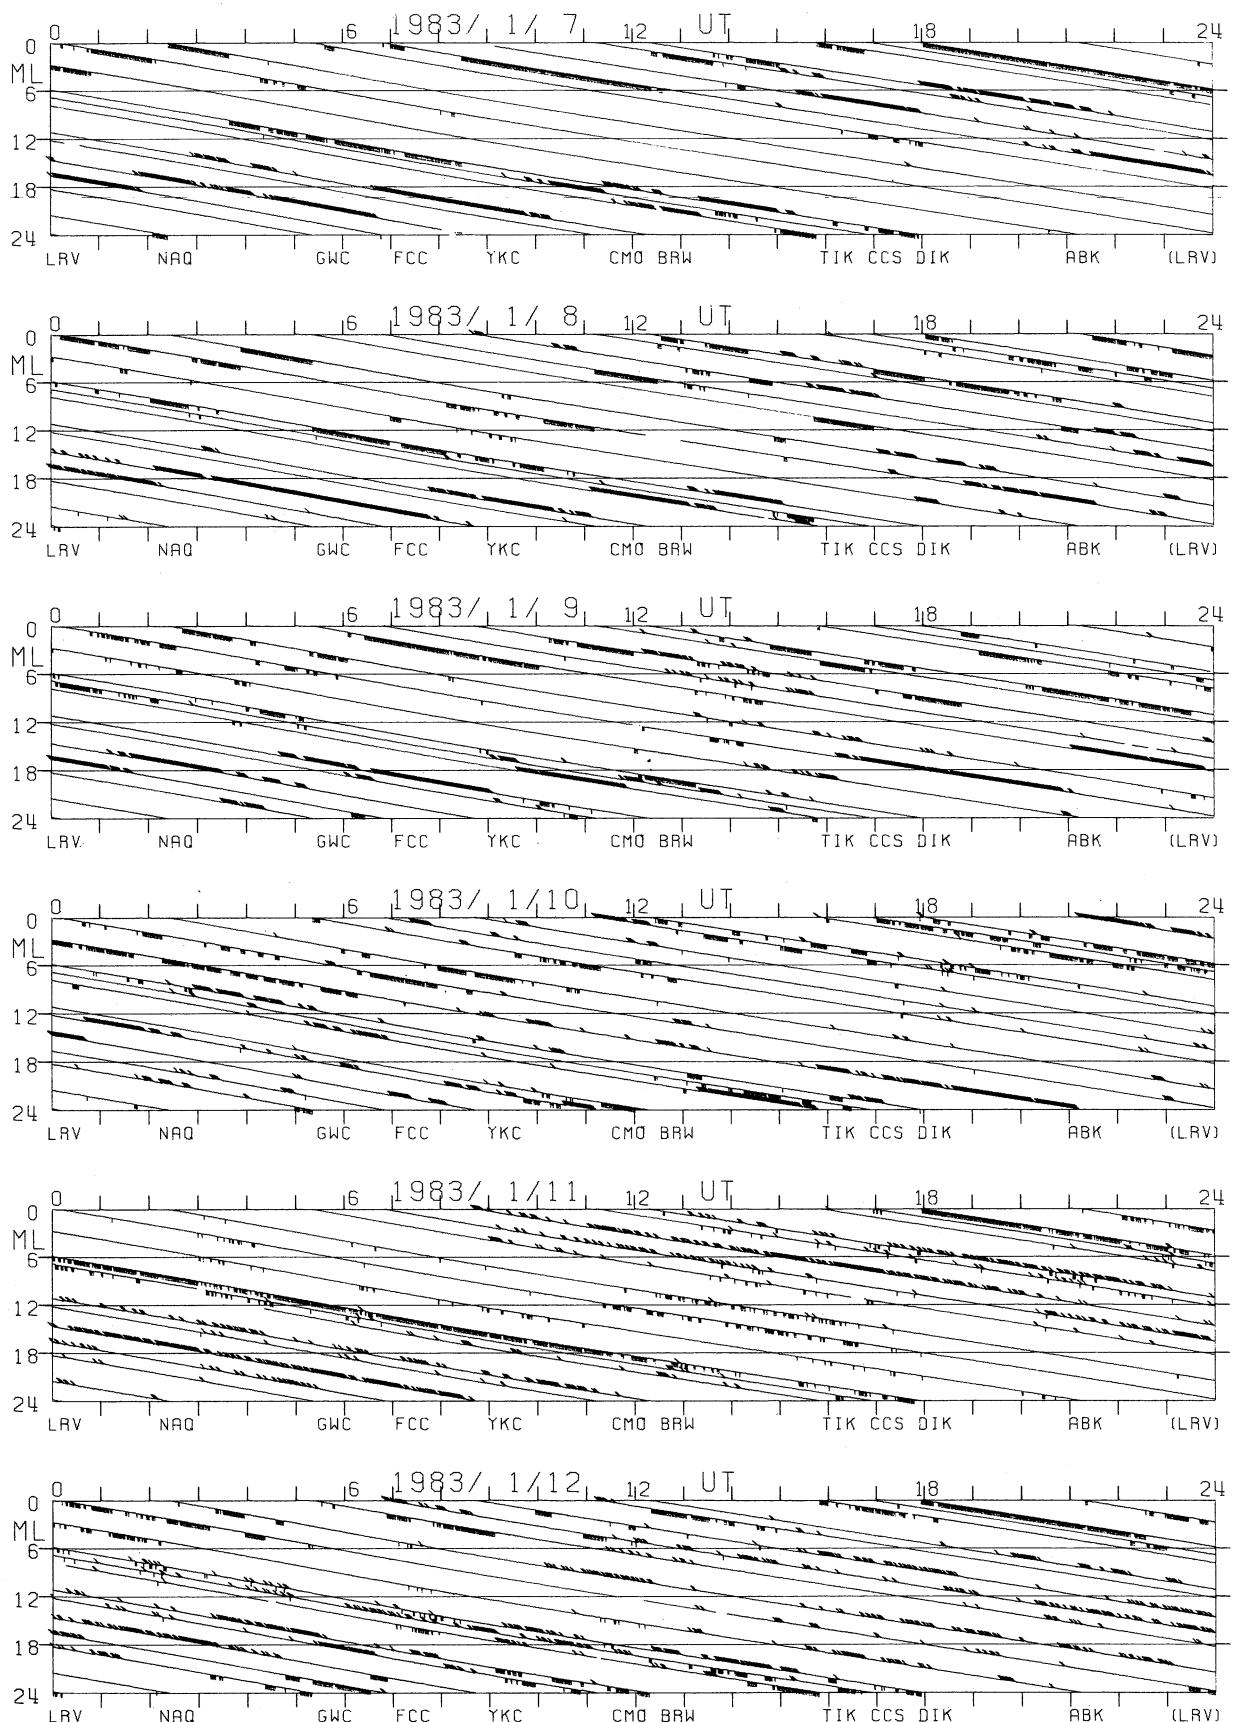

FIGURE 5 (on odd pages)

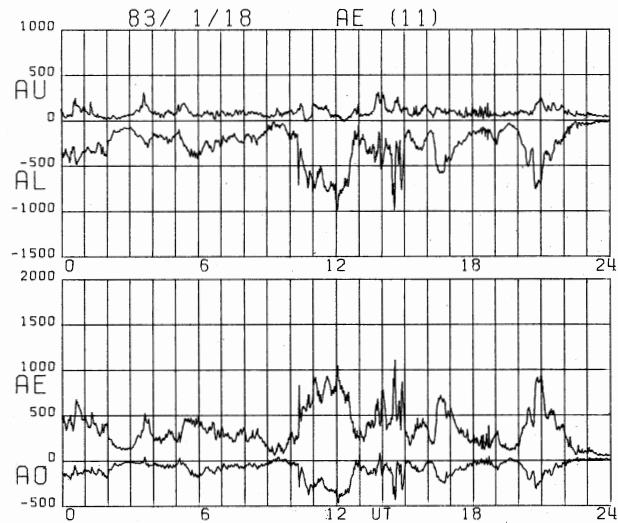

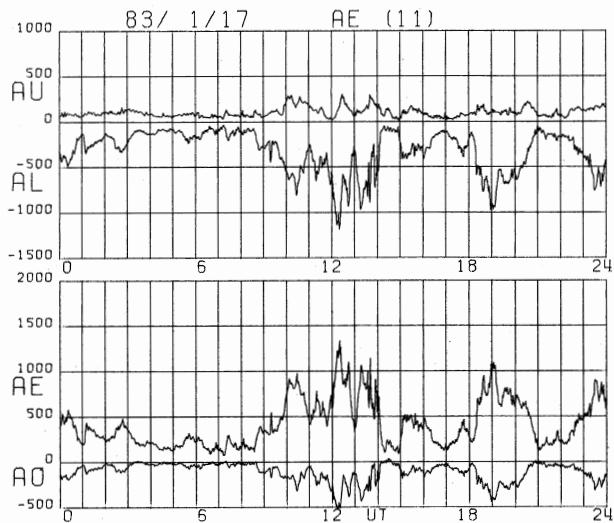

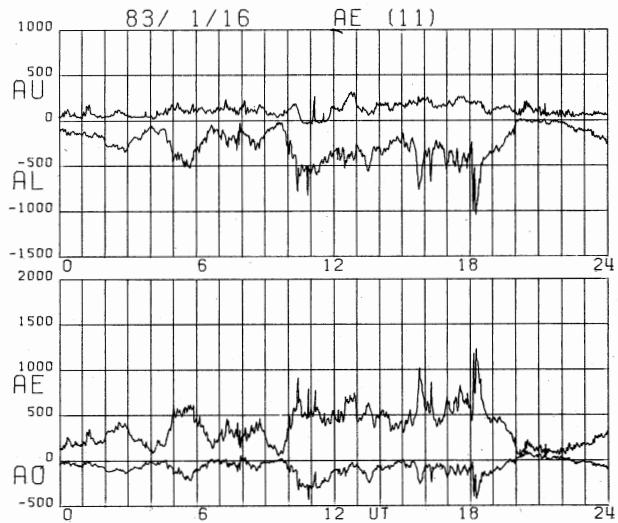

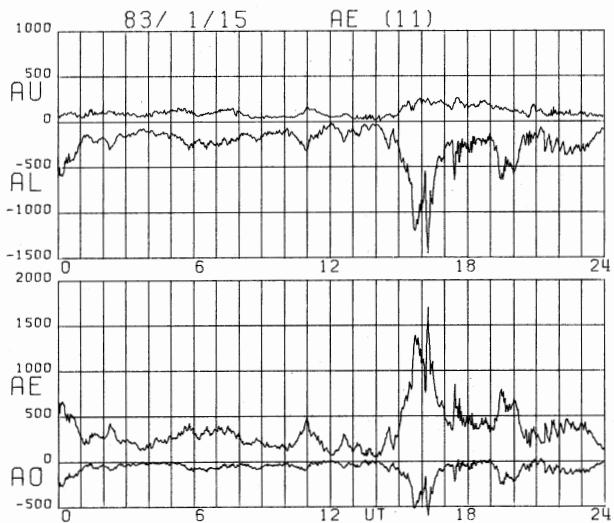

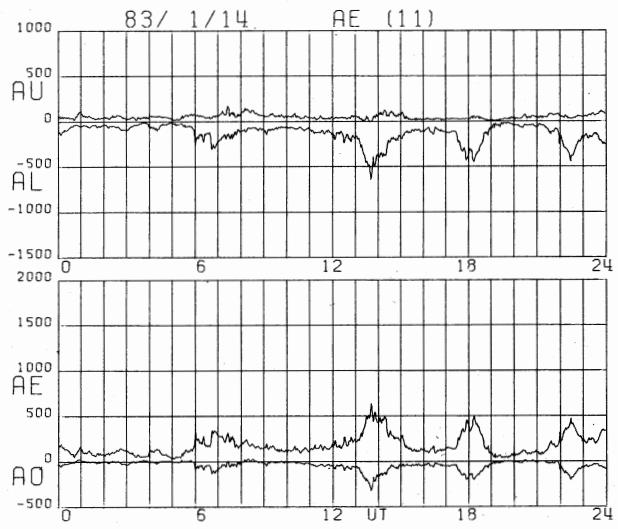

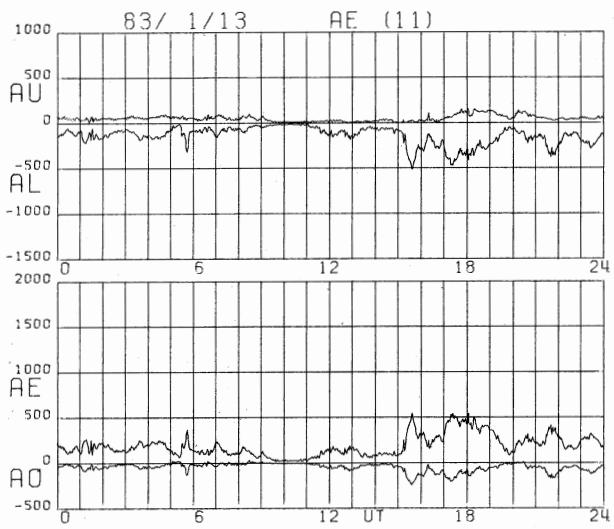

Plots of the contributing stations to the AU (upper plumes) and AL (lower plumes) indices, where you can see which station contributes to these indices at each UT minute.

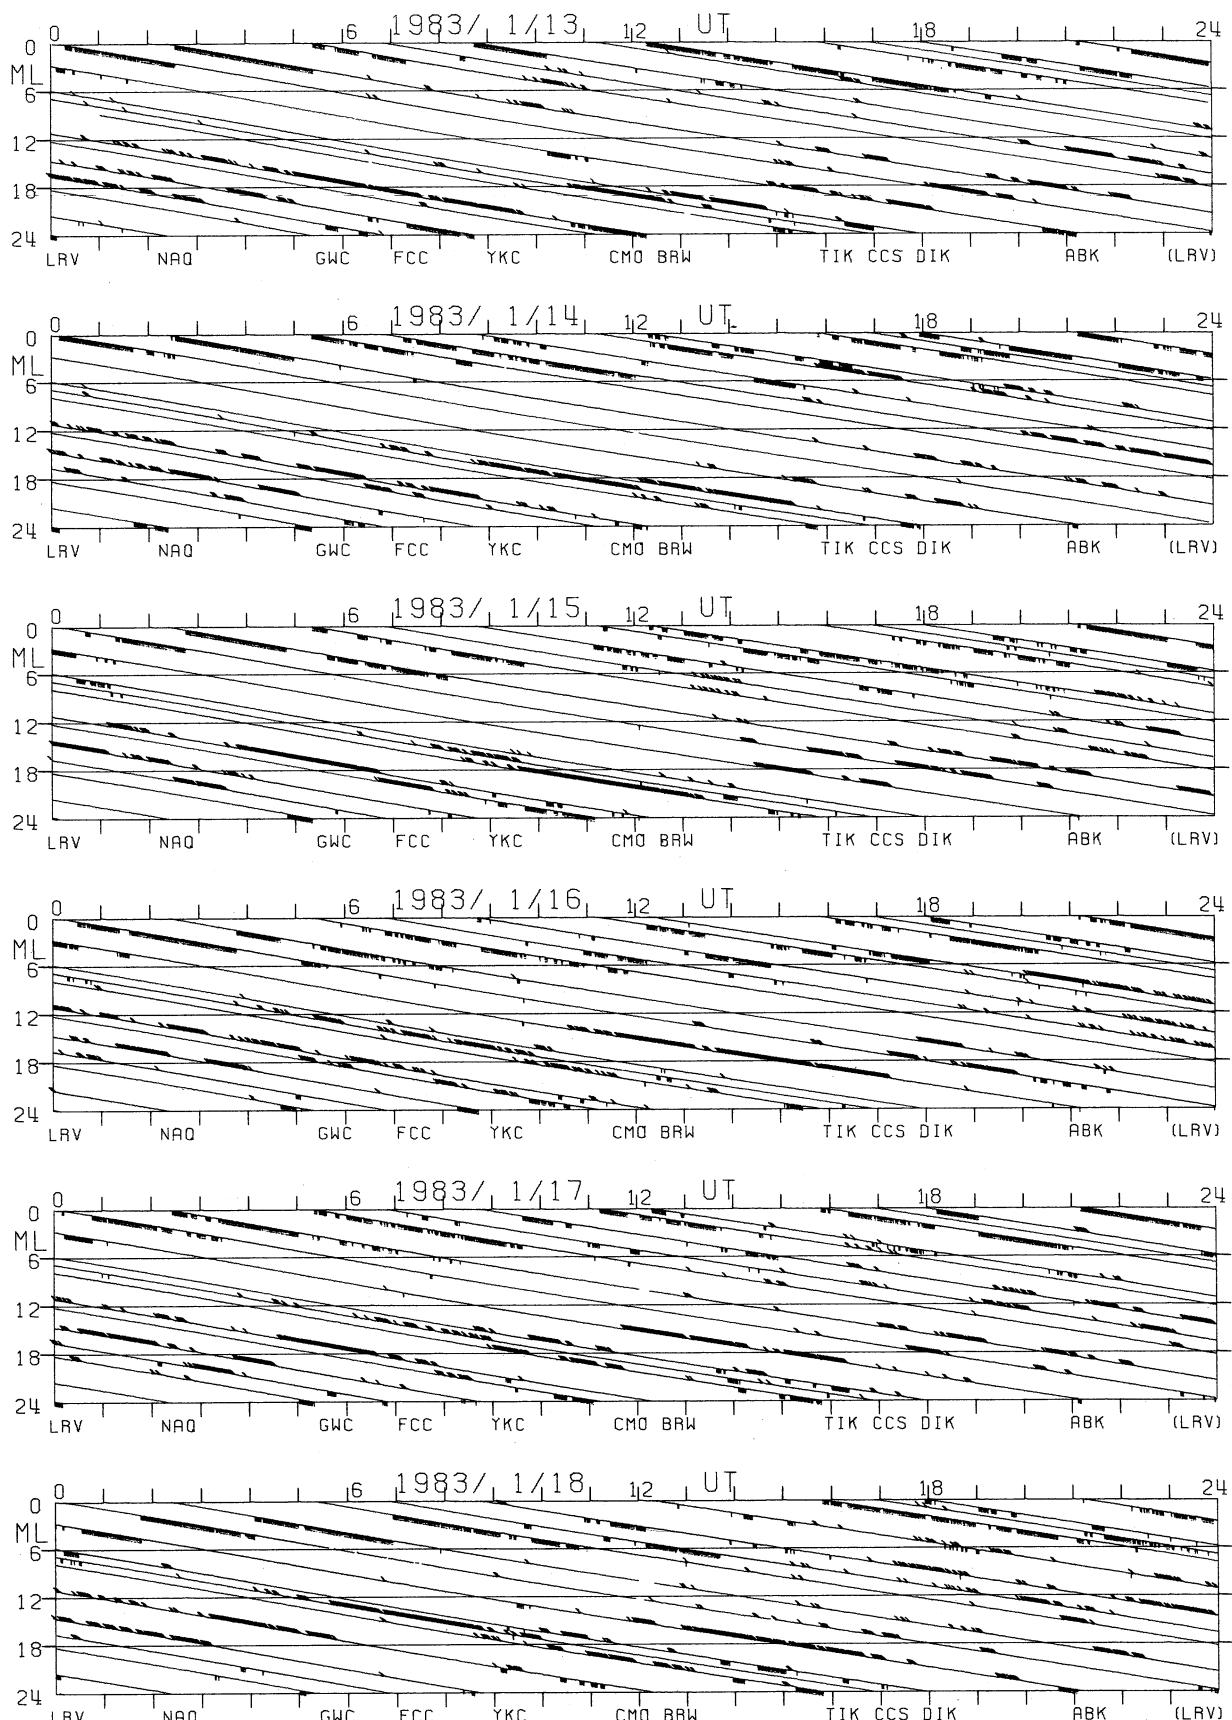

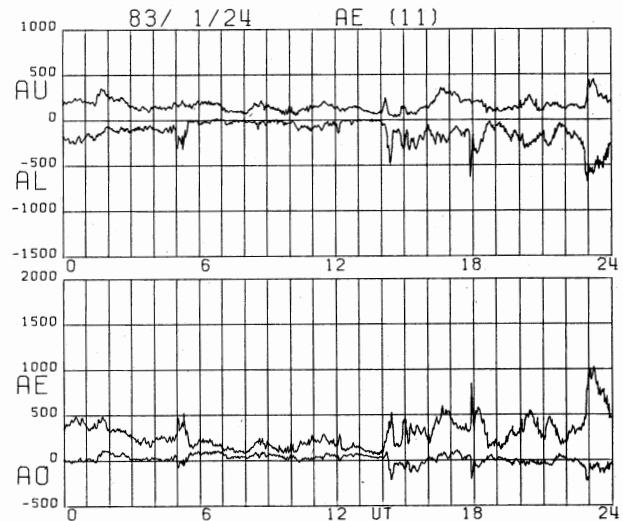

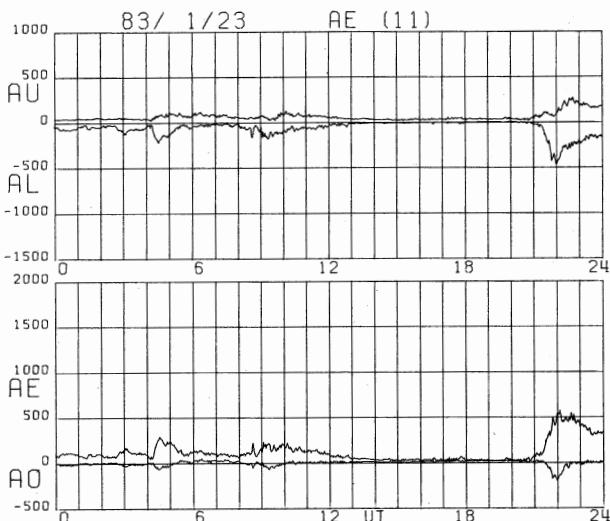

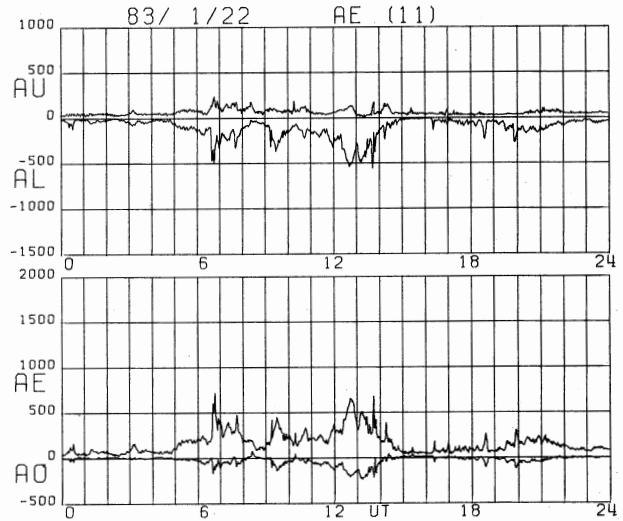

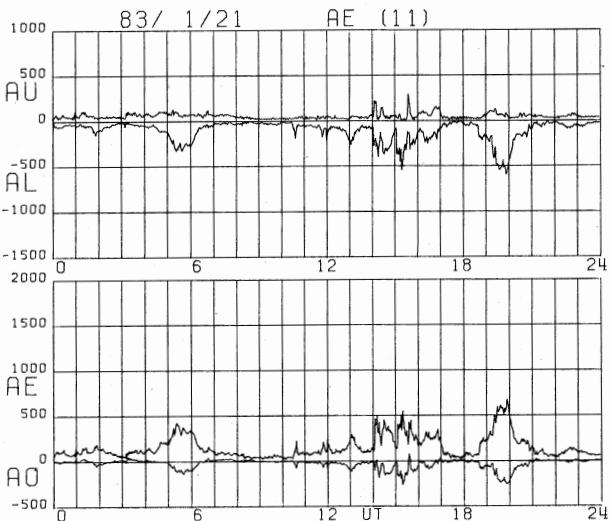

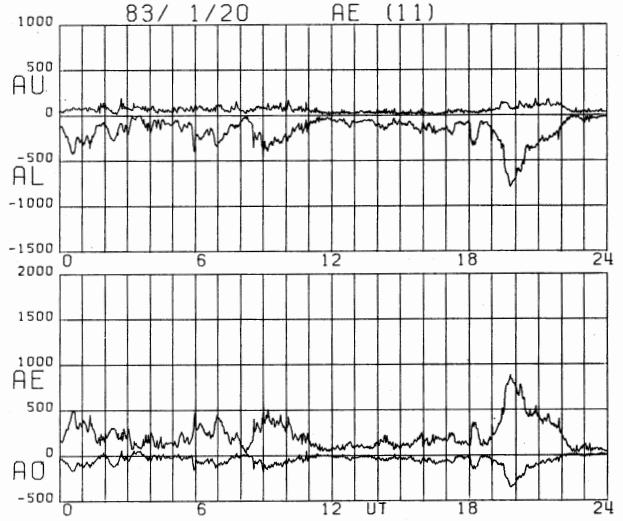

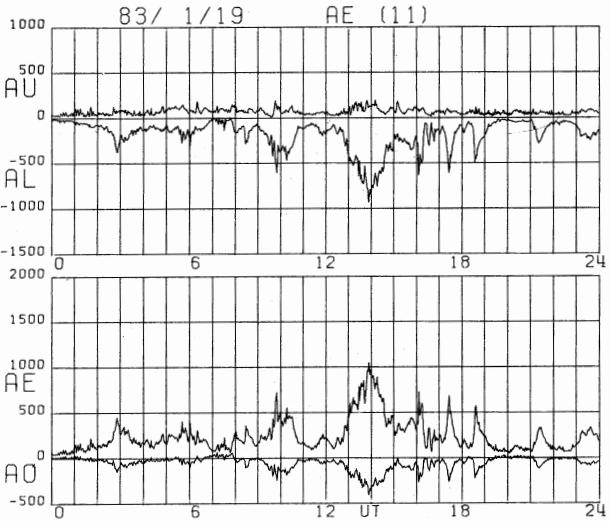

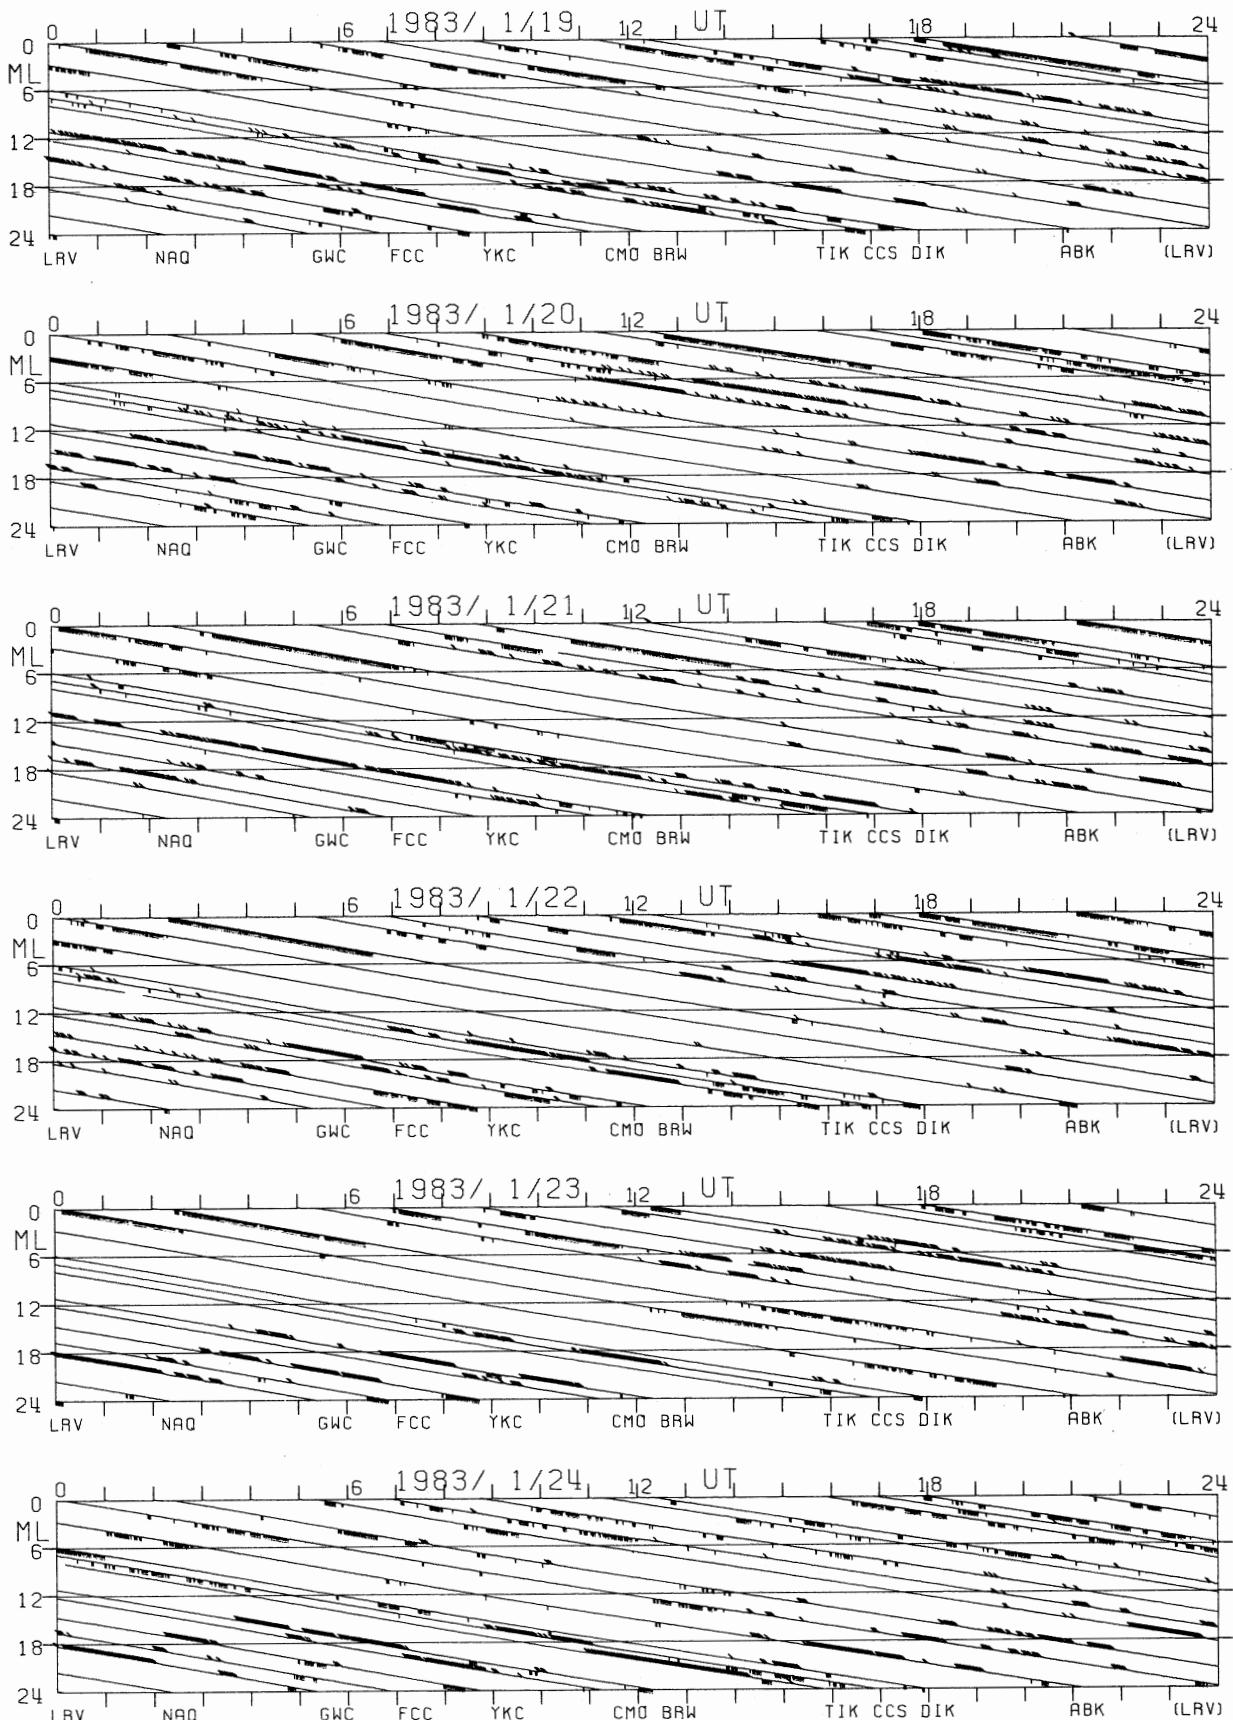

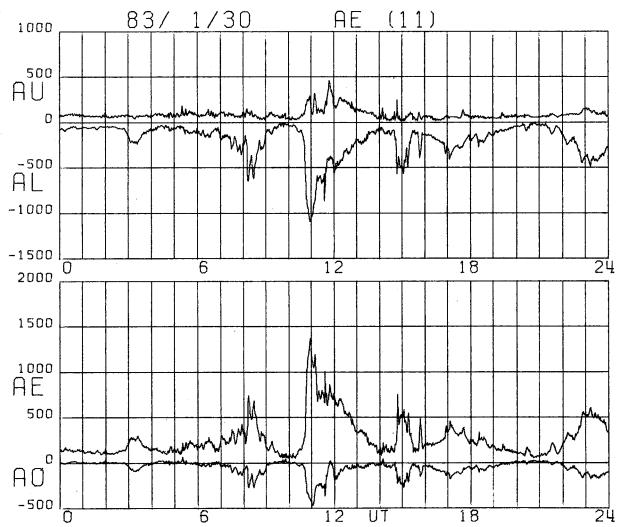

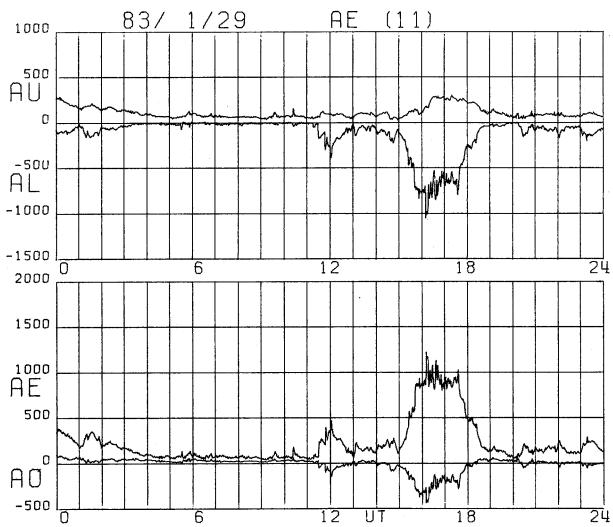

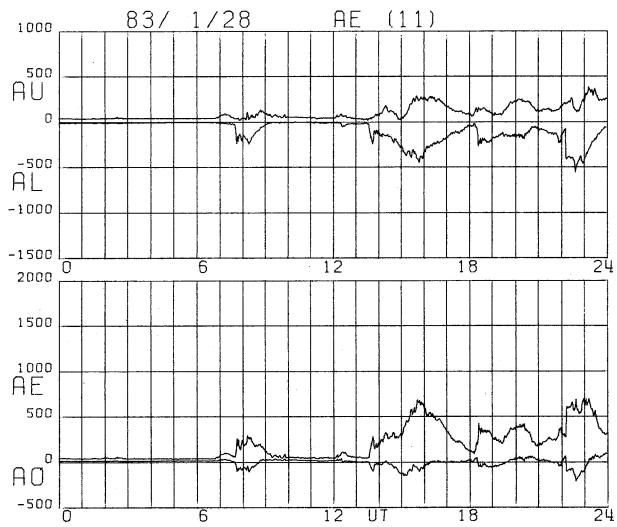

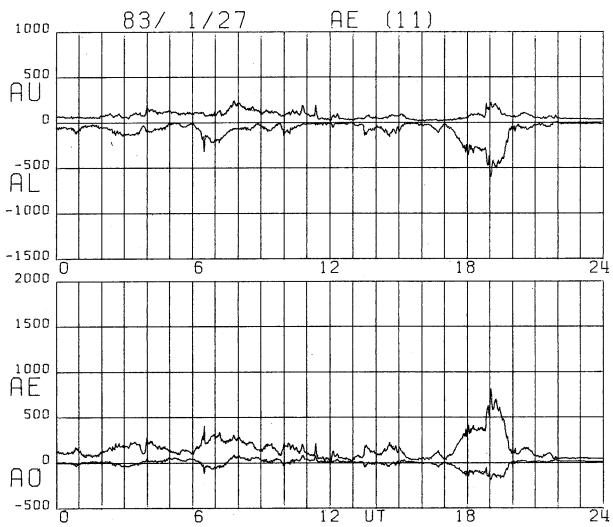

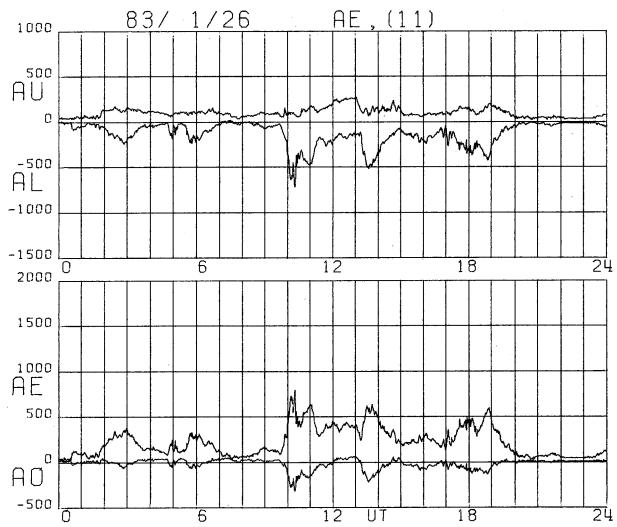

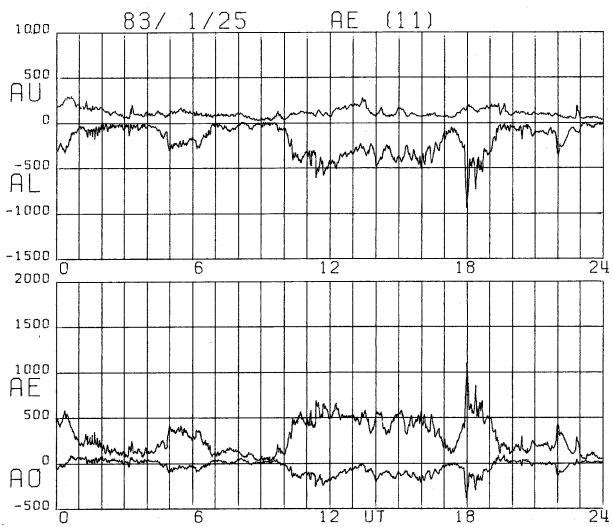

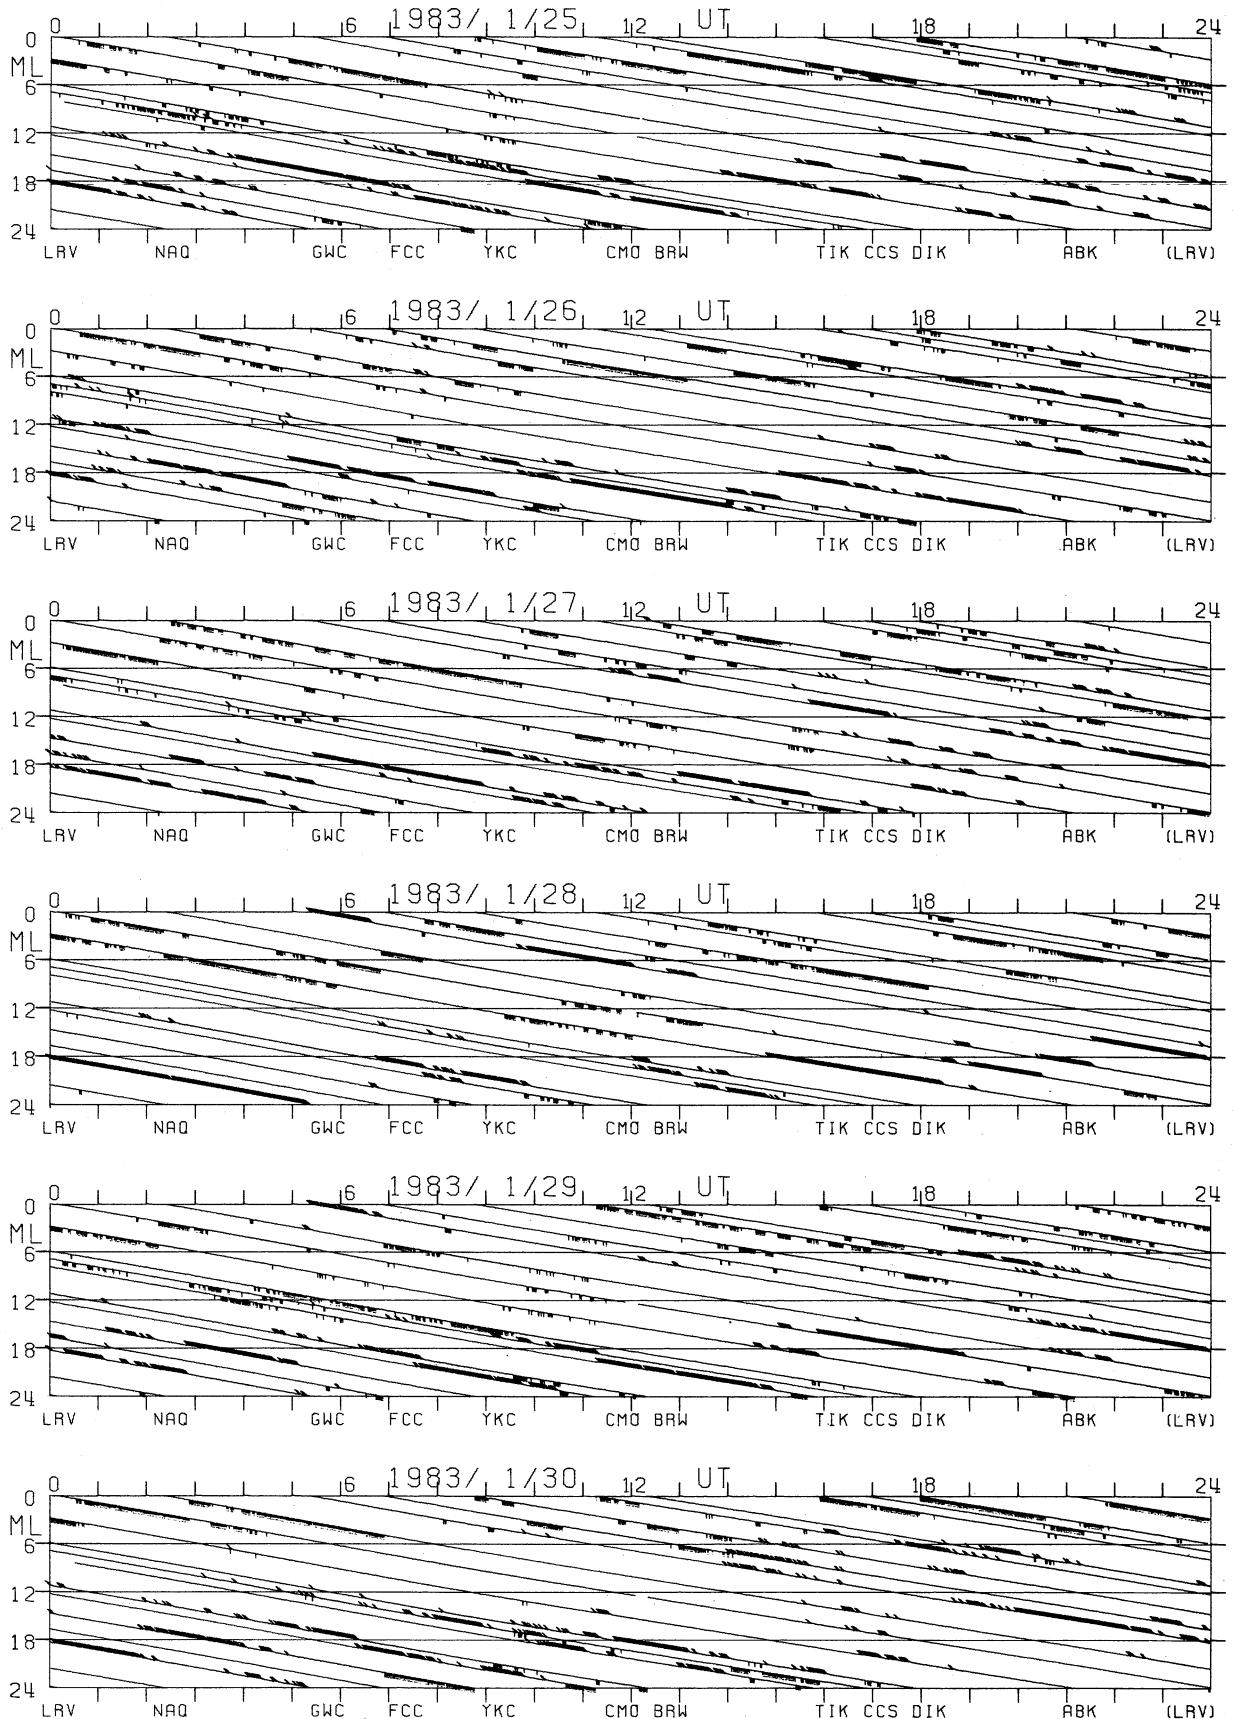

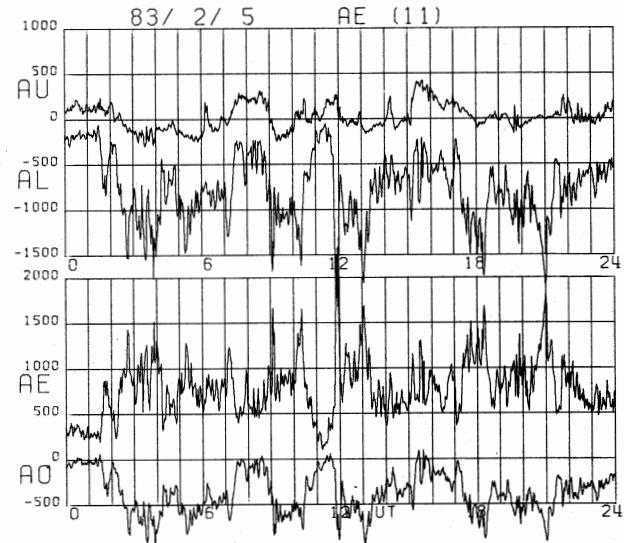

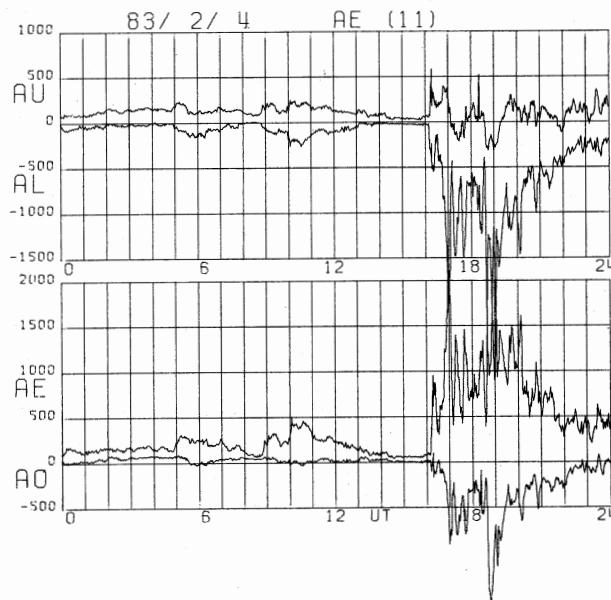

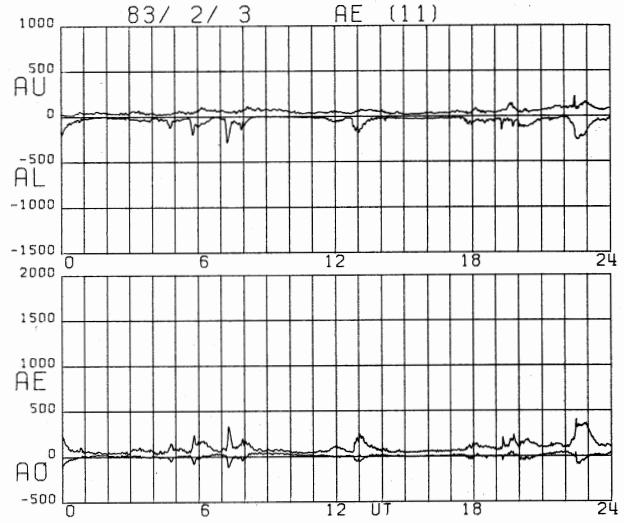

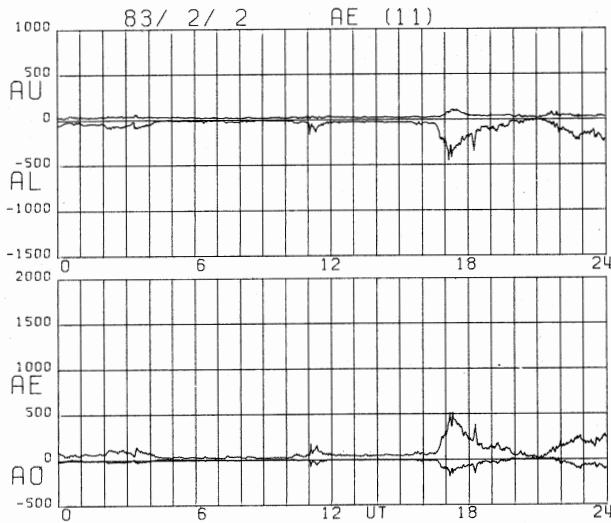

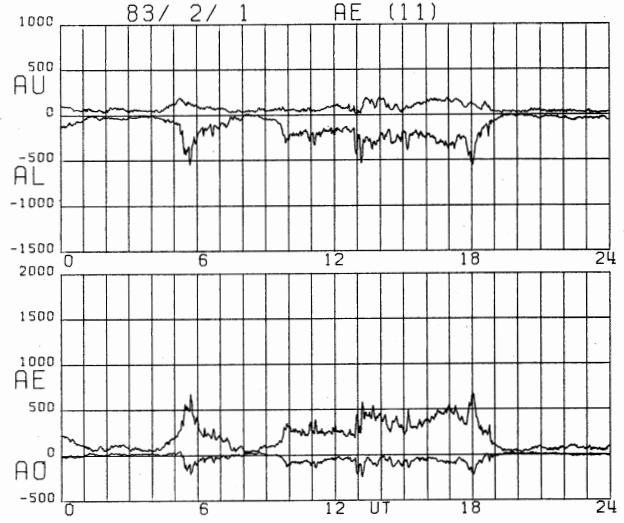

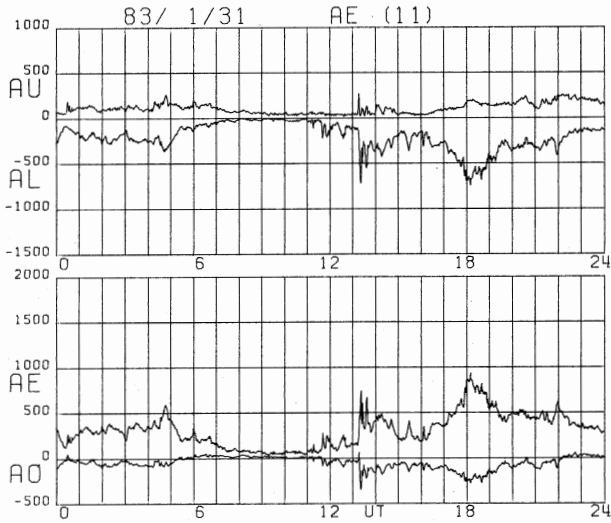

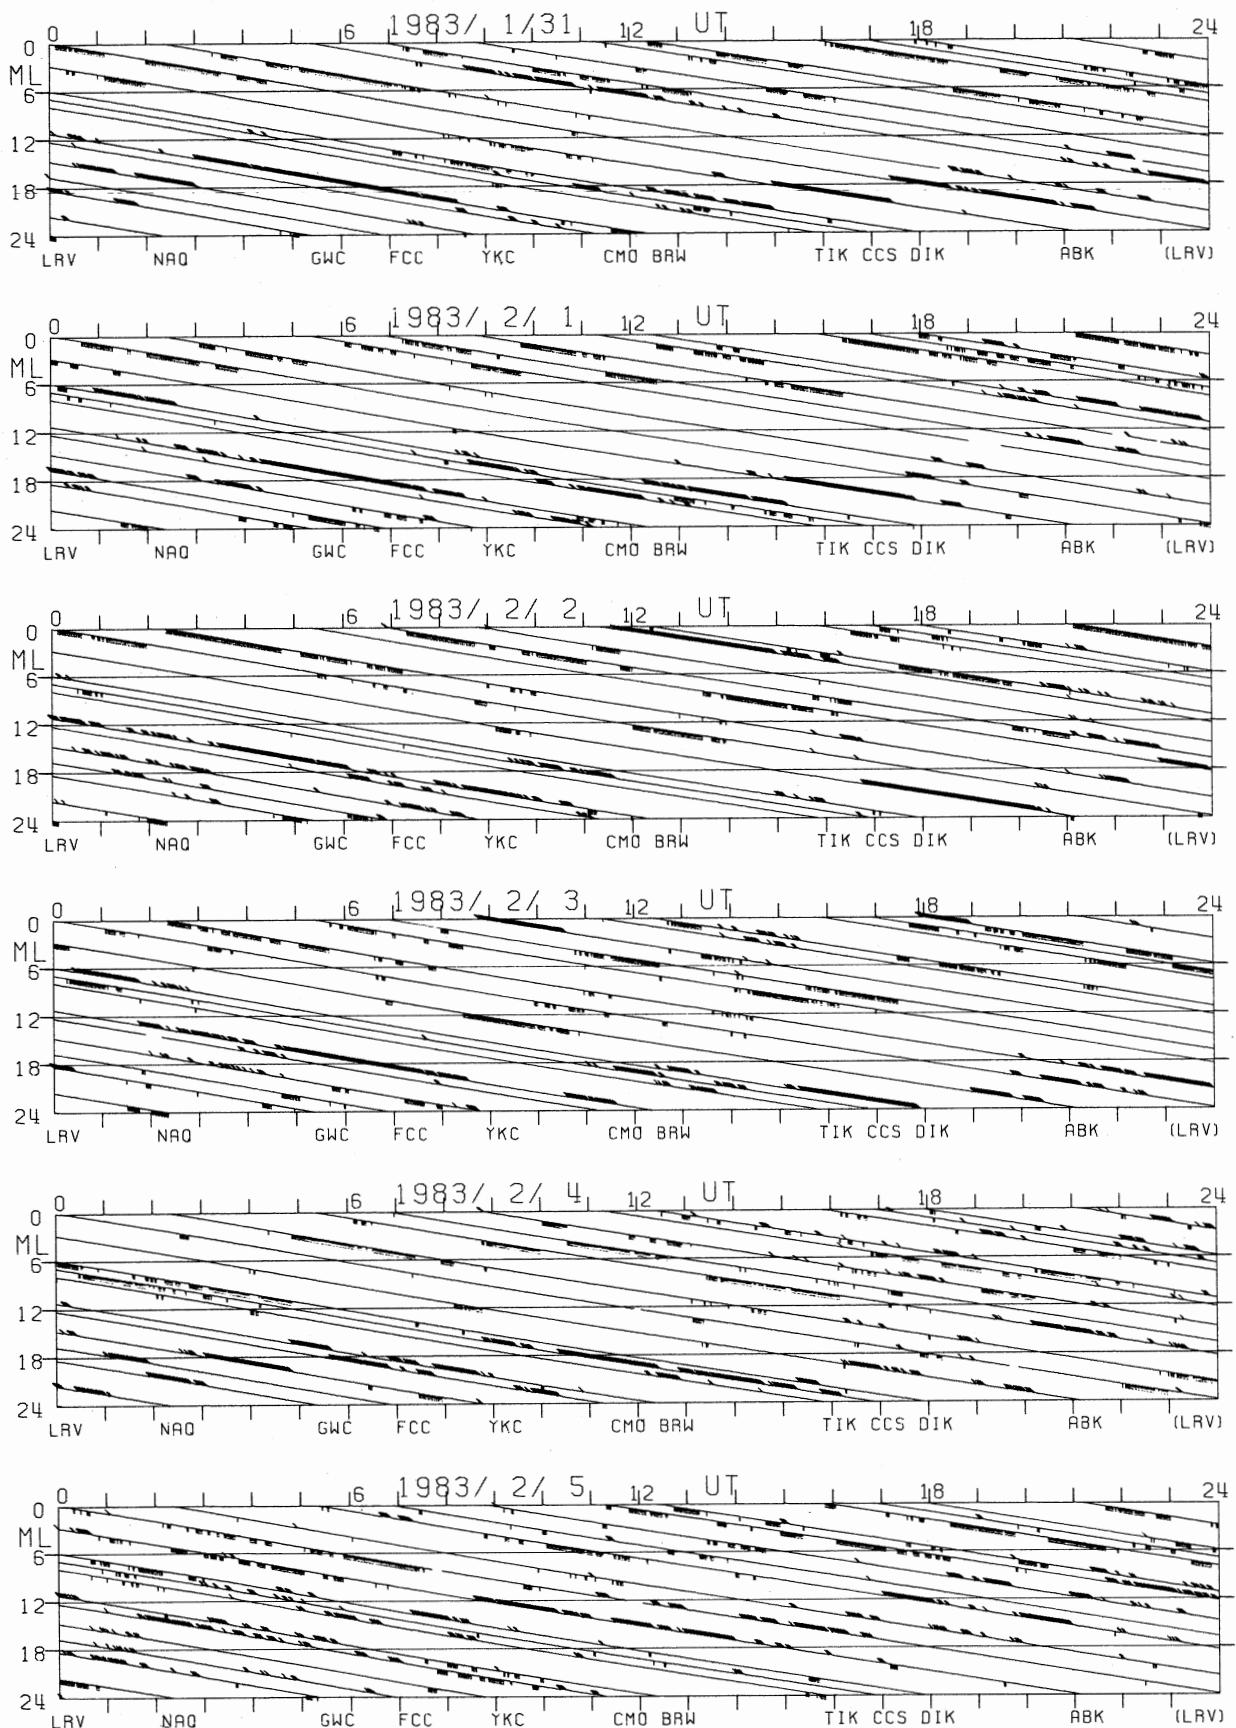

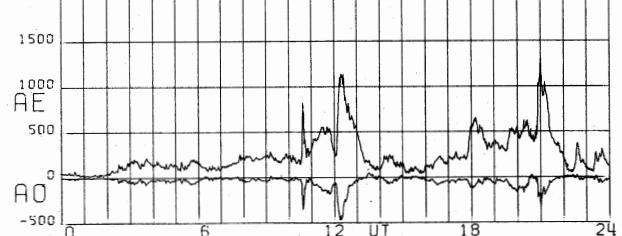

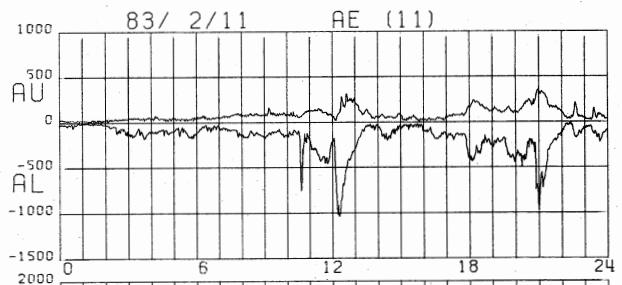

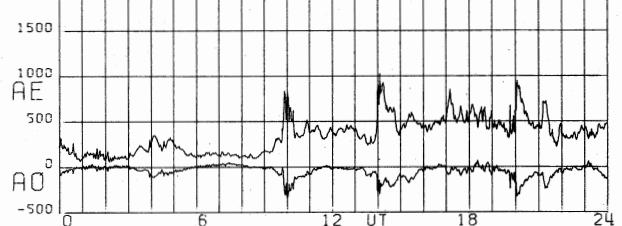

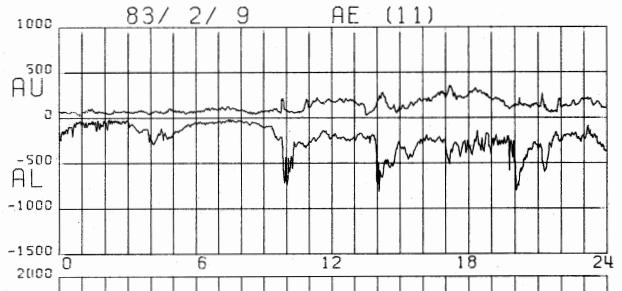

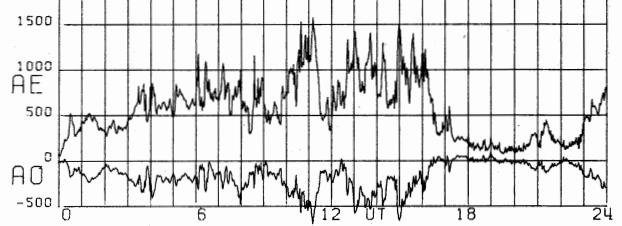

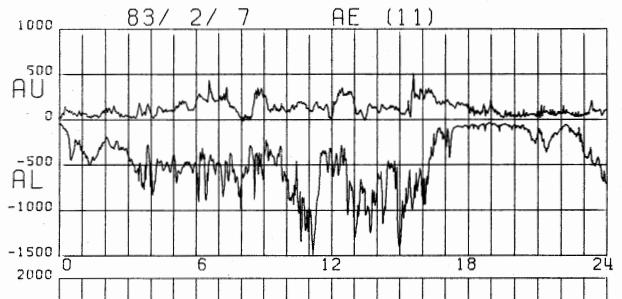

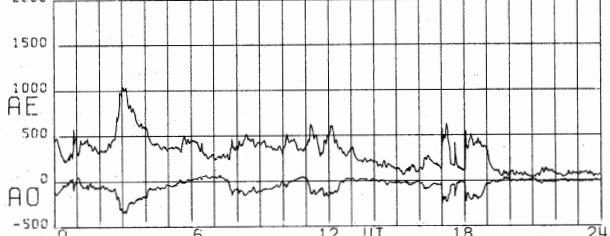

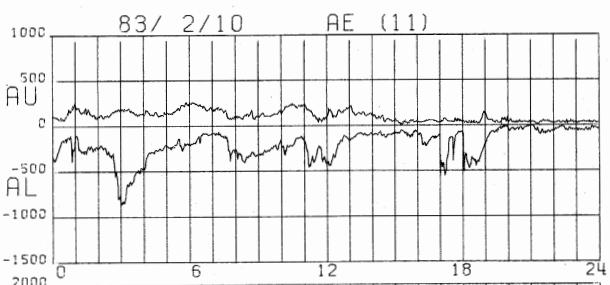

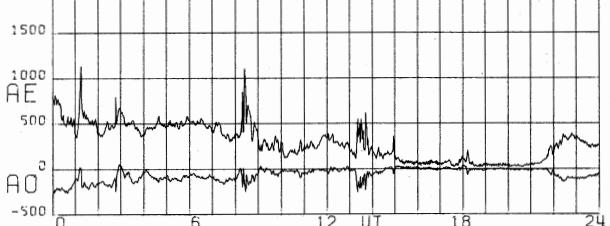

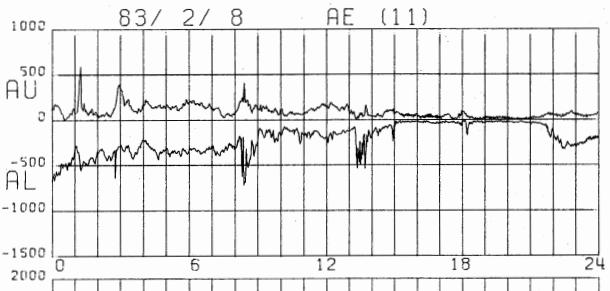

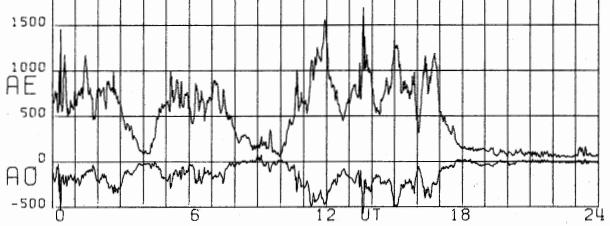

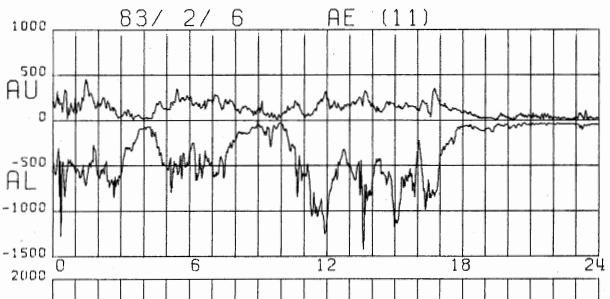

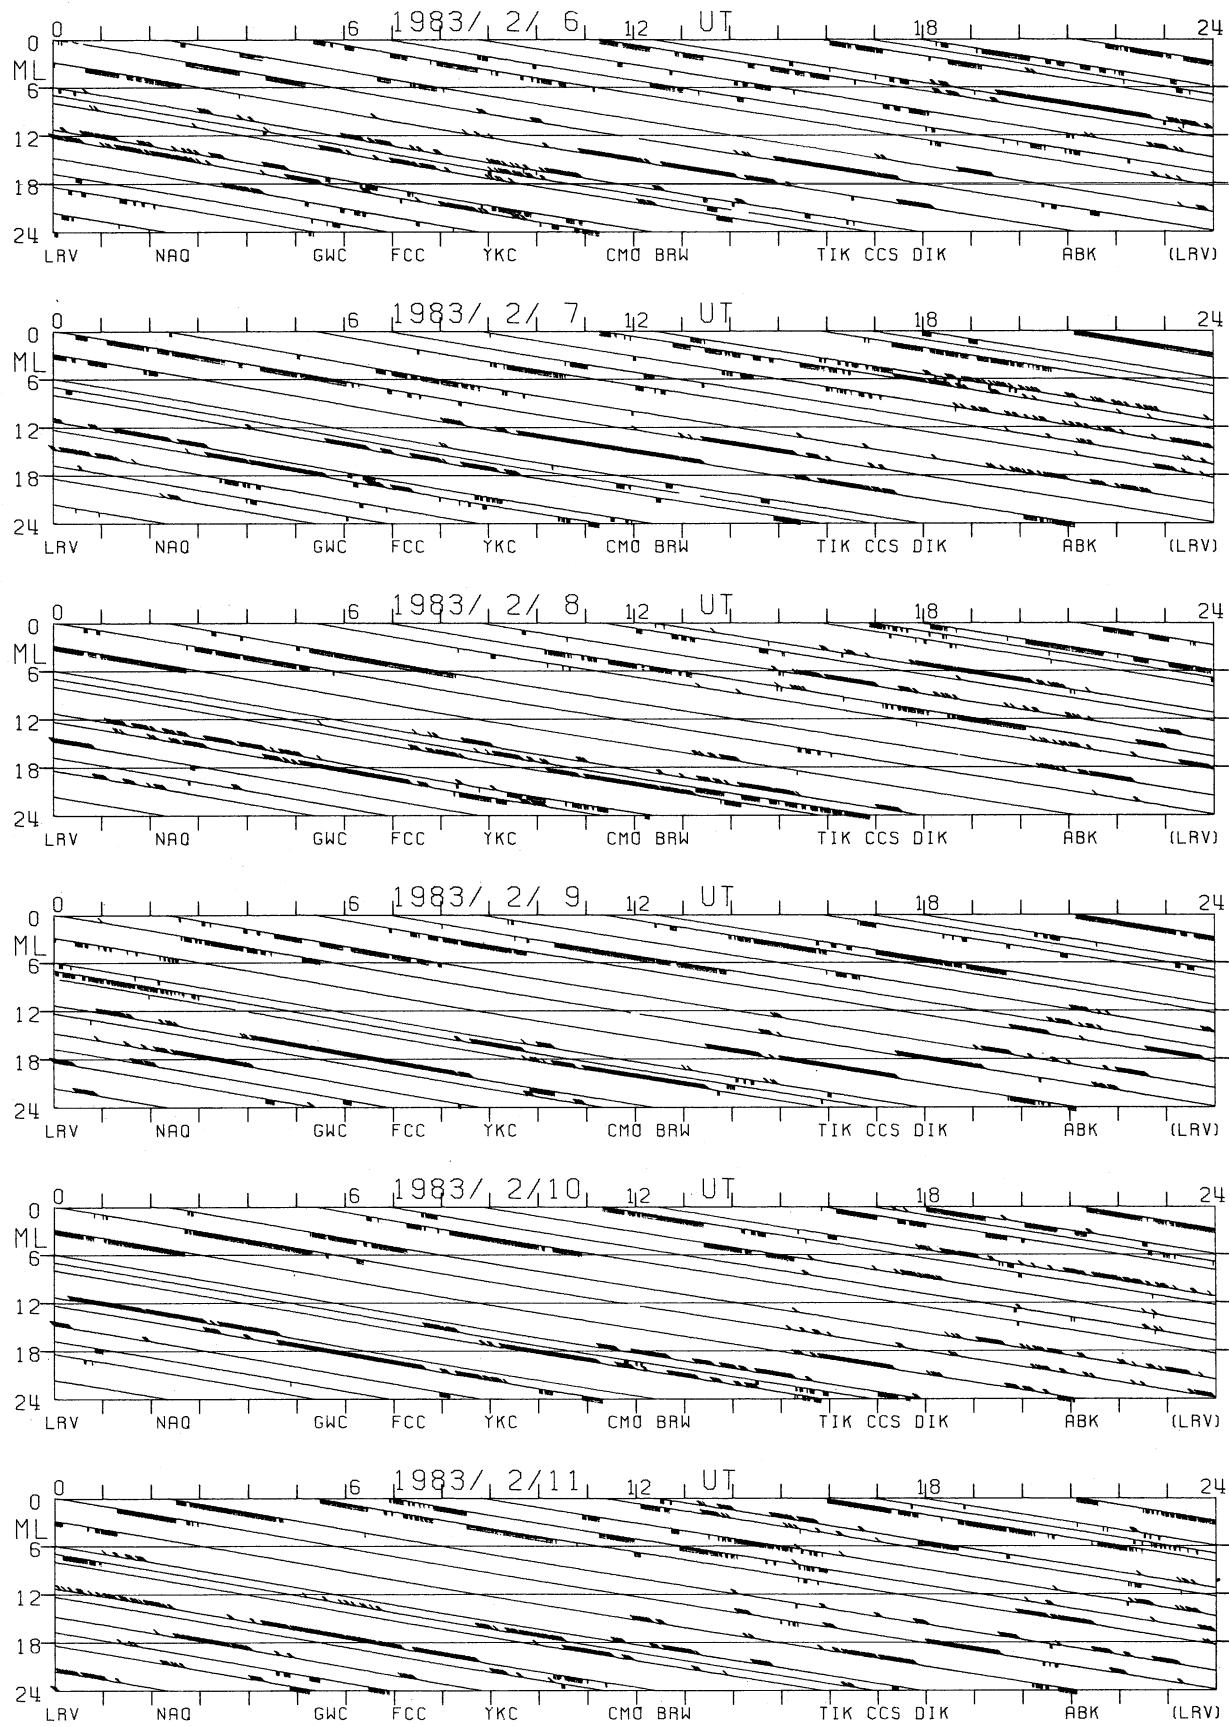

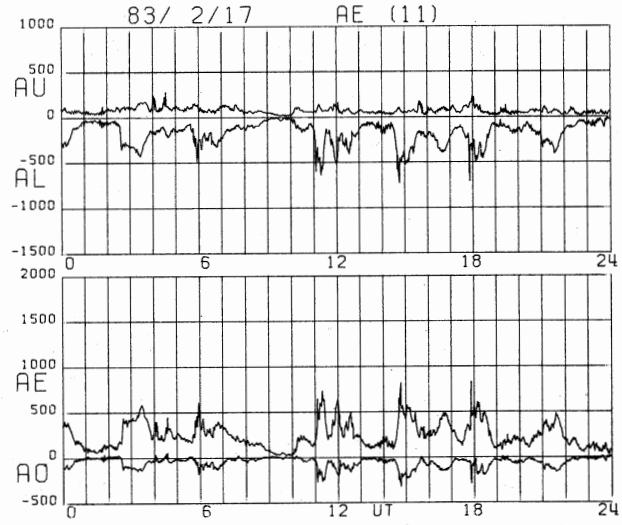

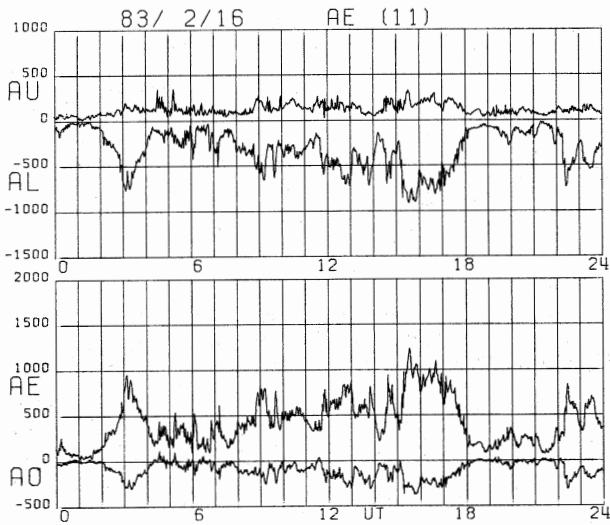

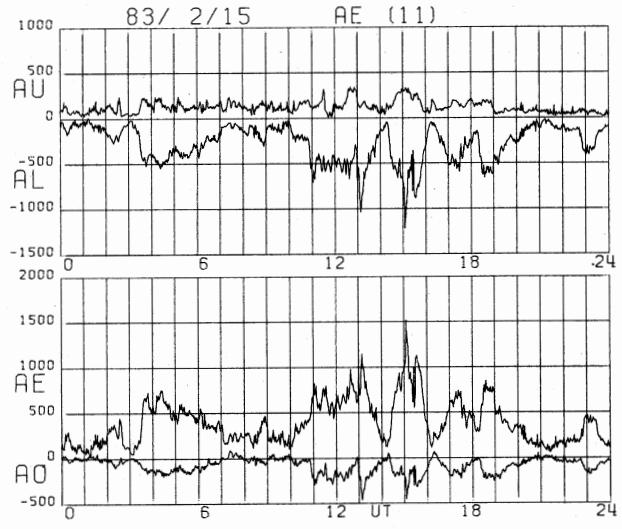

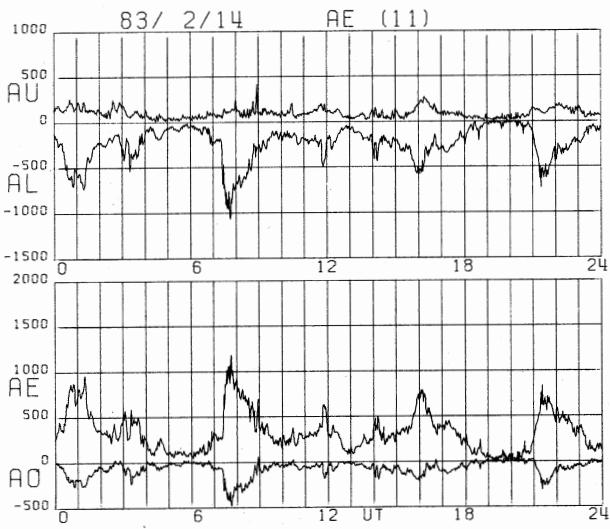

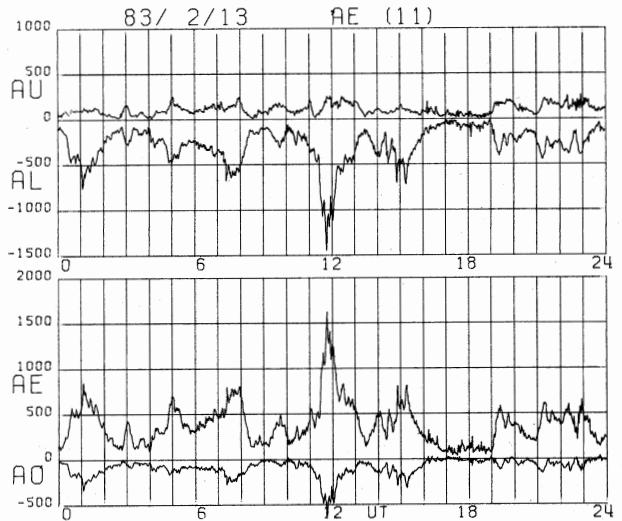

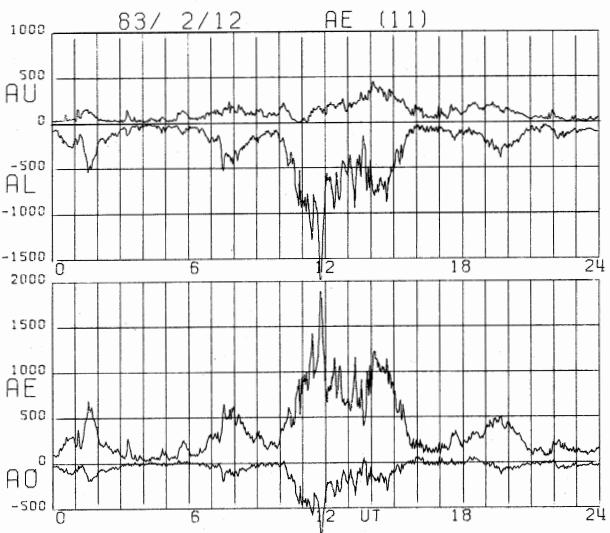

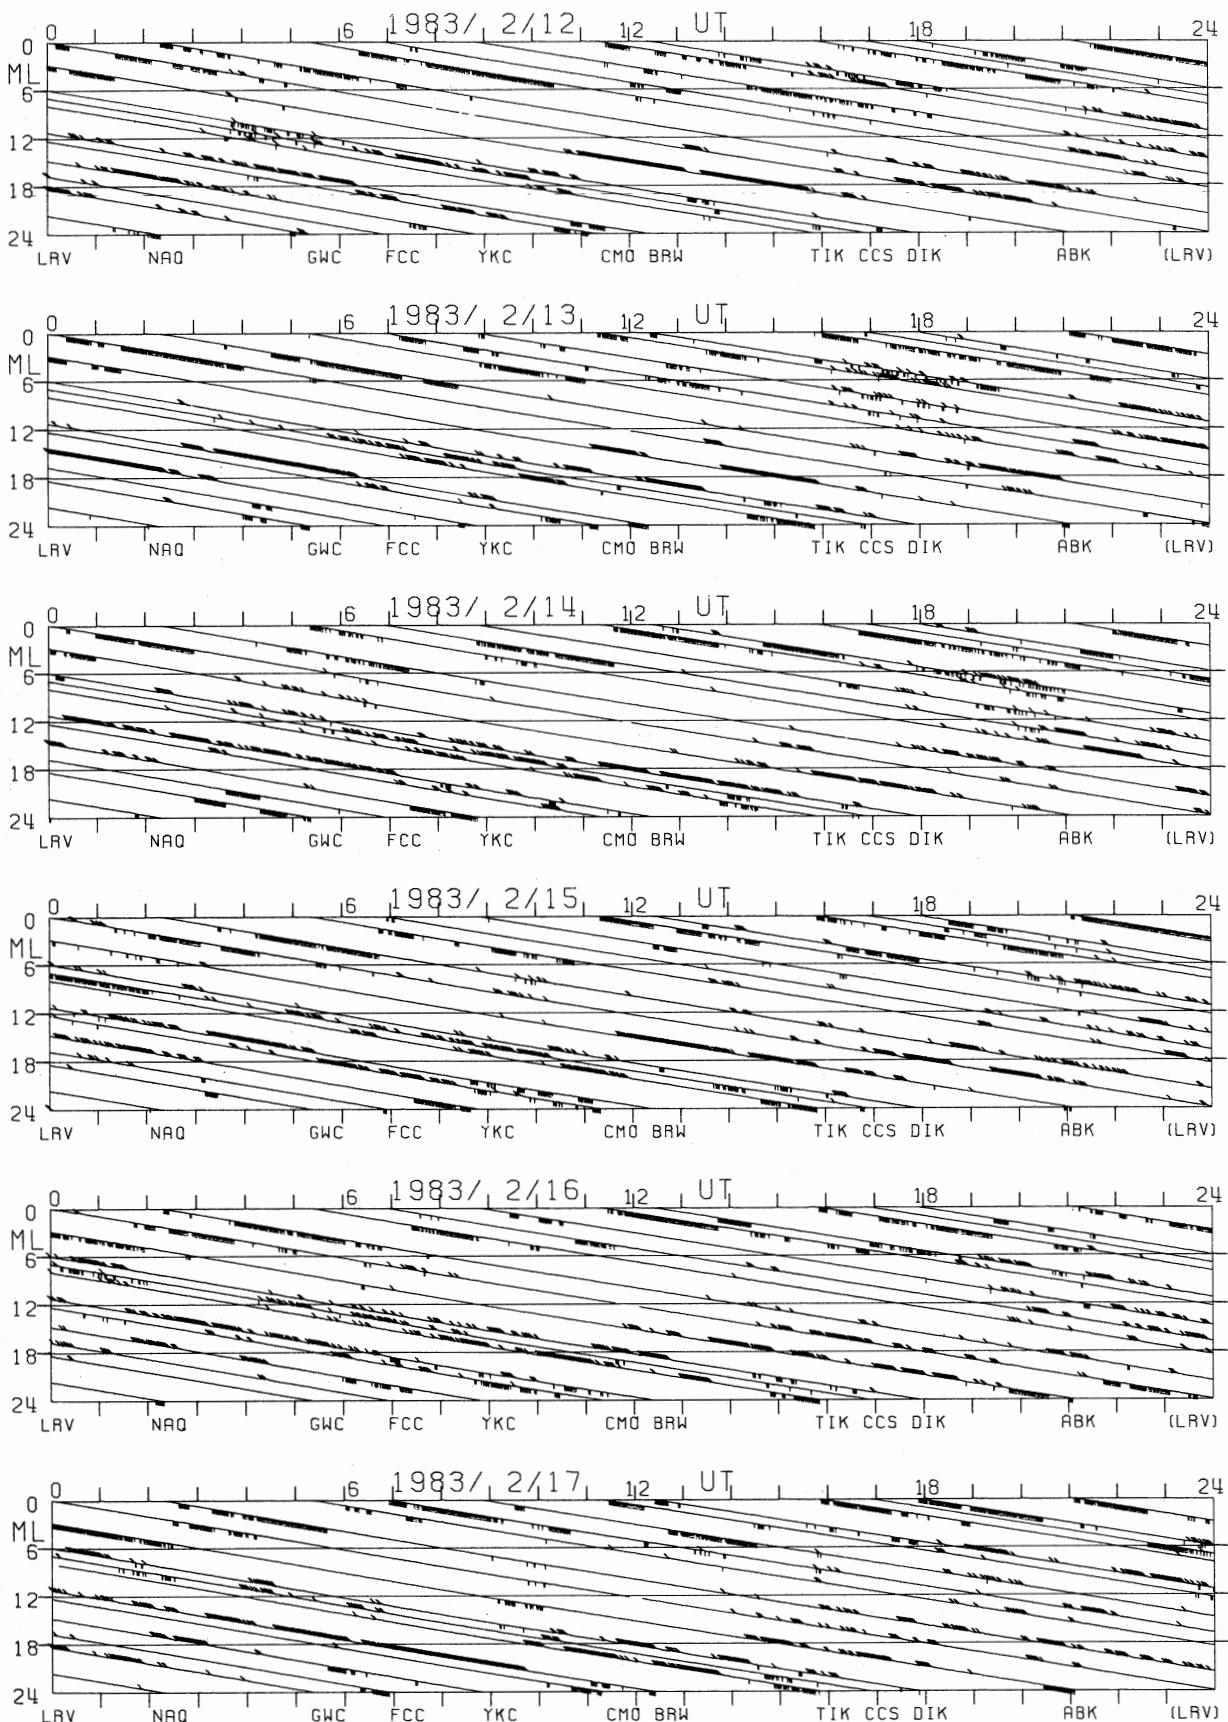

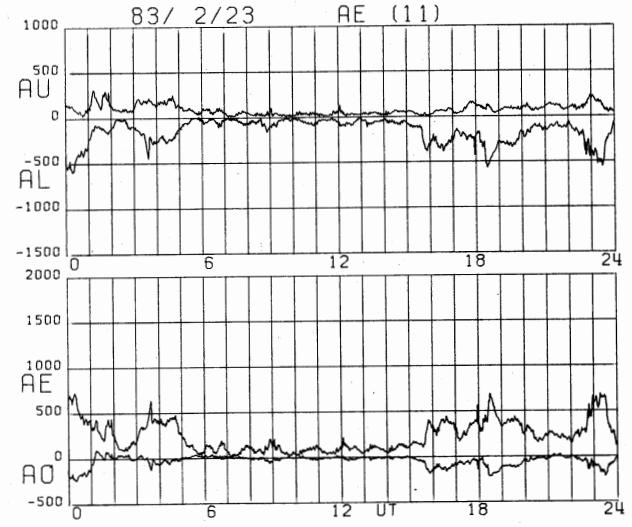

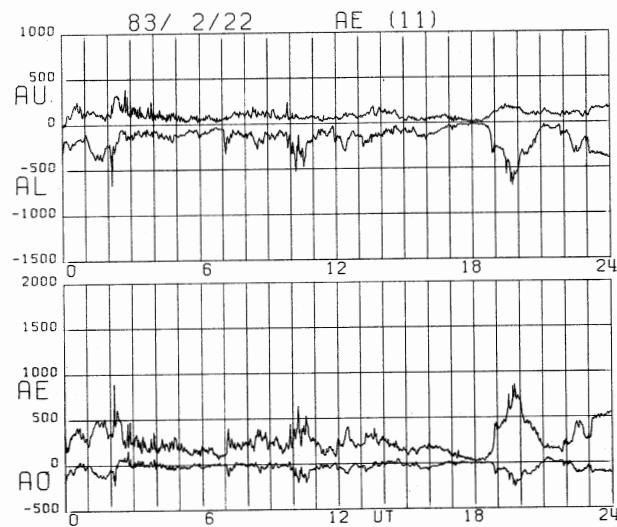

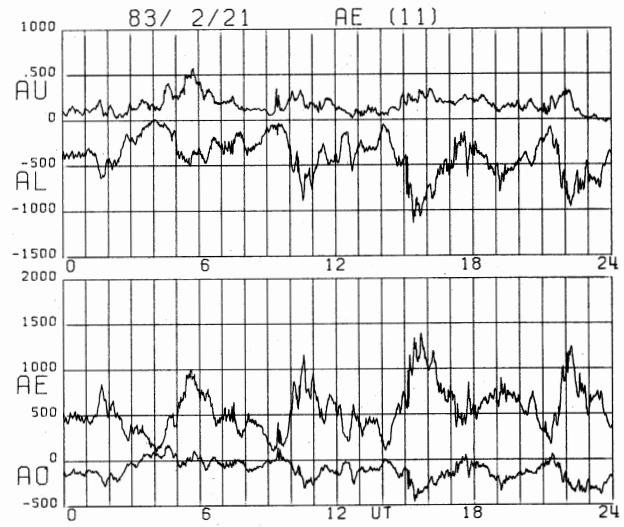

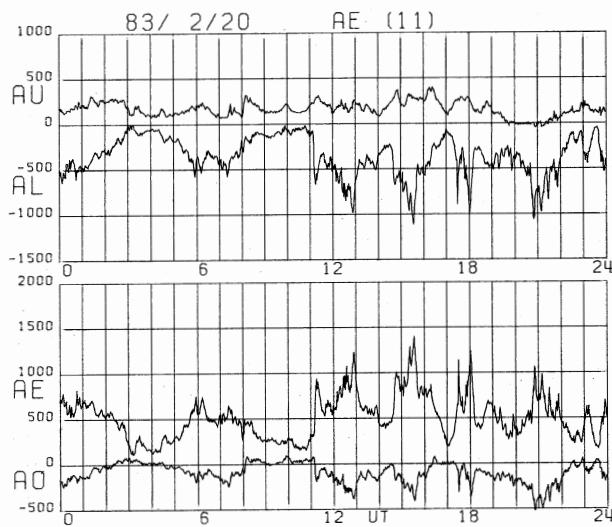

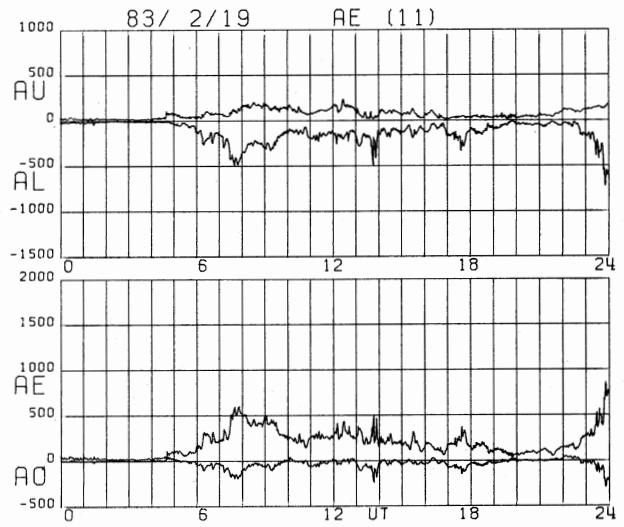

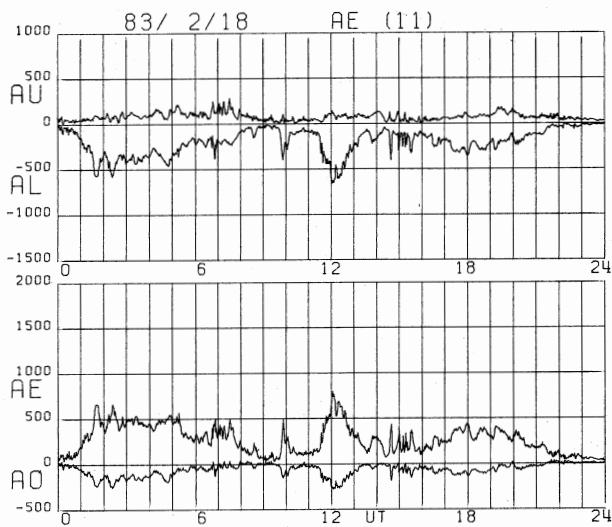

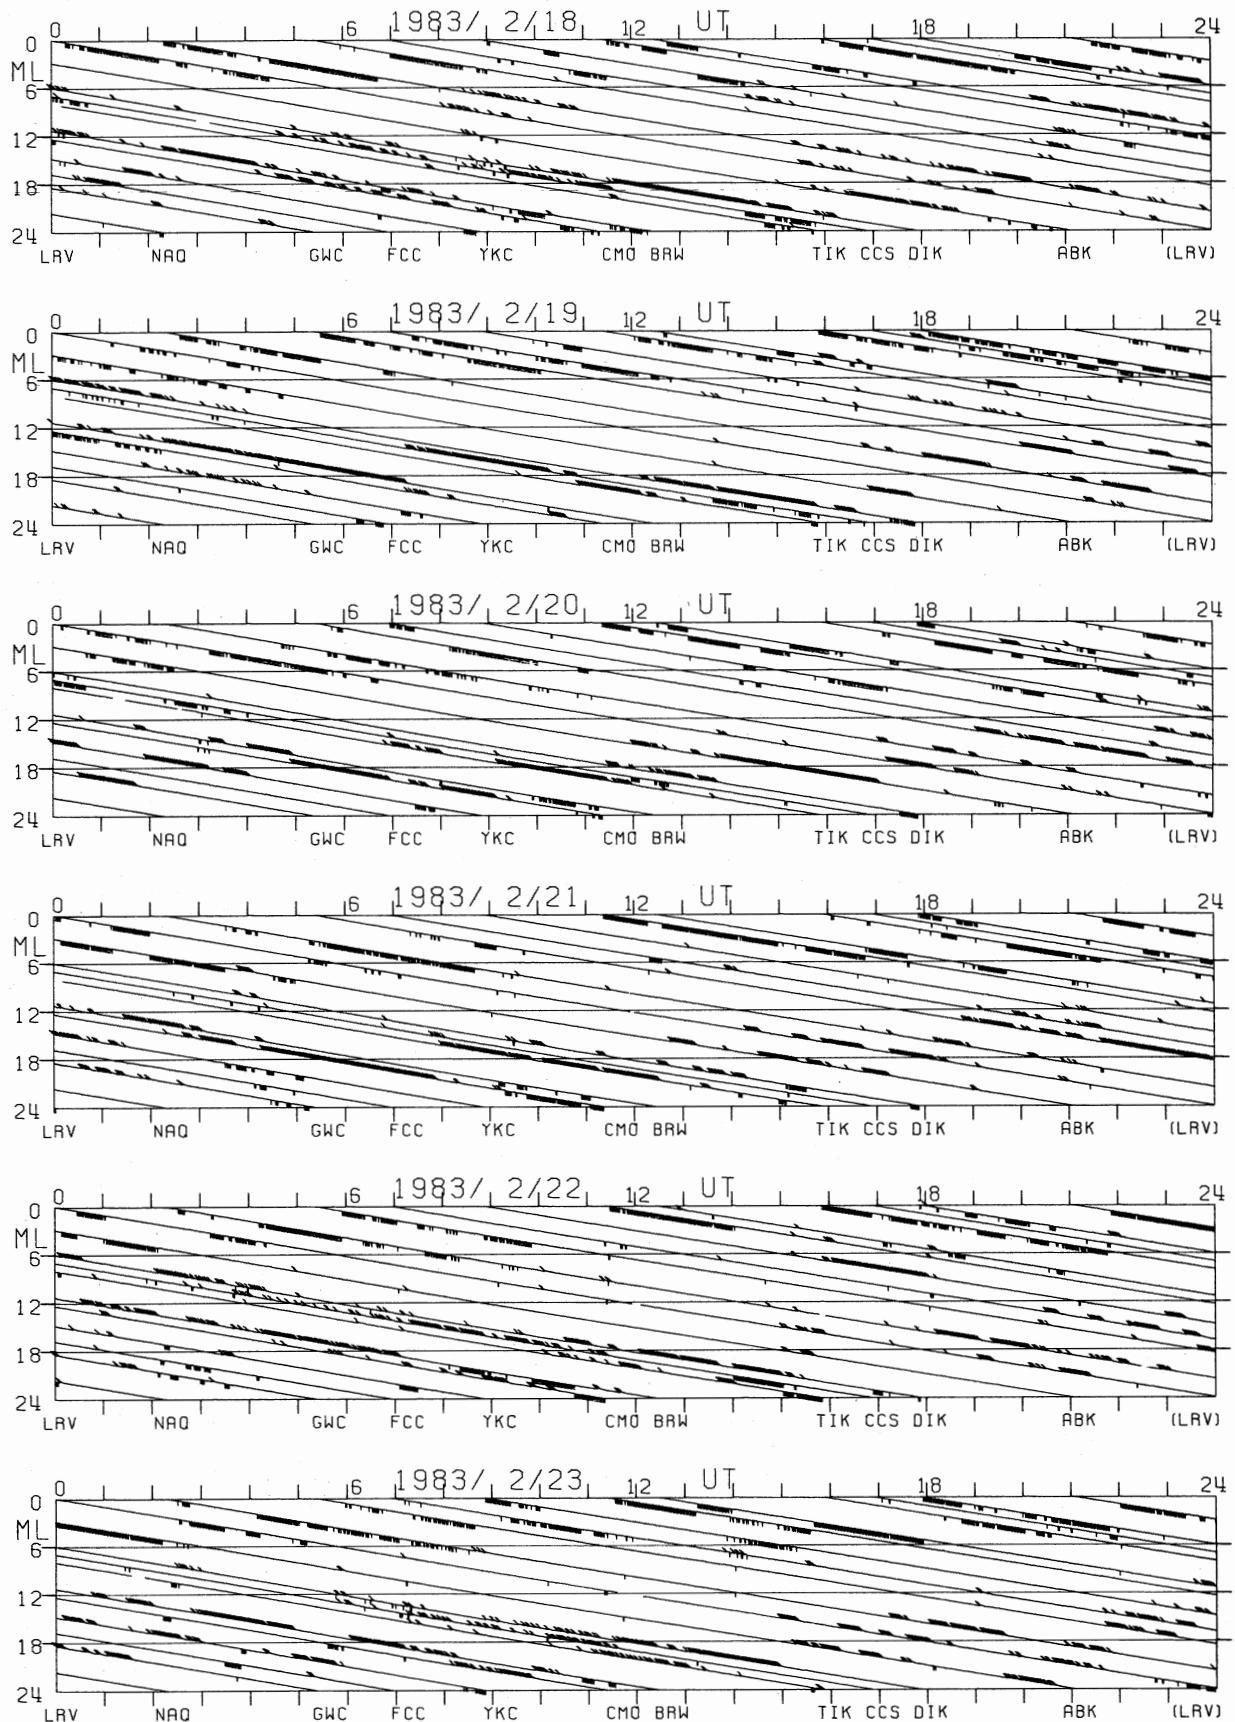

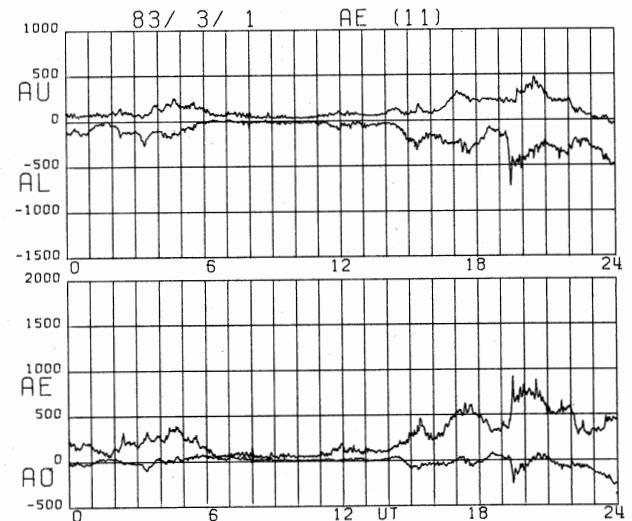

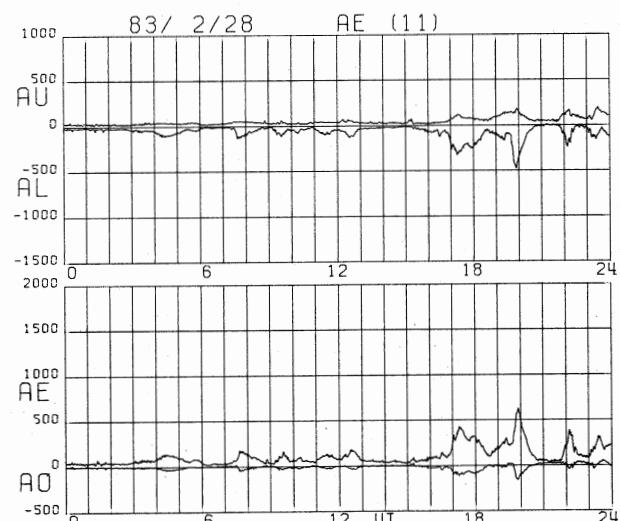

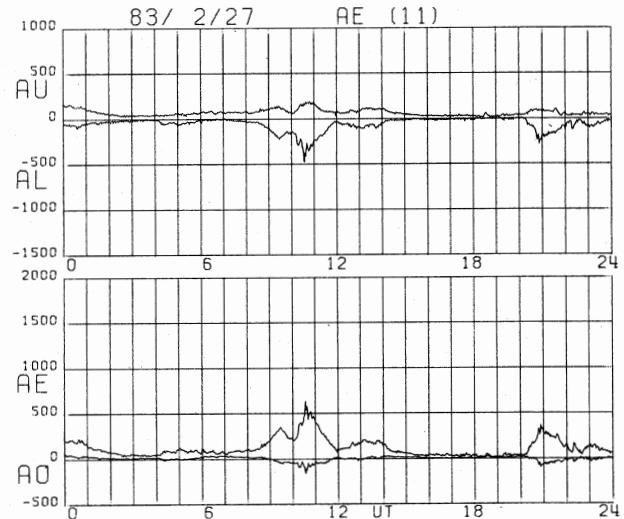

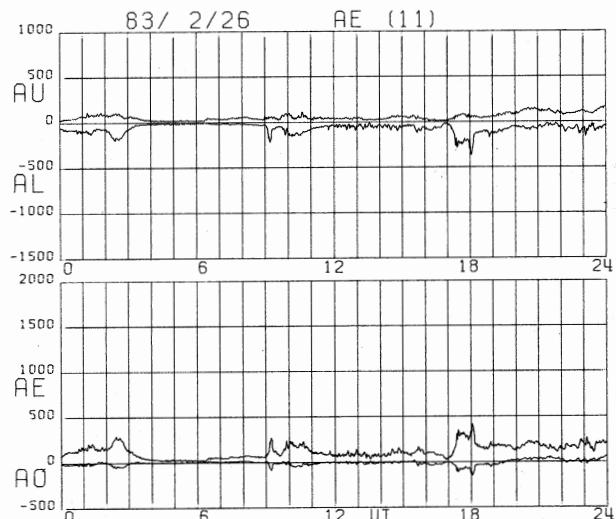

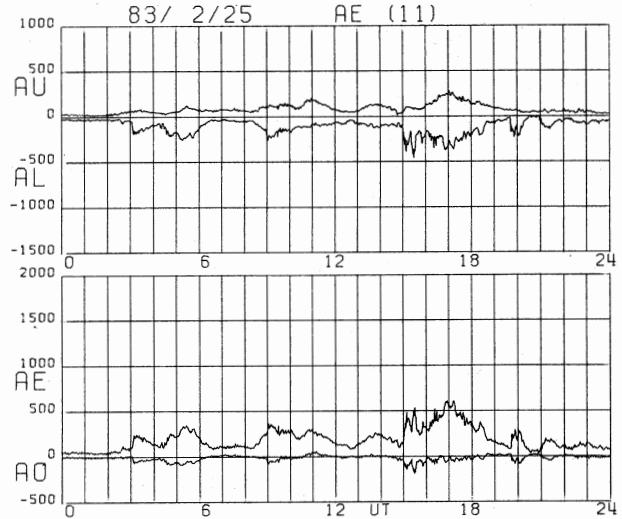

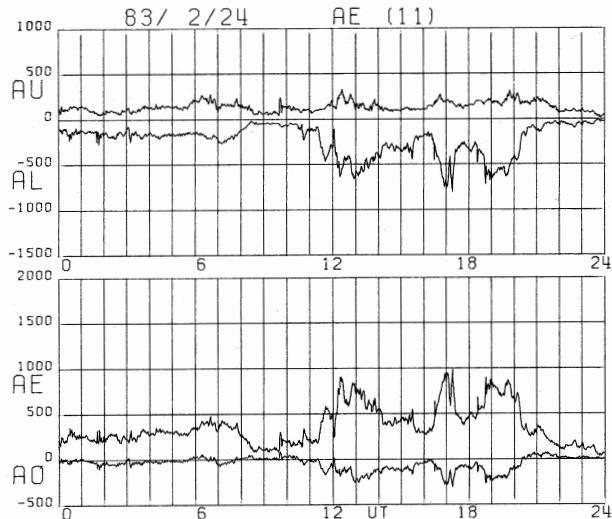

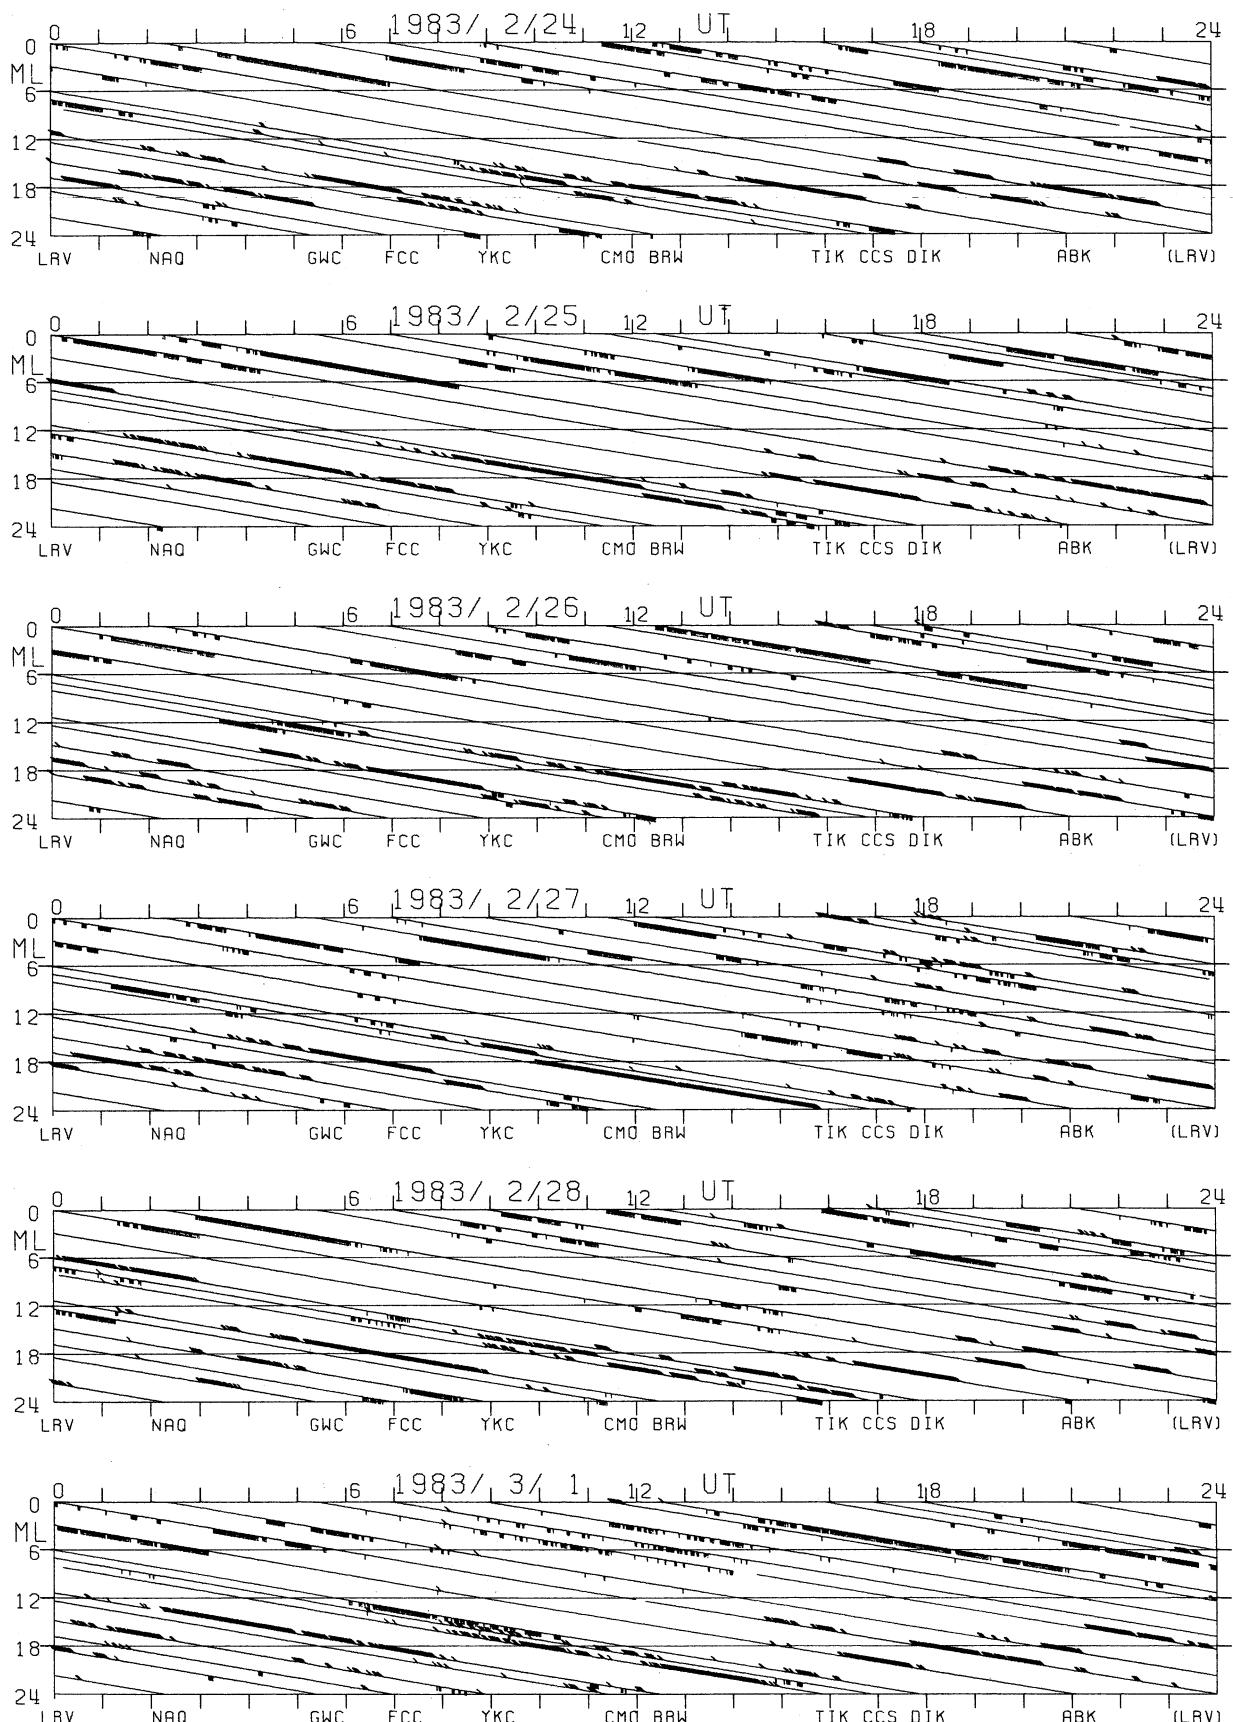

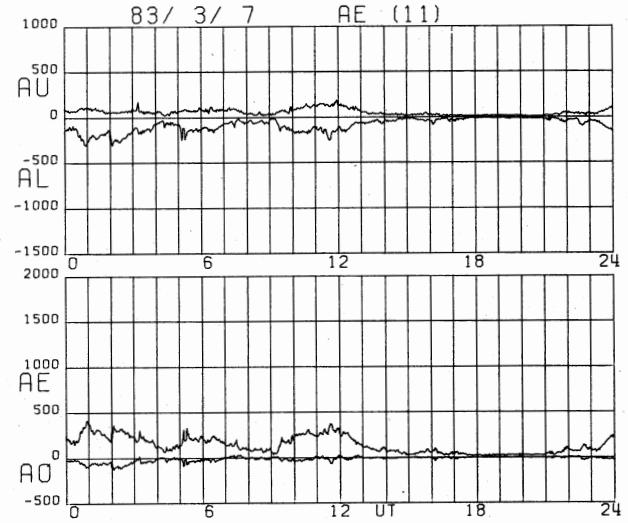

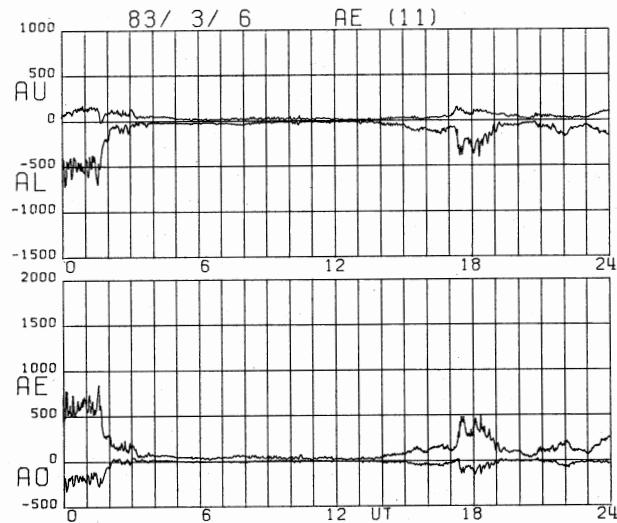

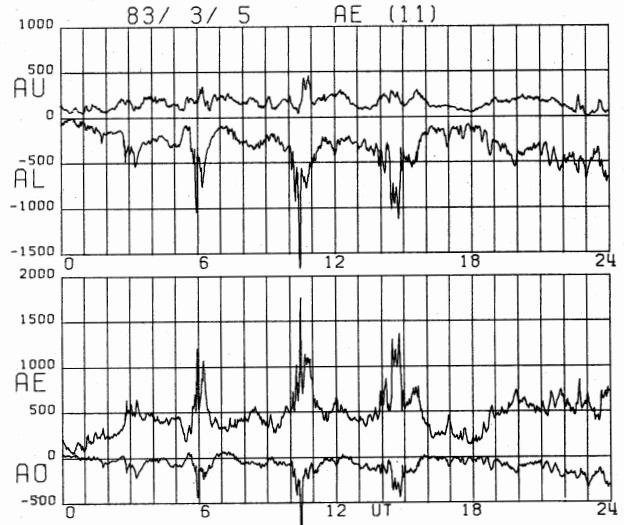

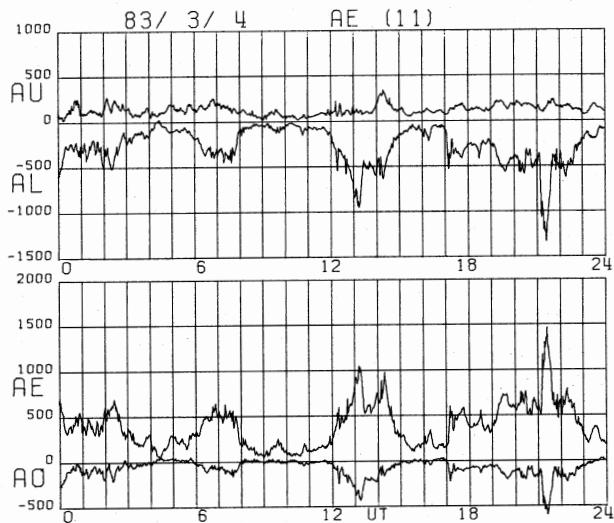

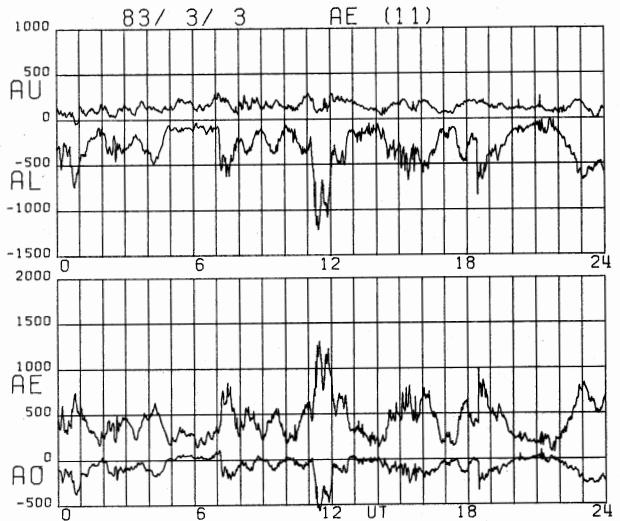

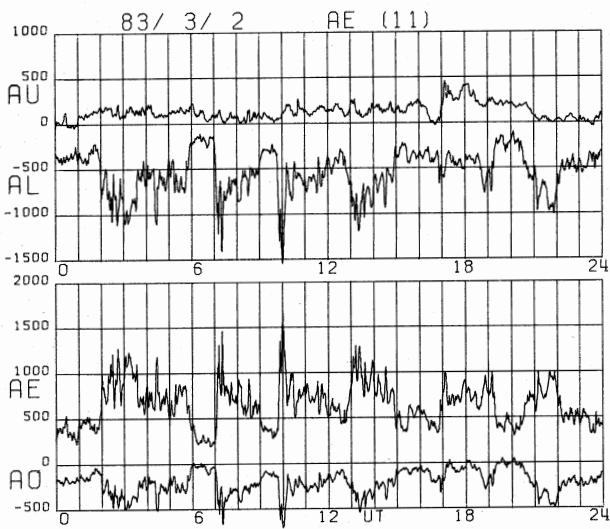

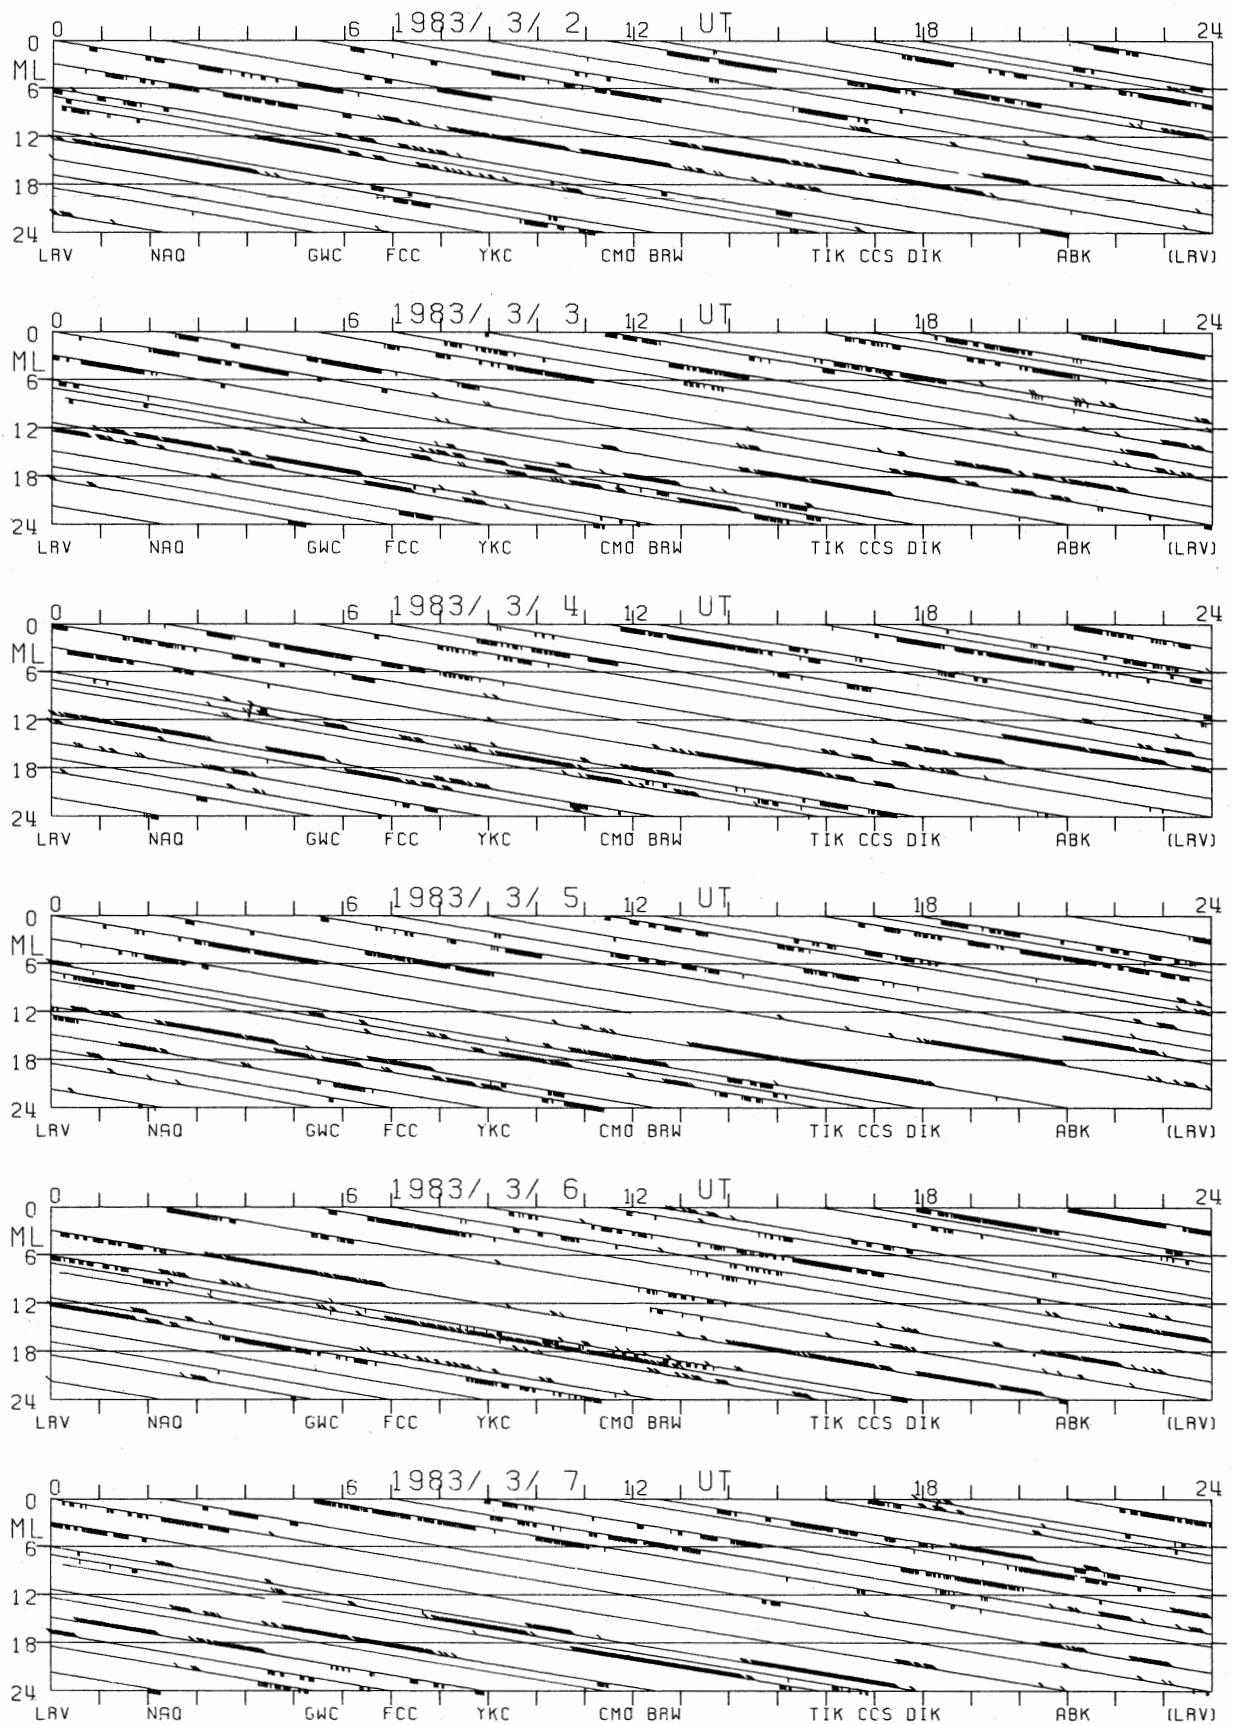

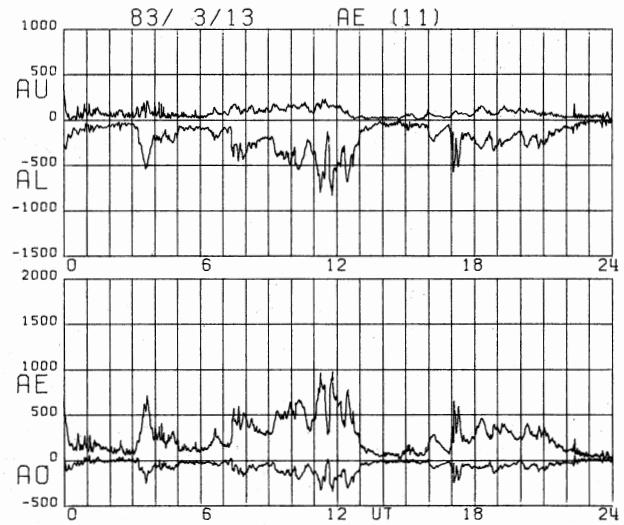

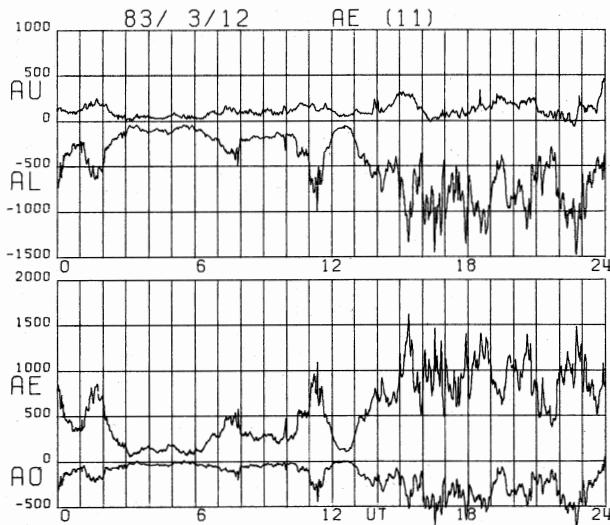

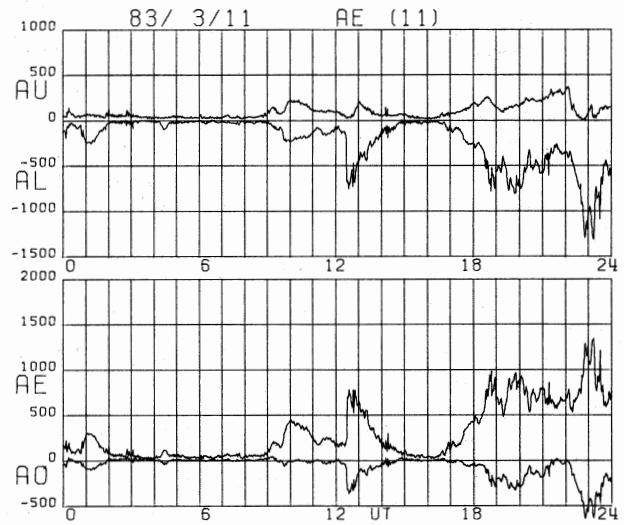

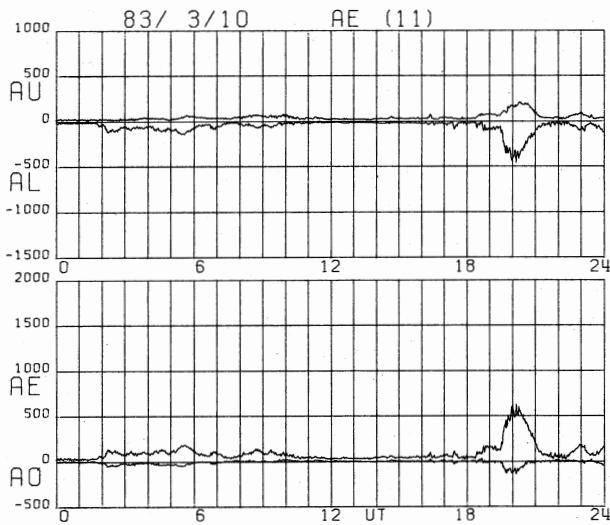

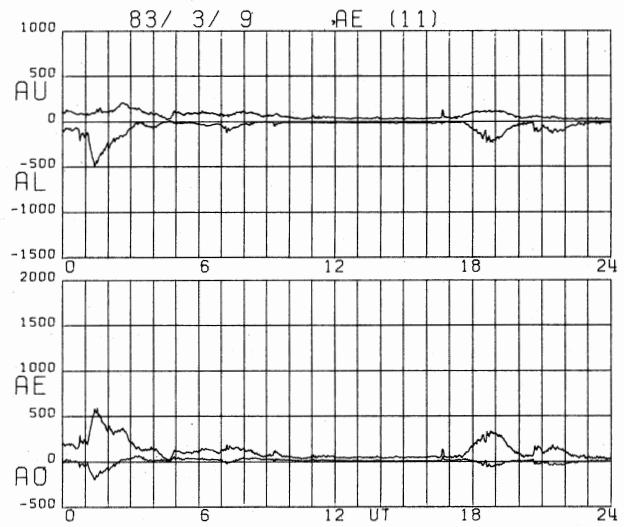

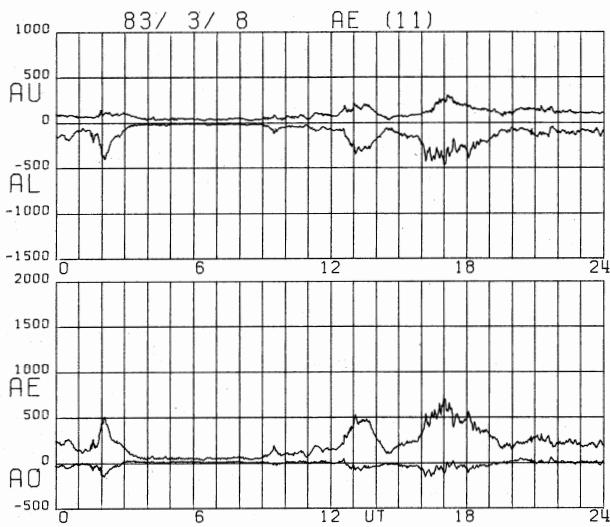

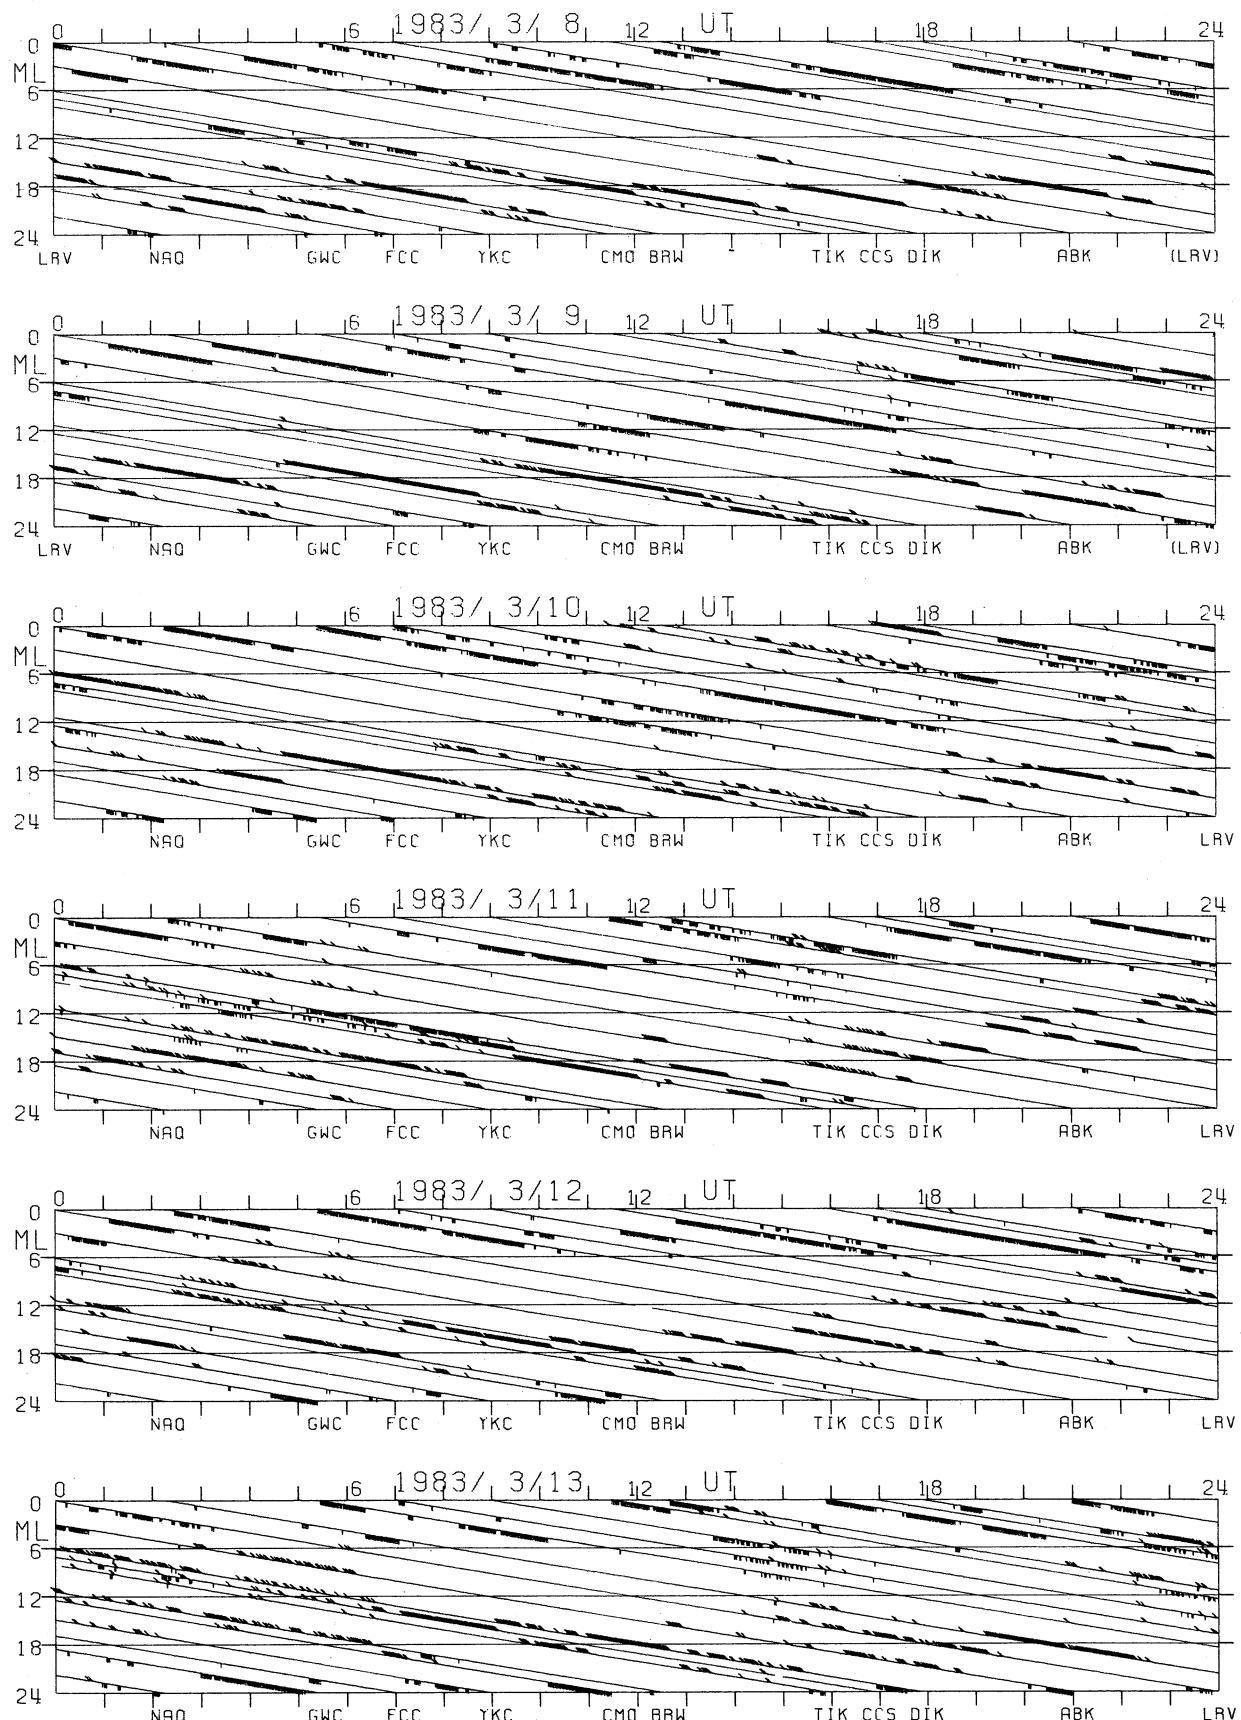

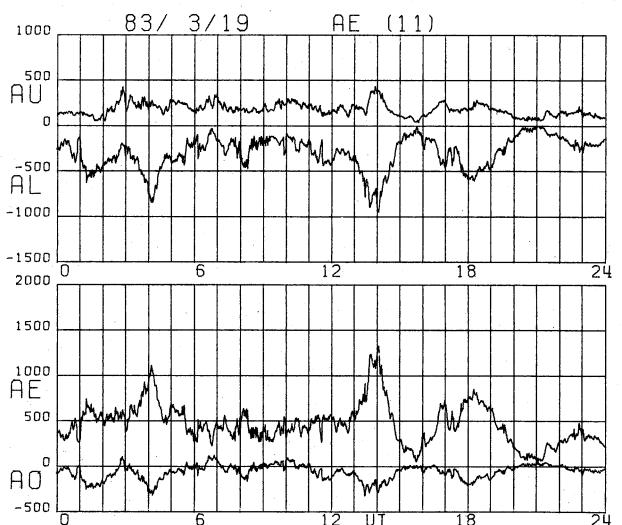

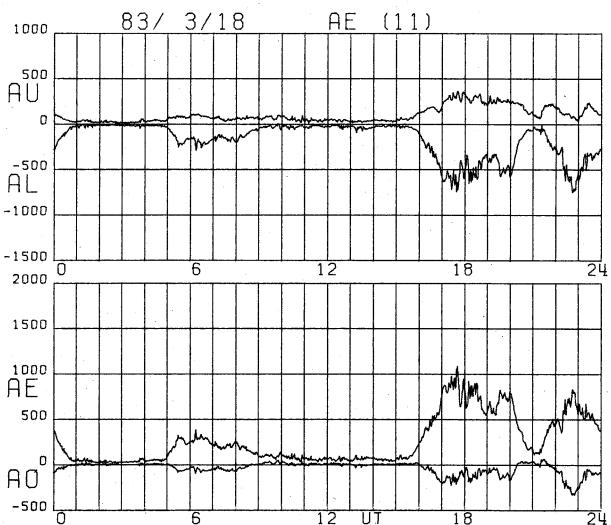

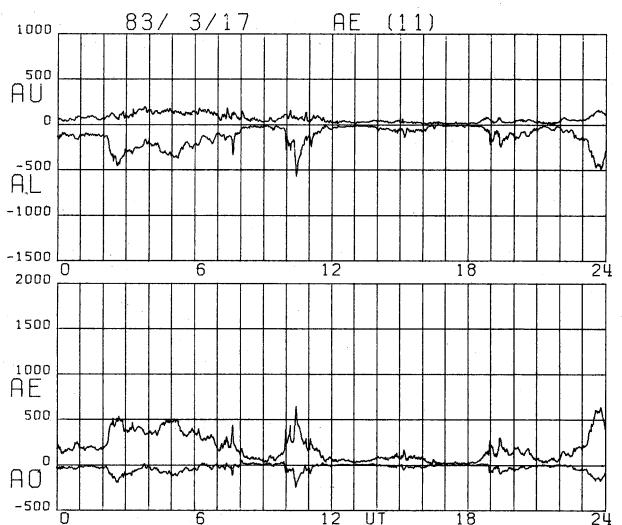

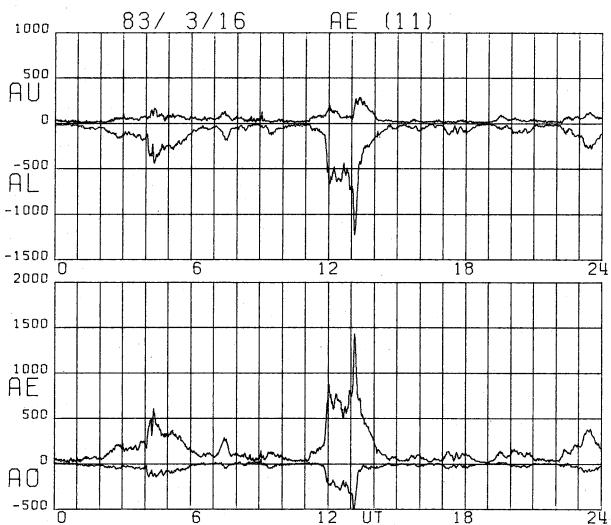

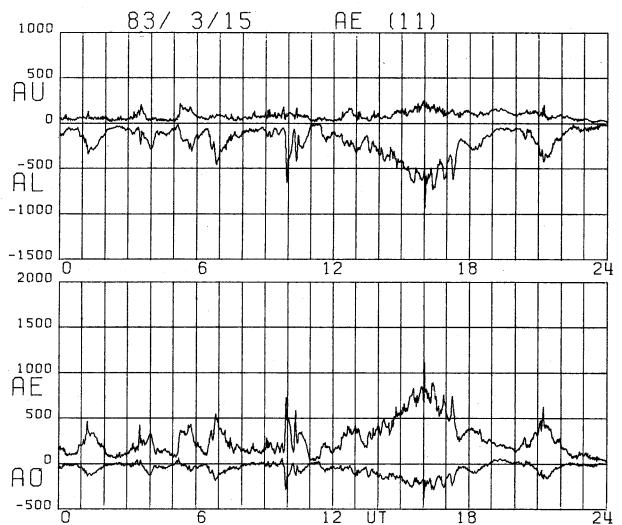

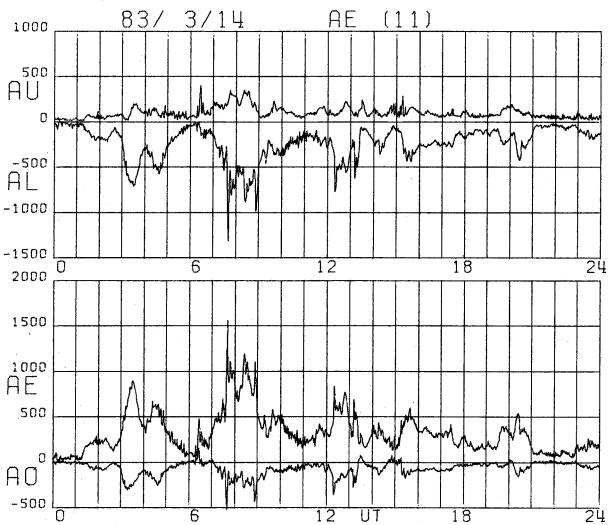

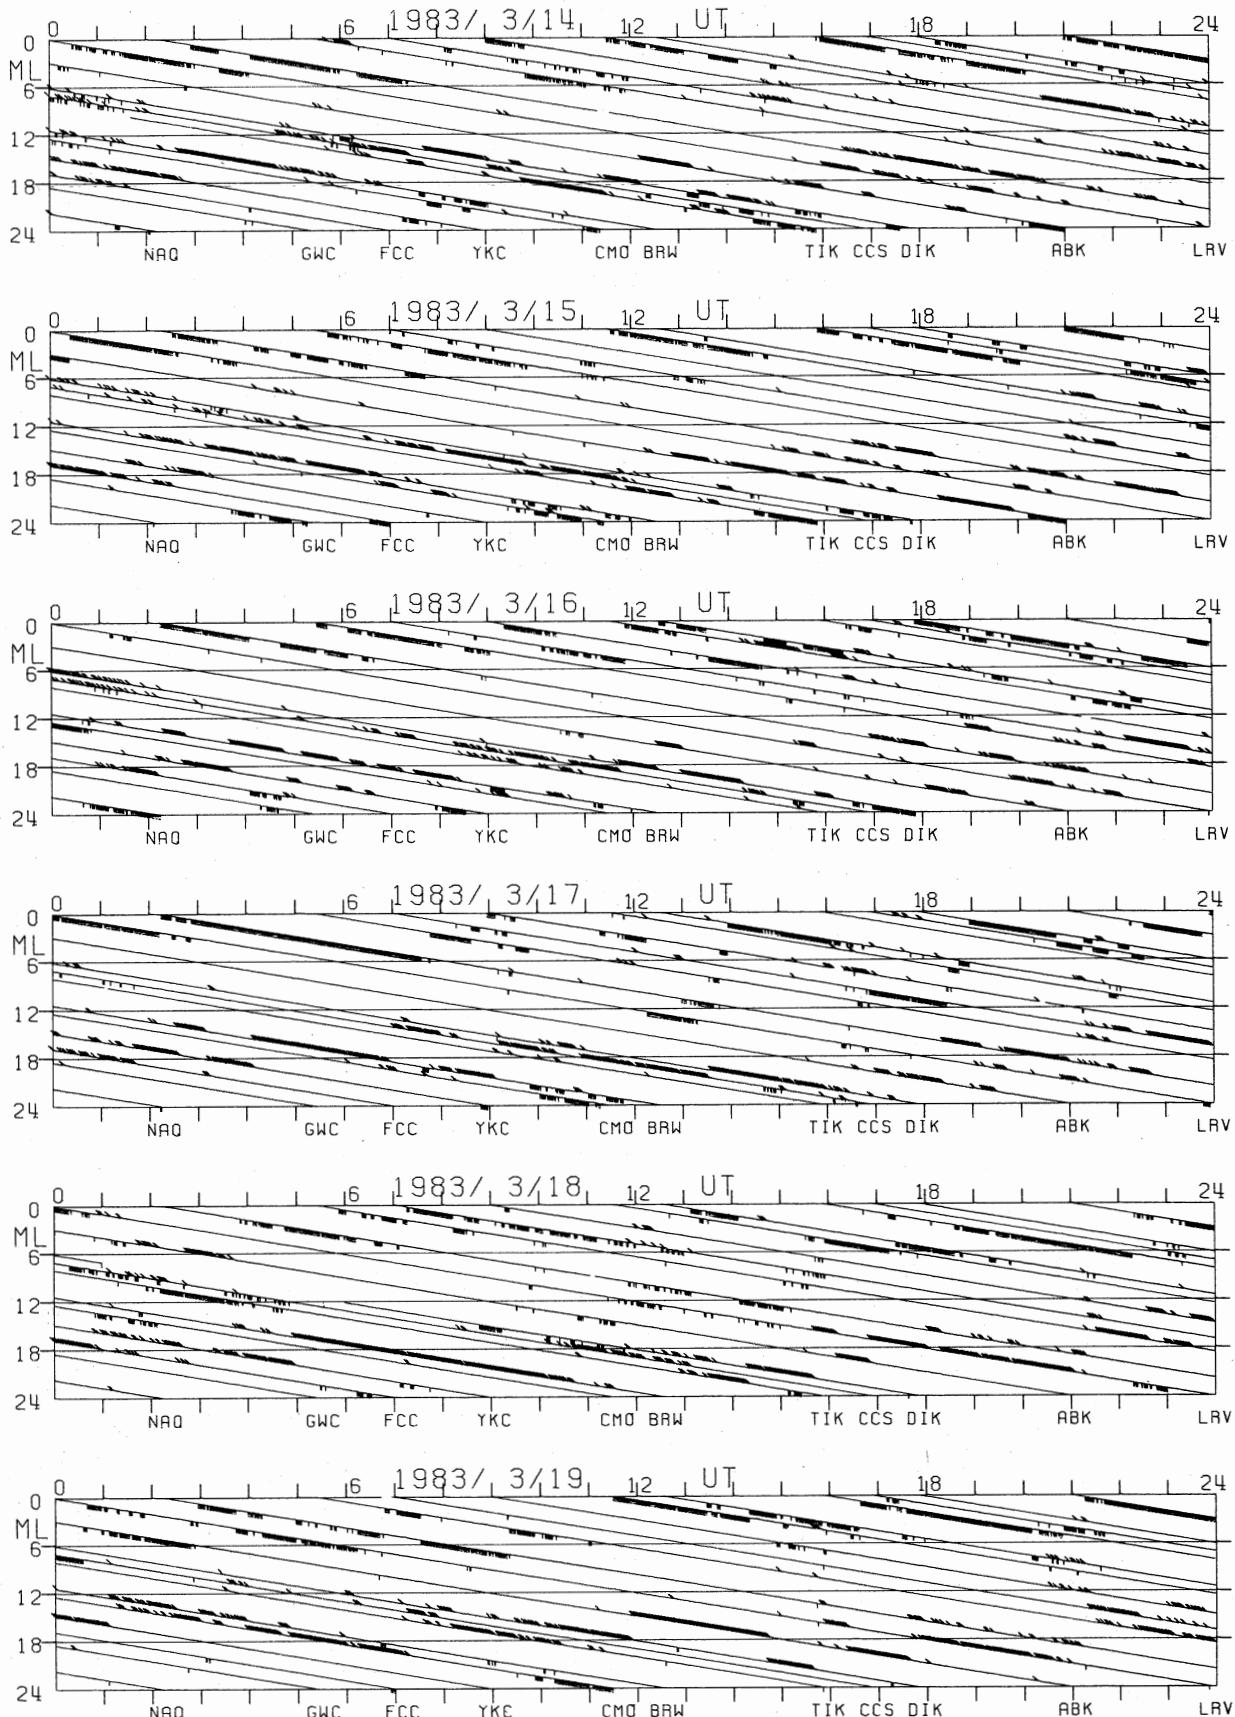

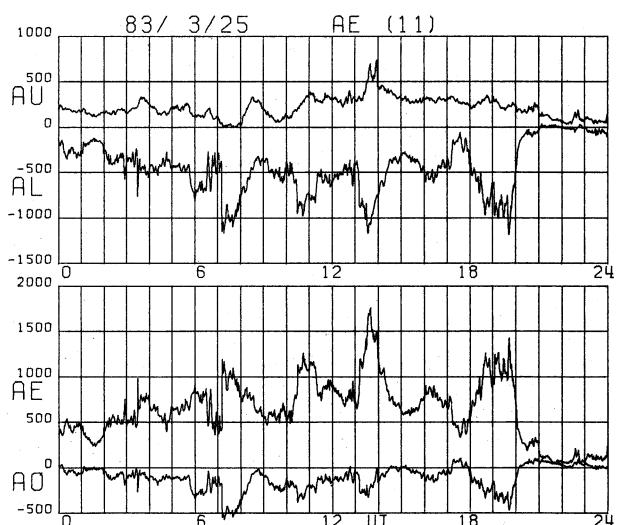

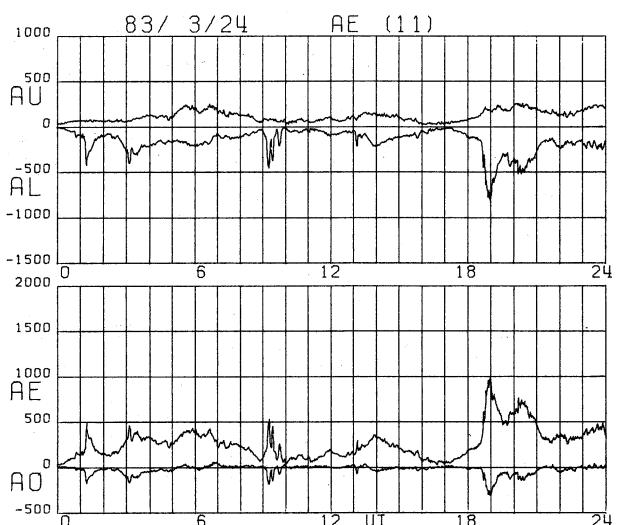

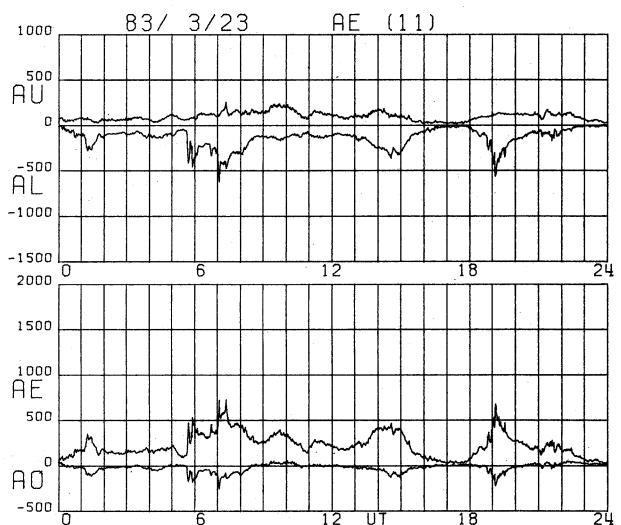

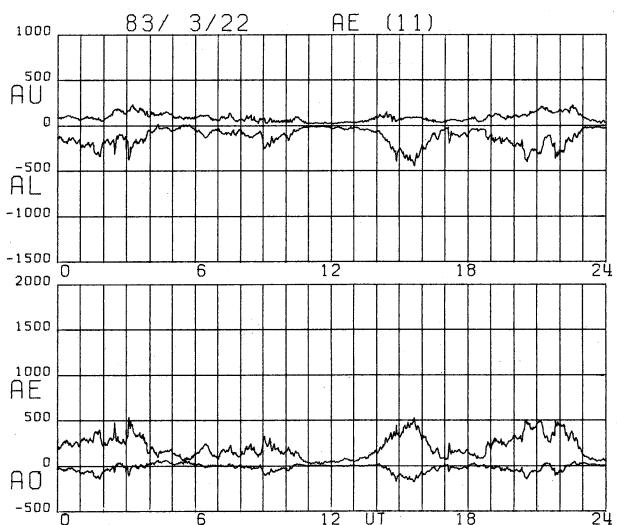

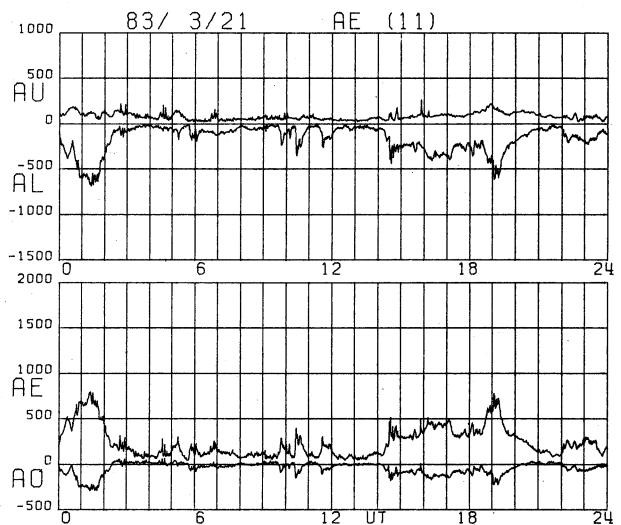

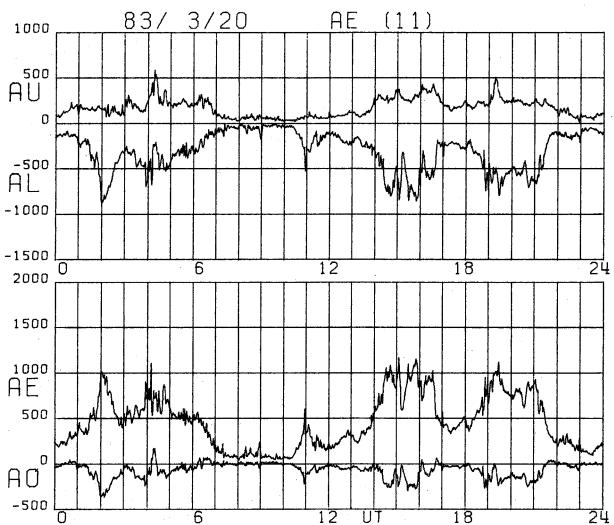

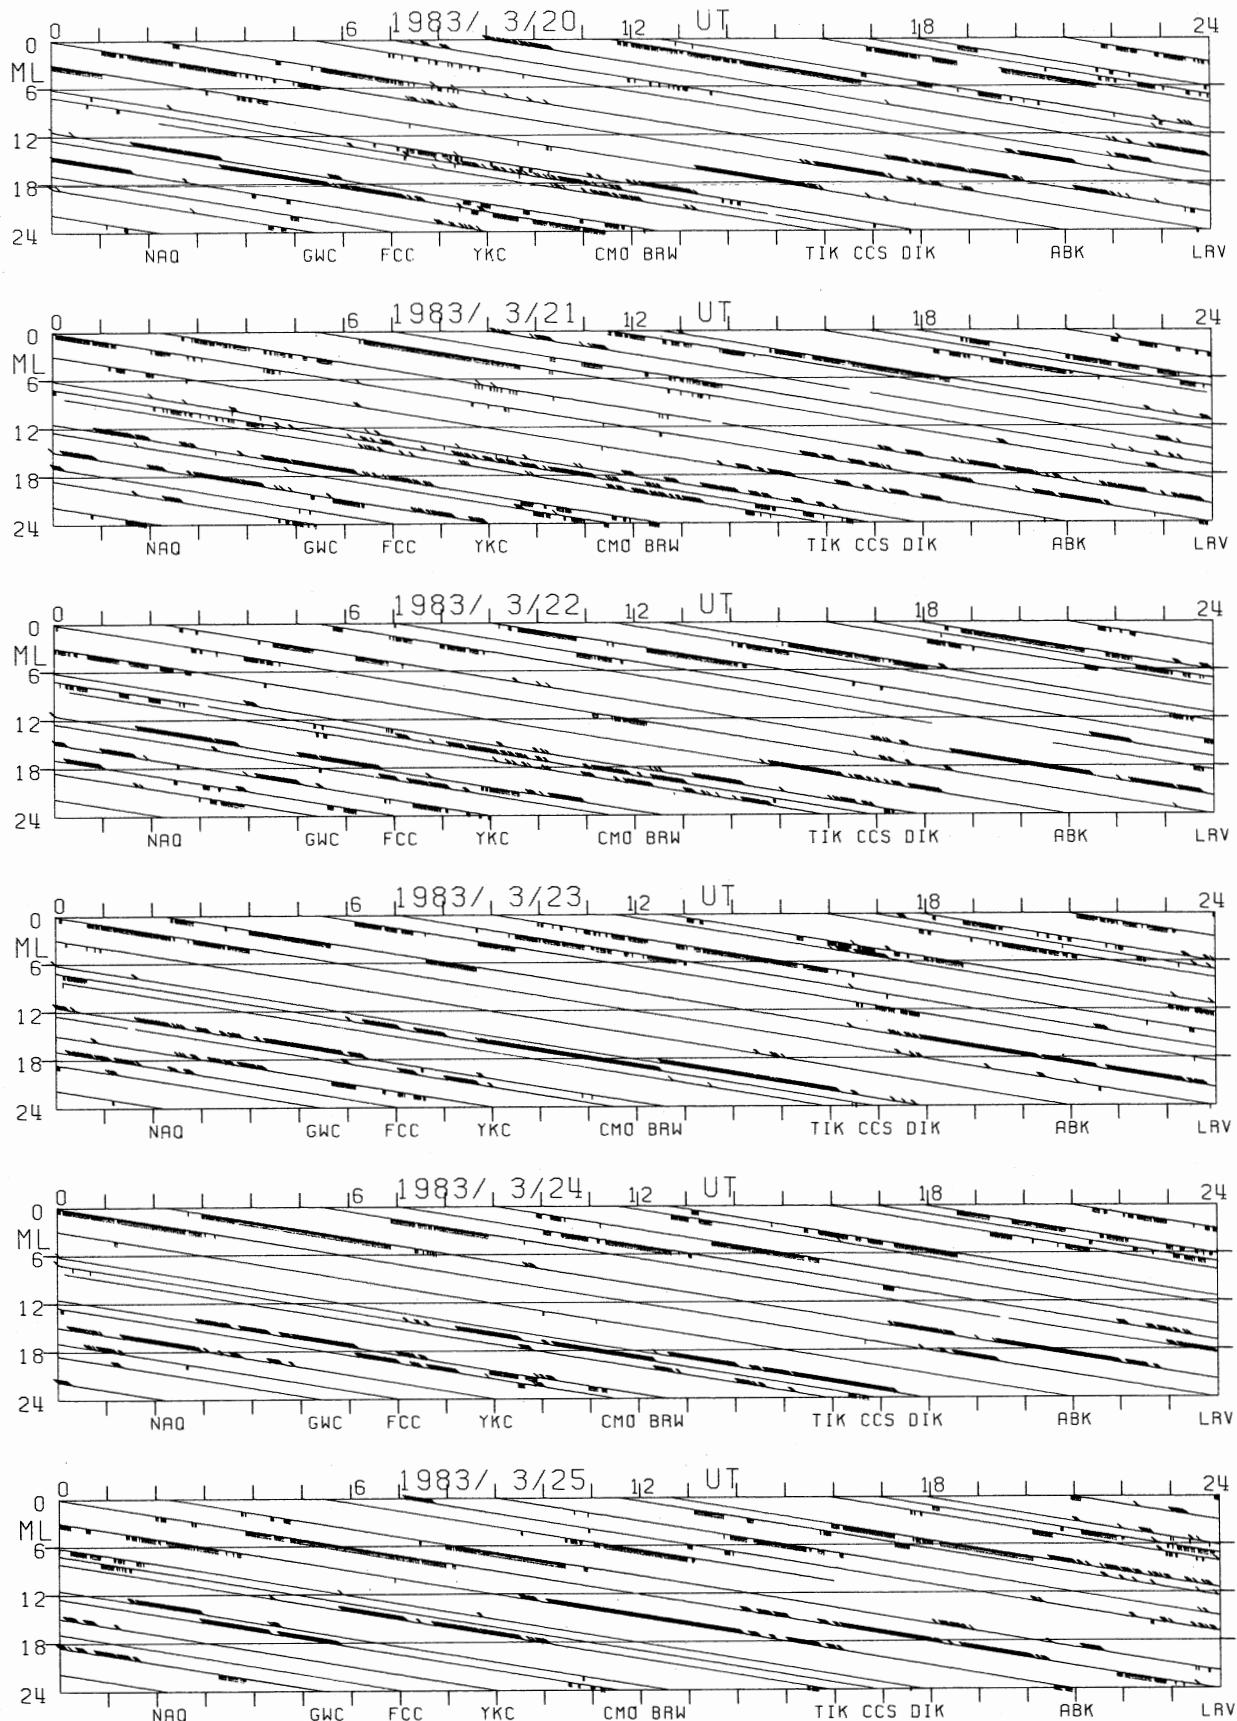

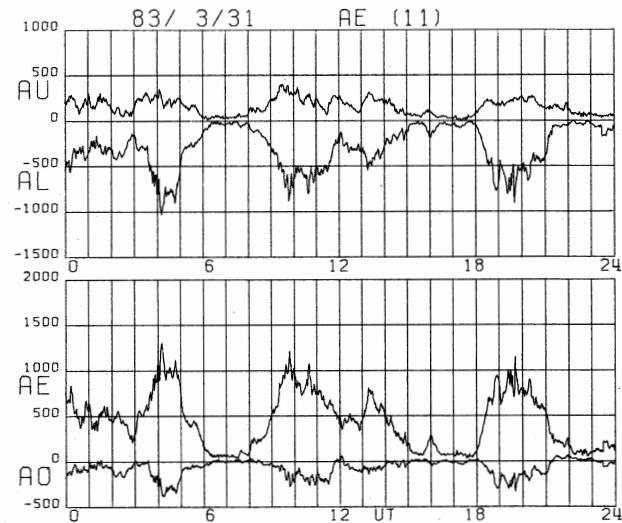

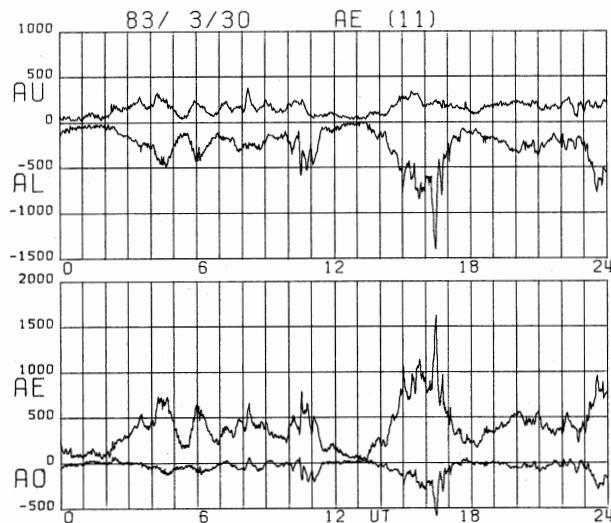

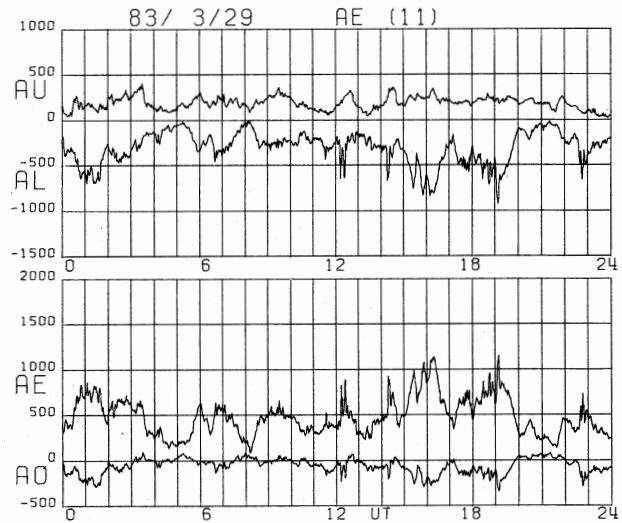

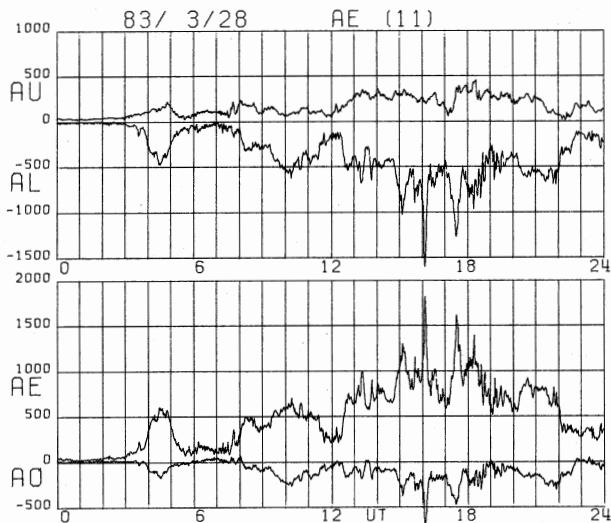

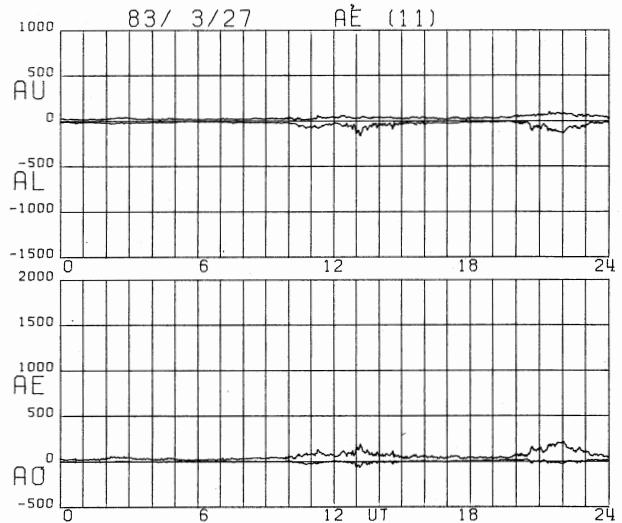

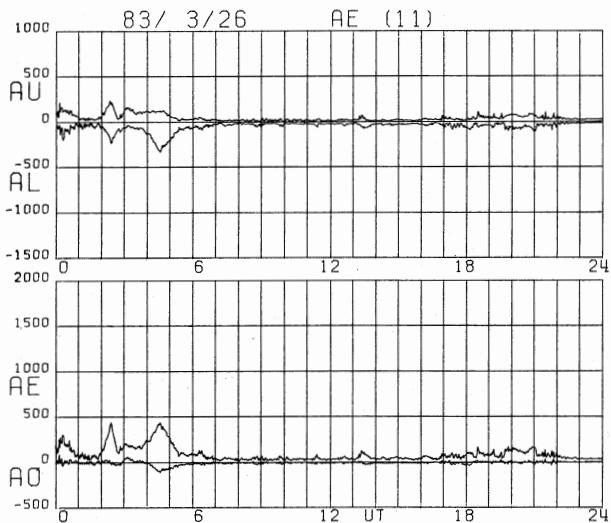

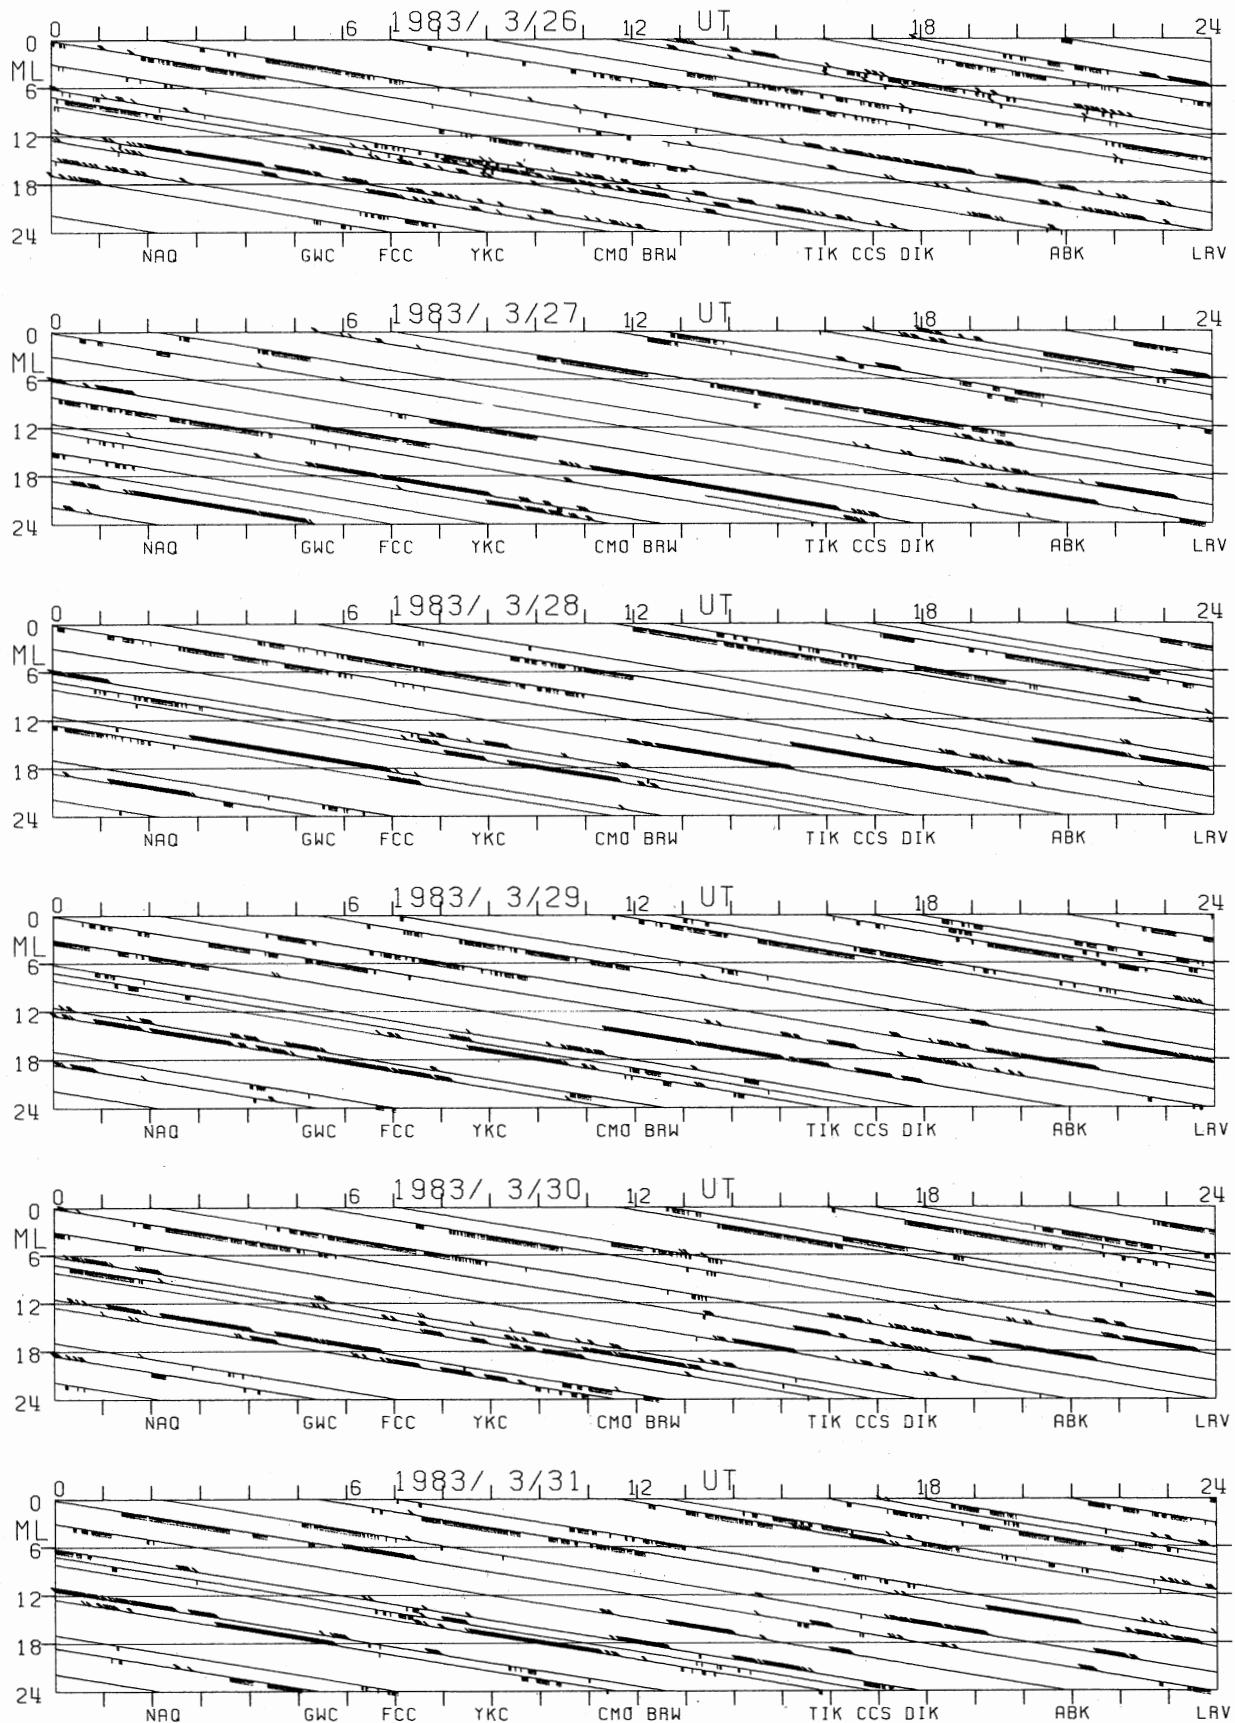

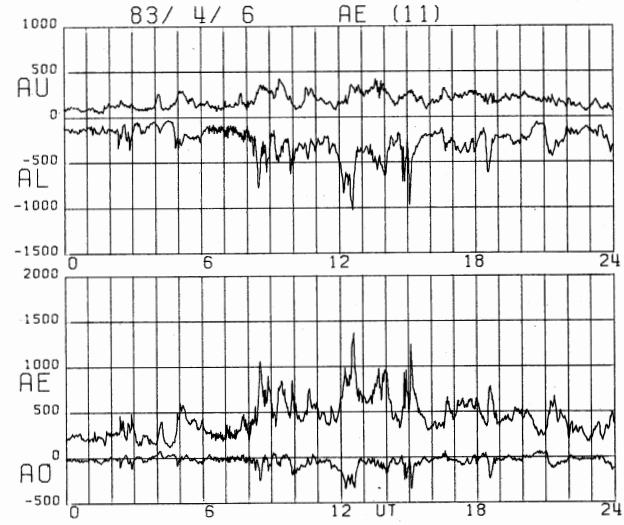

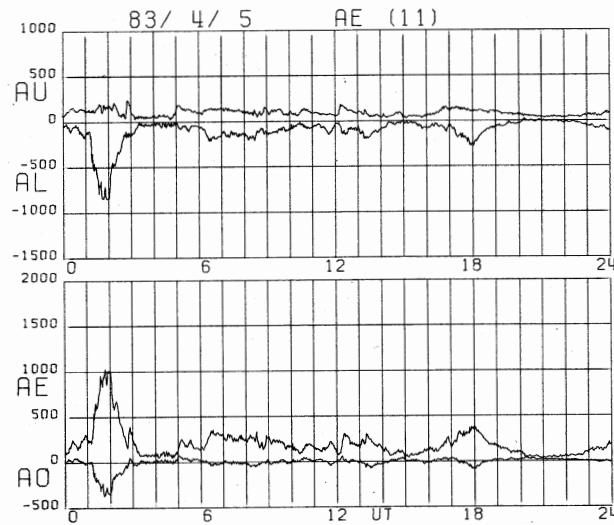

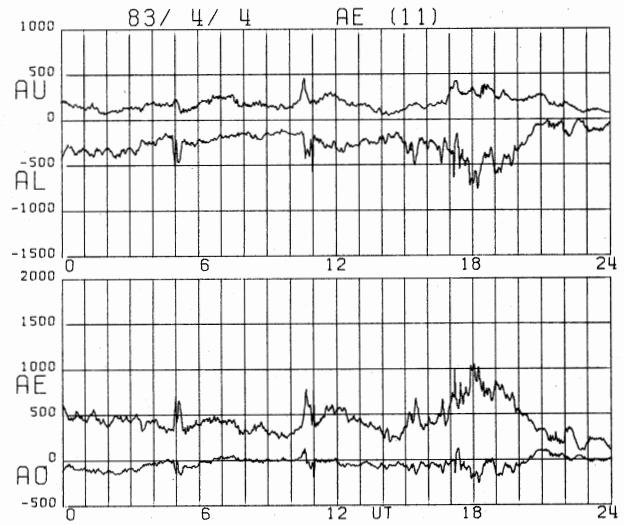

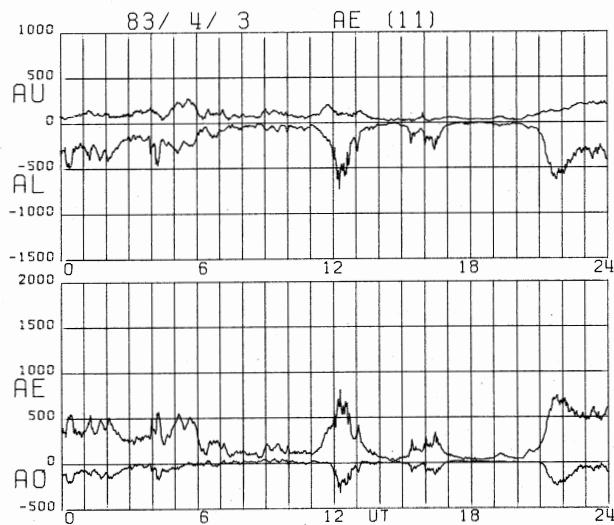

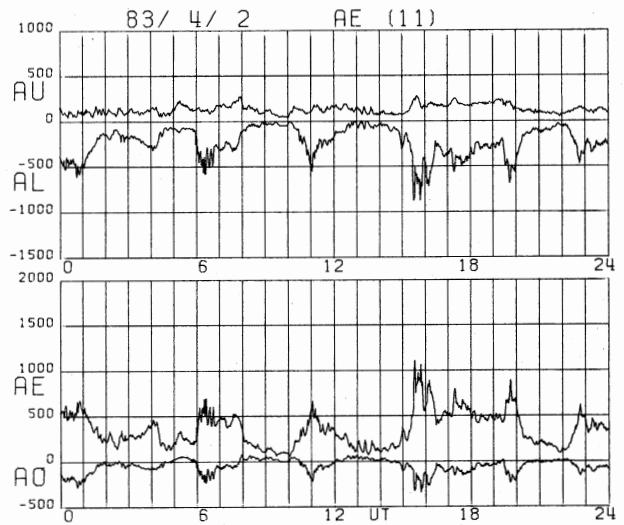

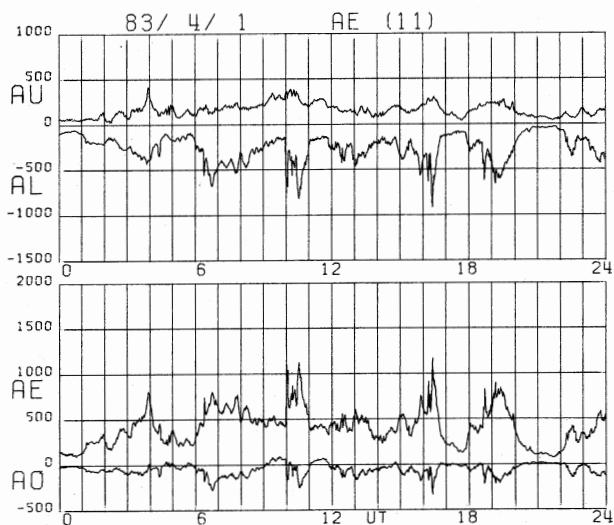

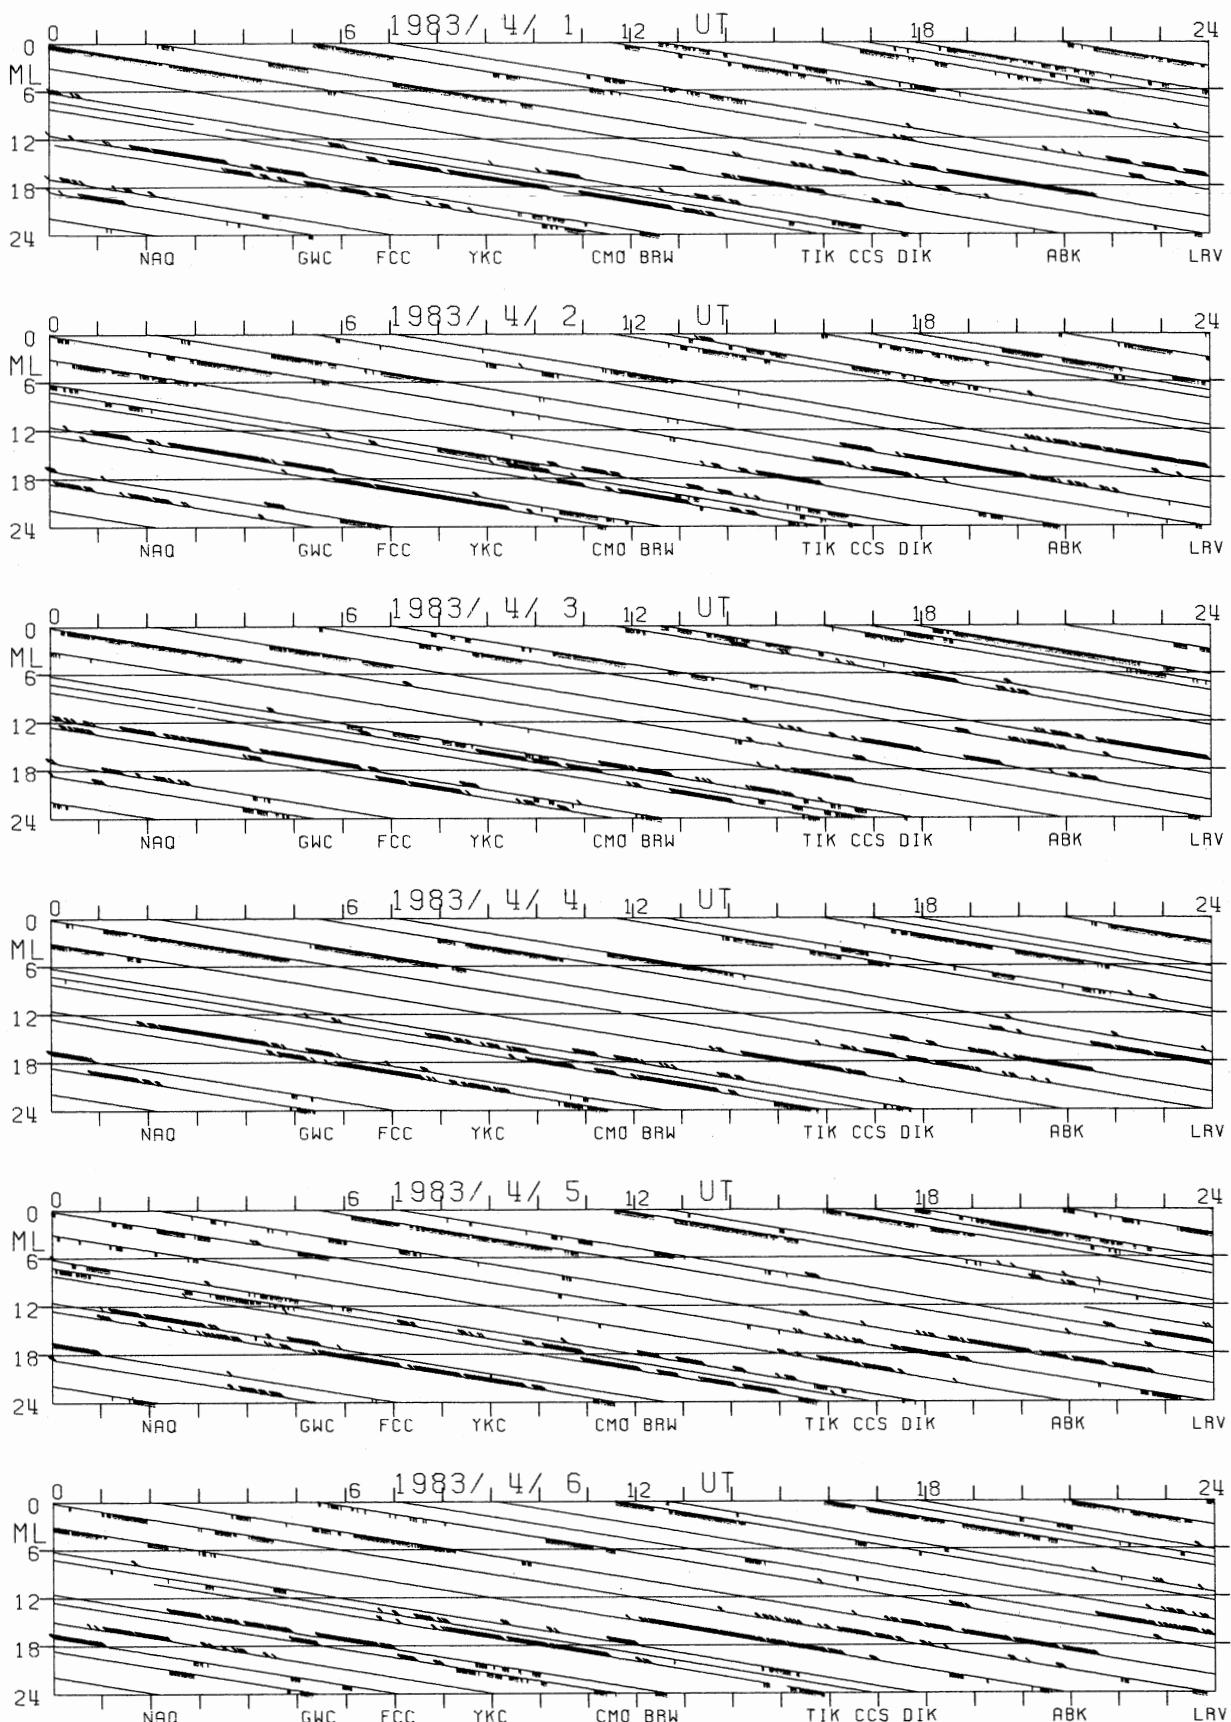

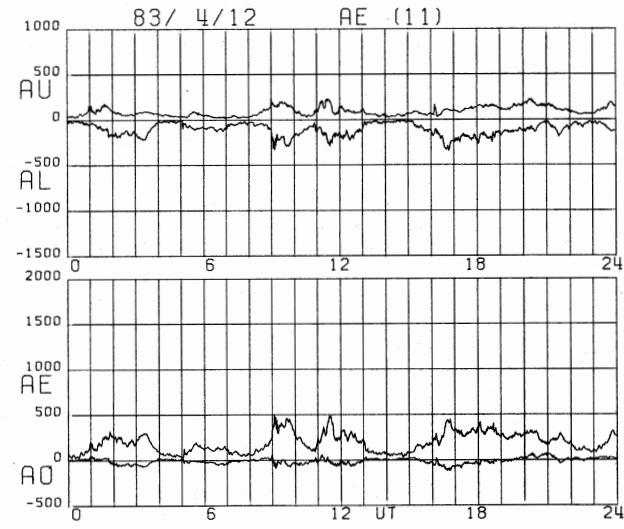

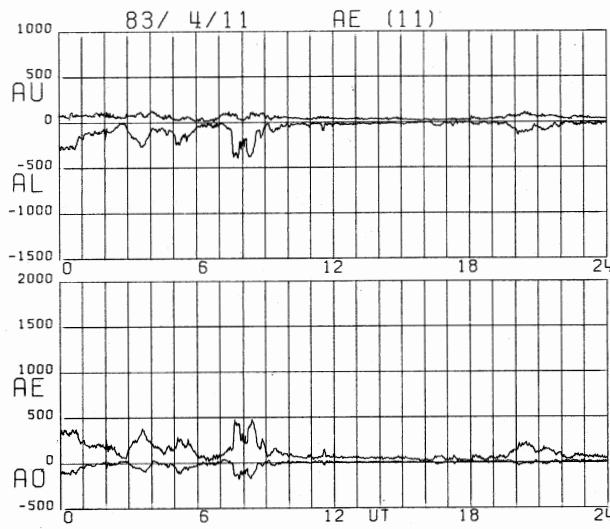

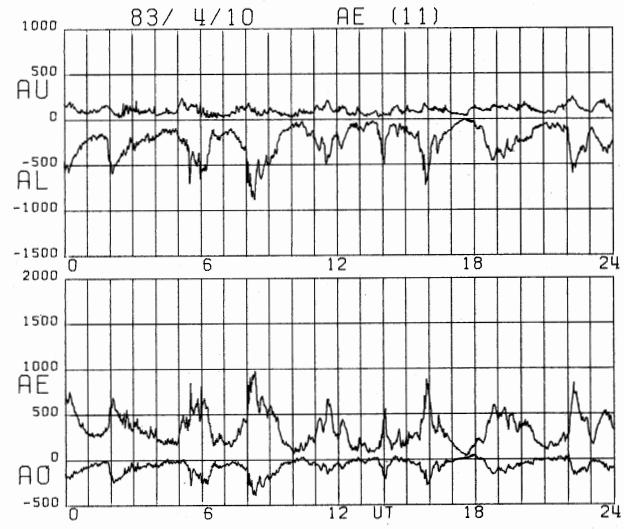

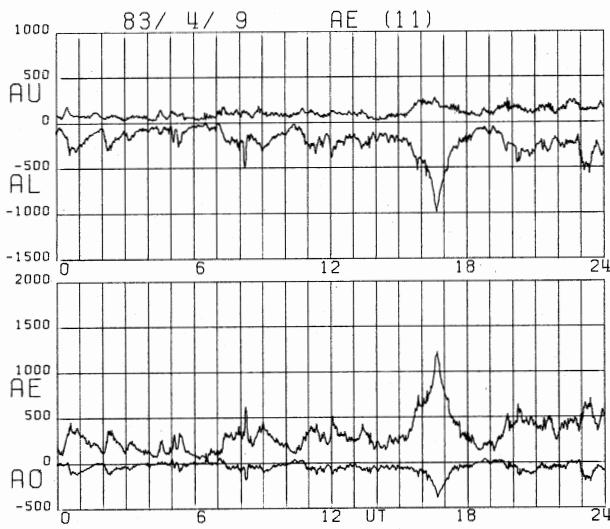

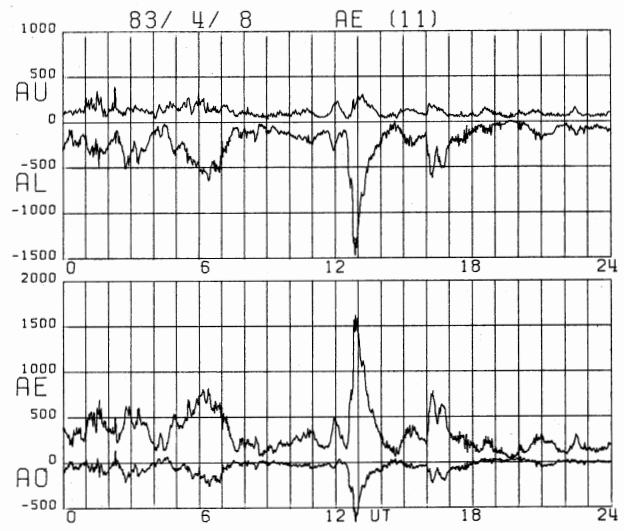

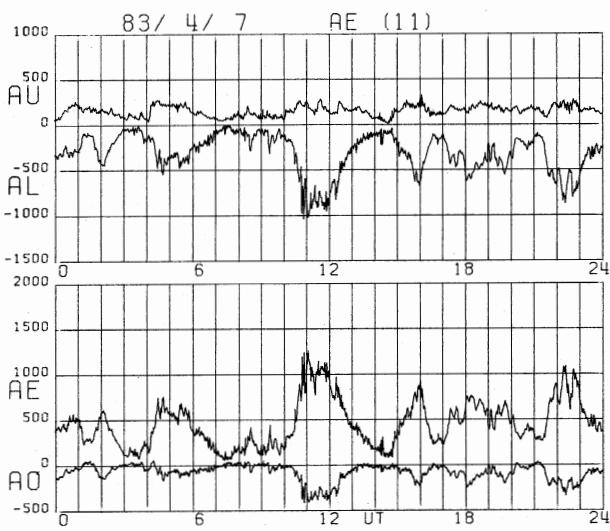

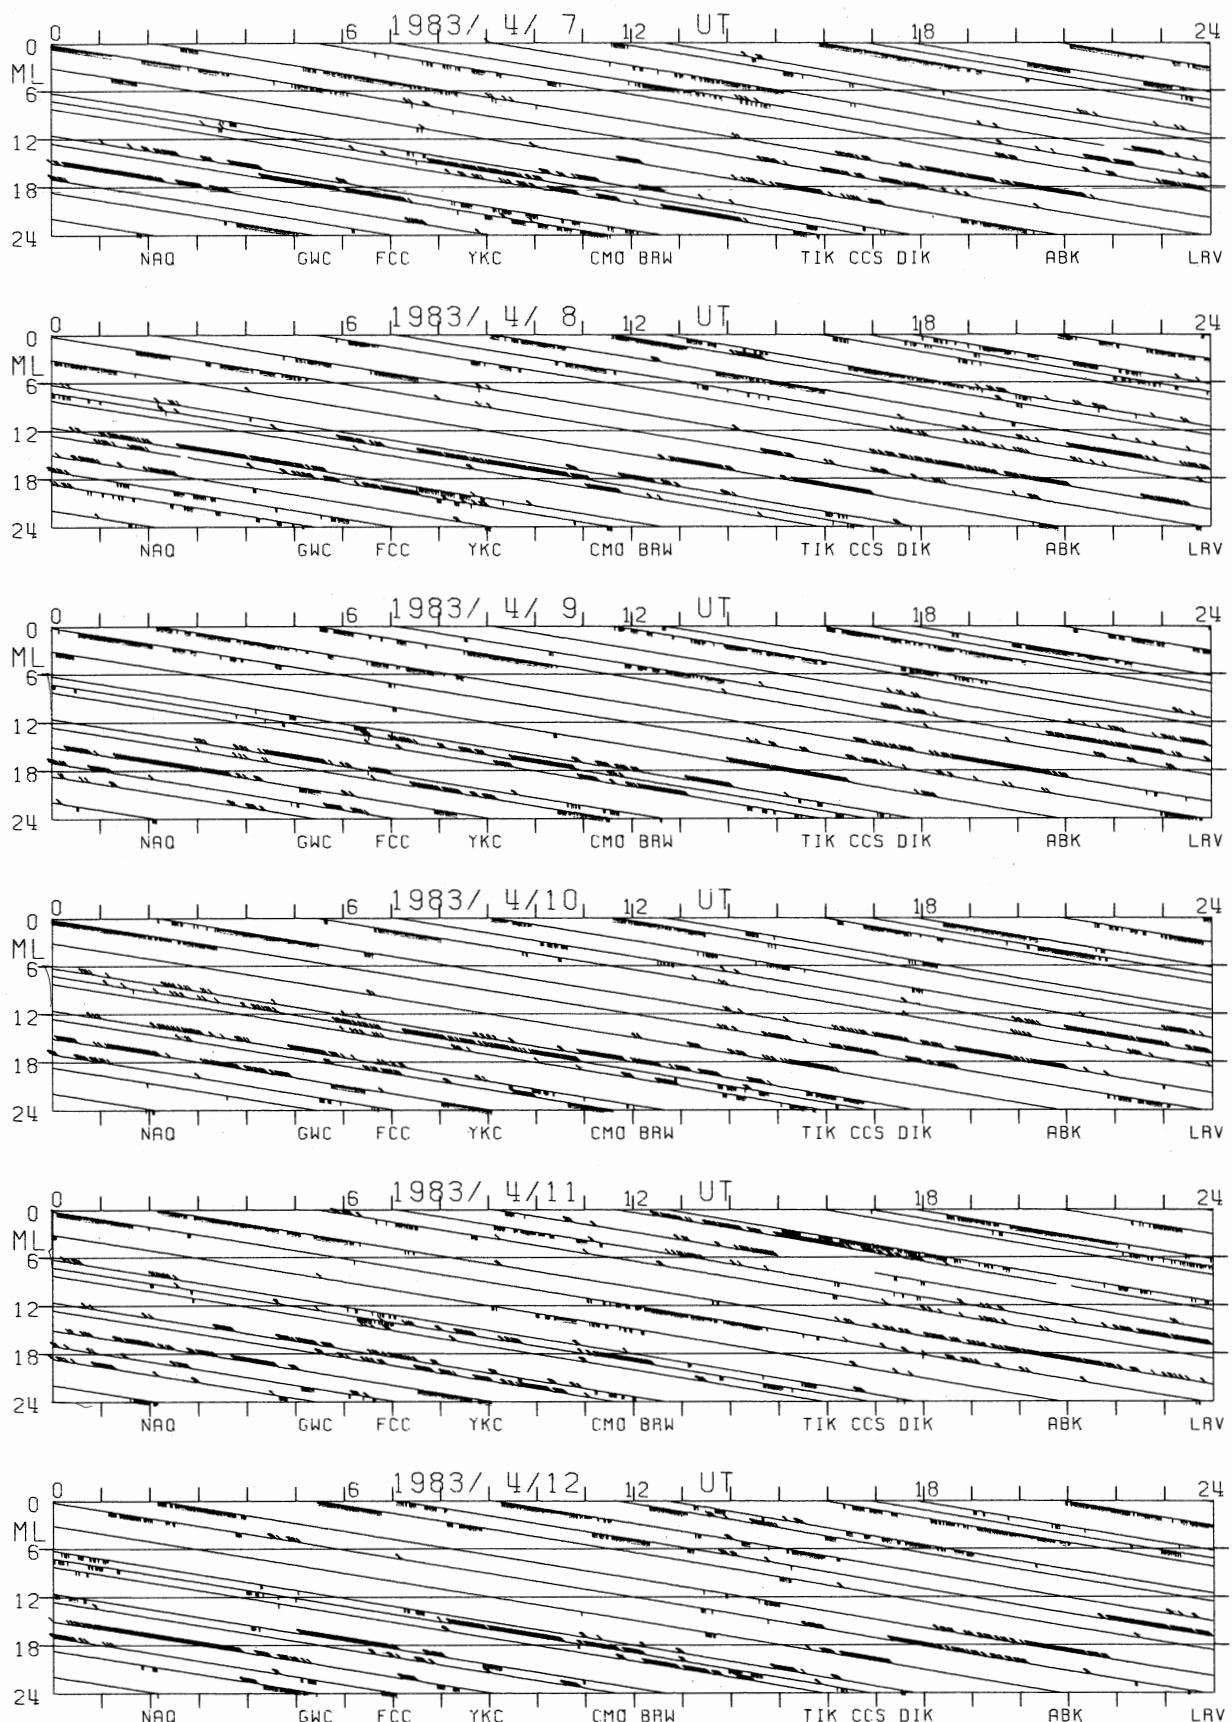

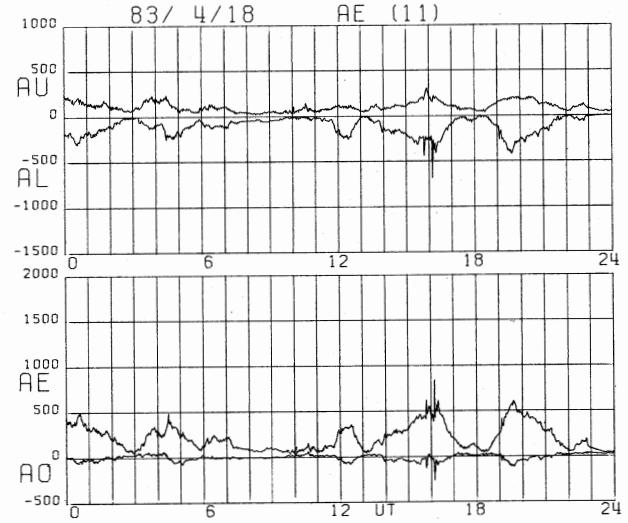

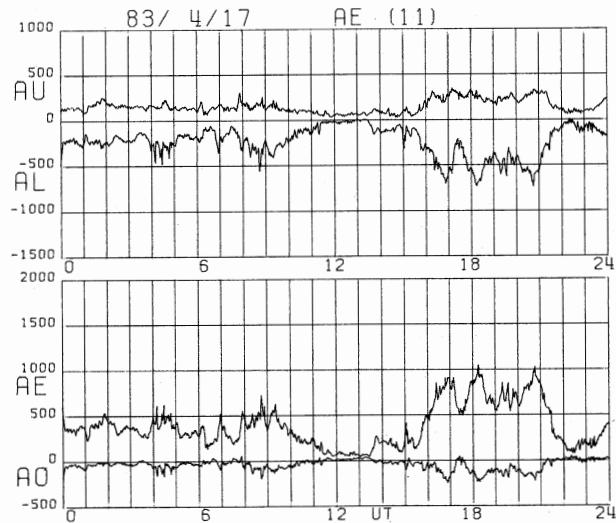

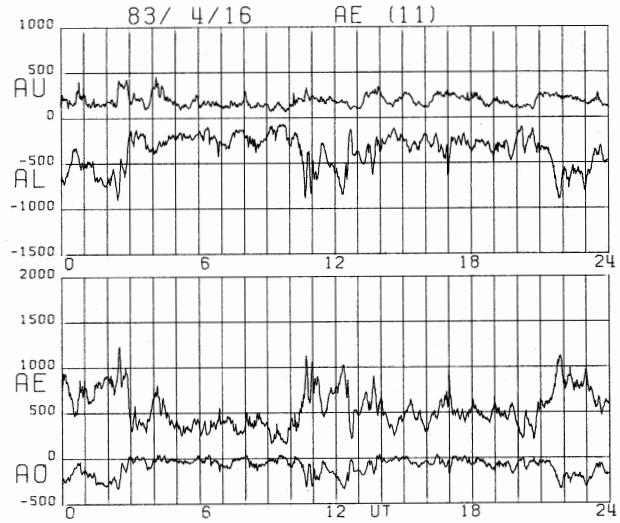

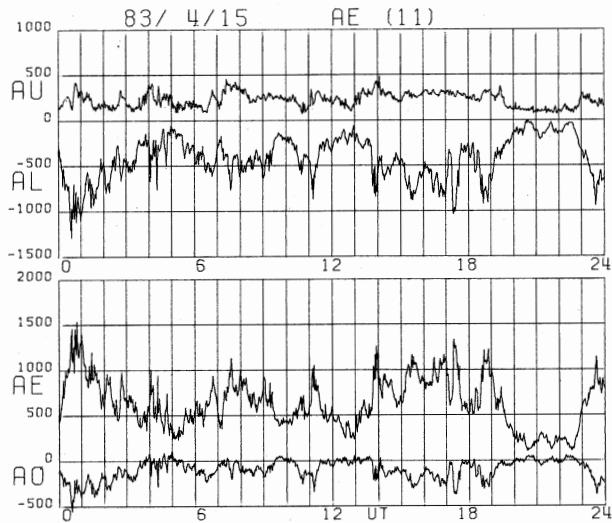

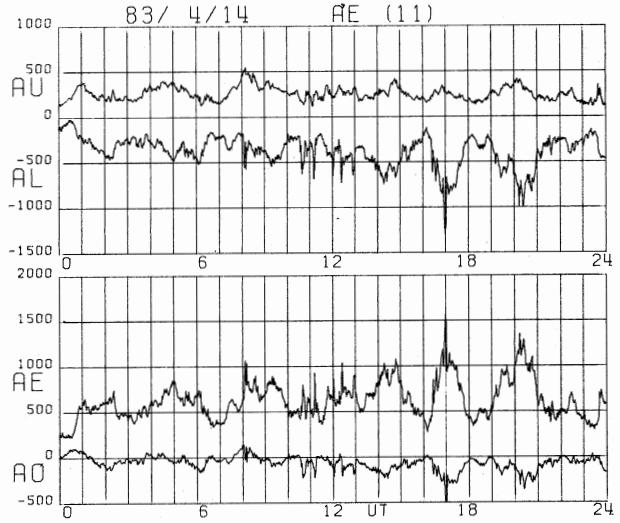

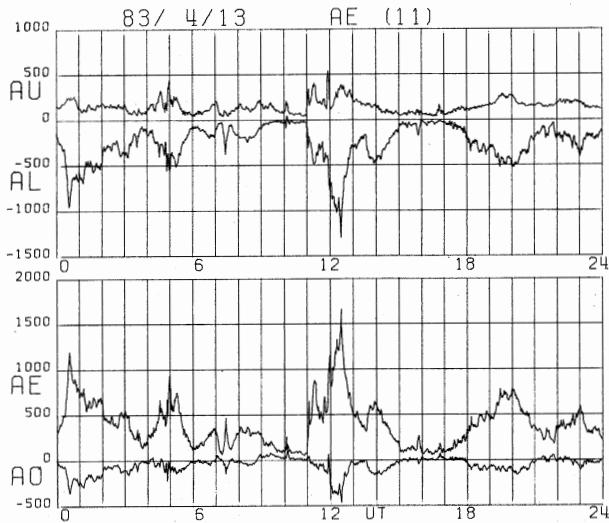

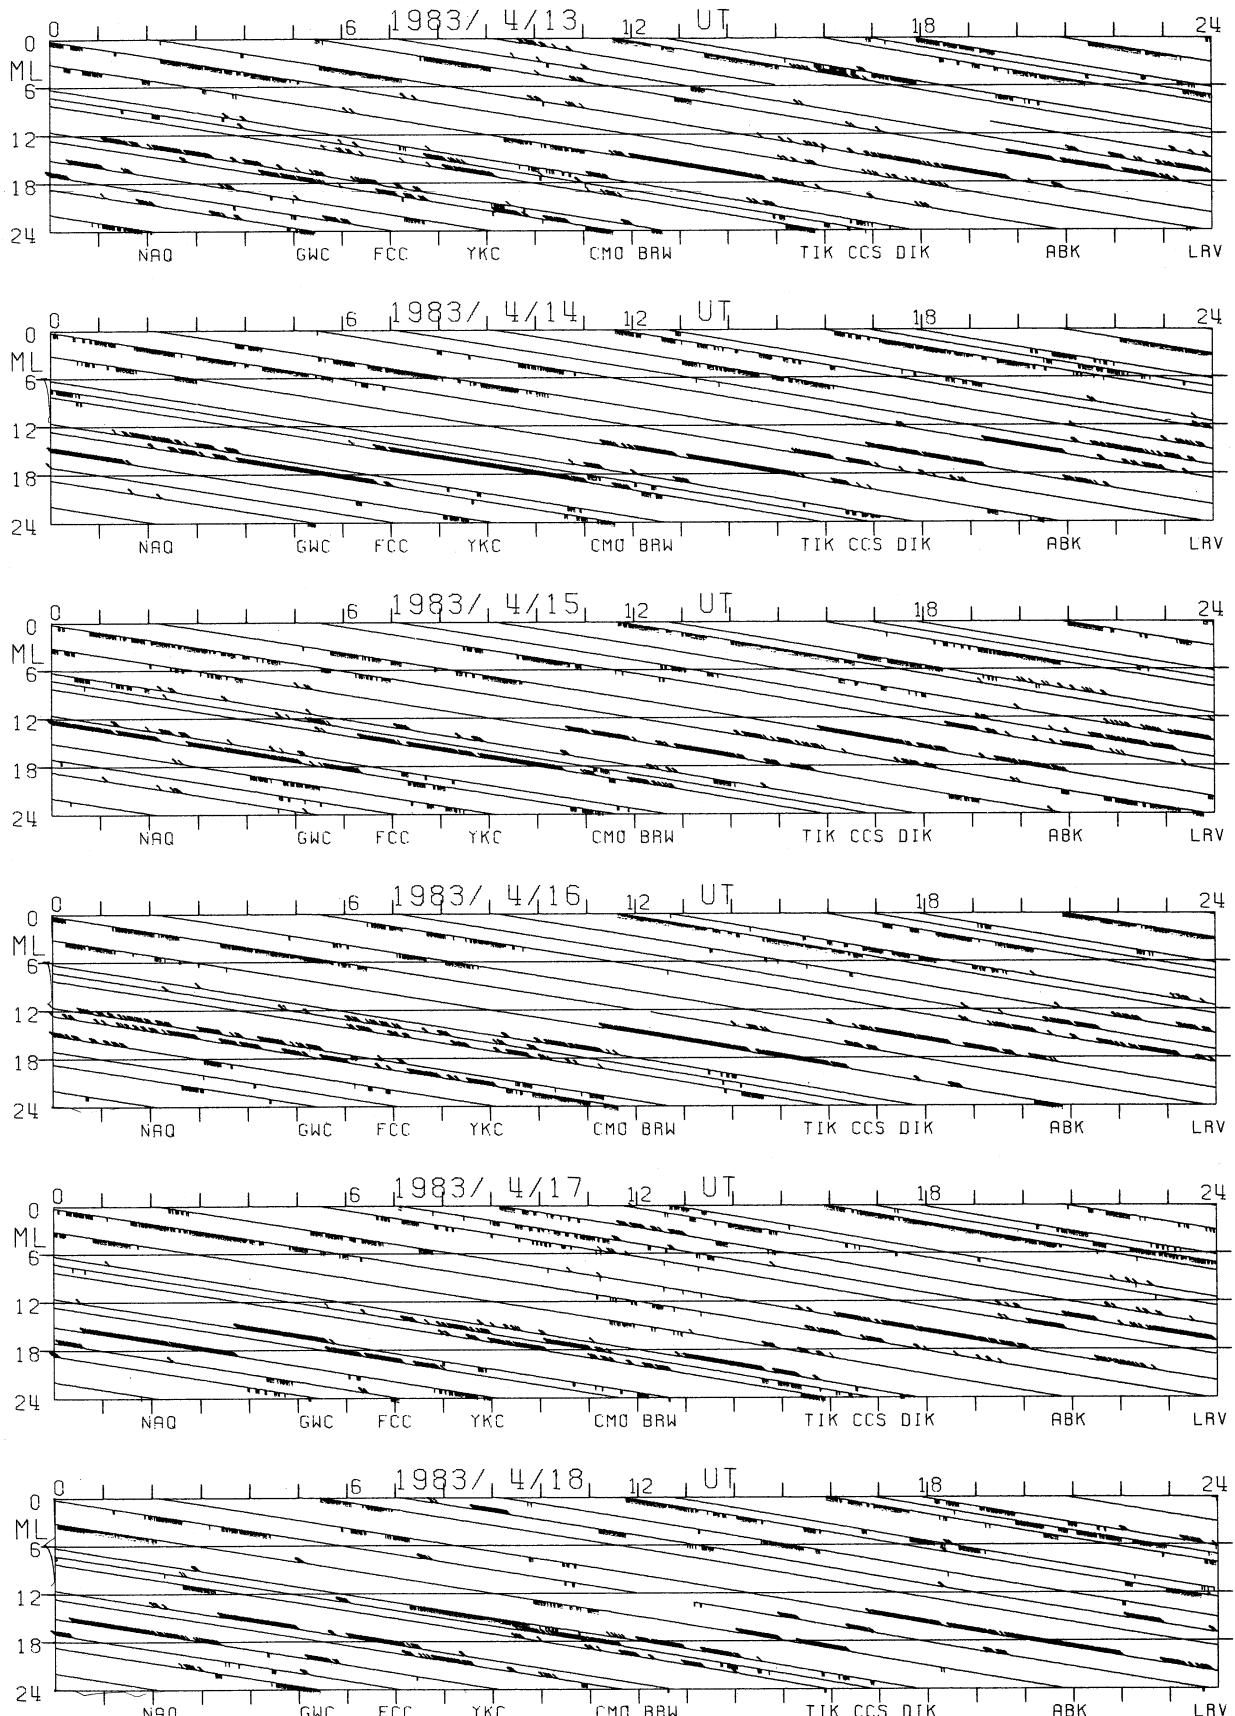

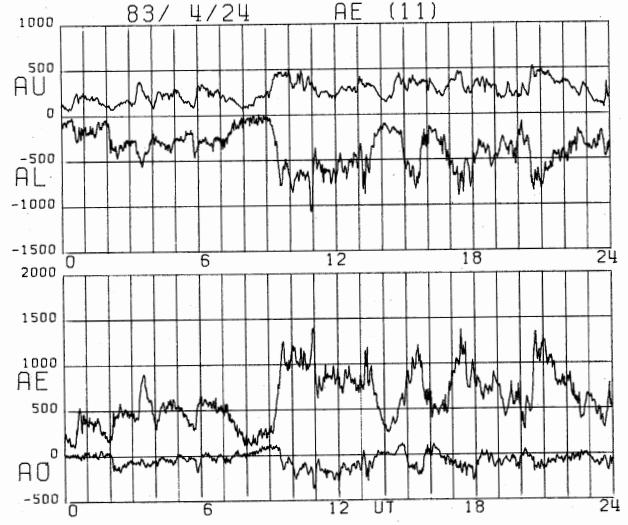

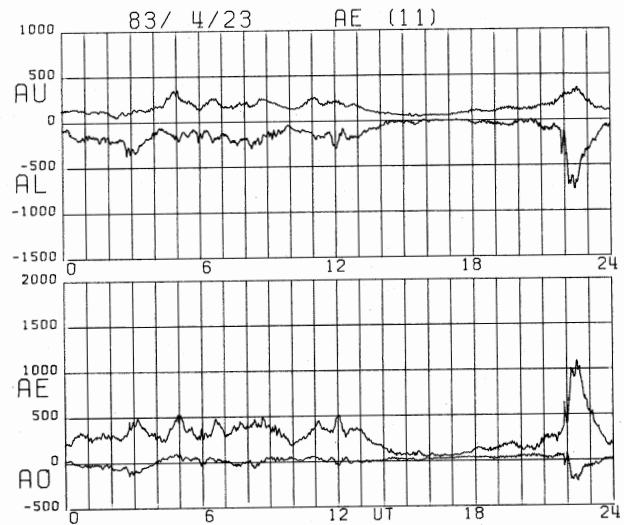

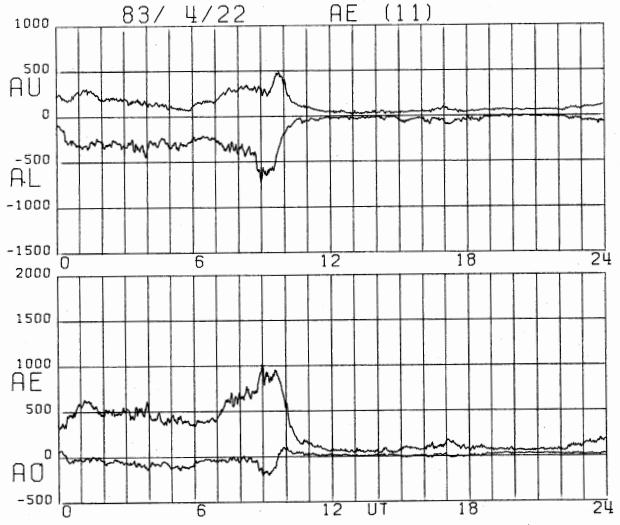

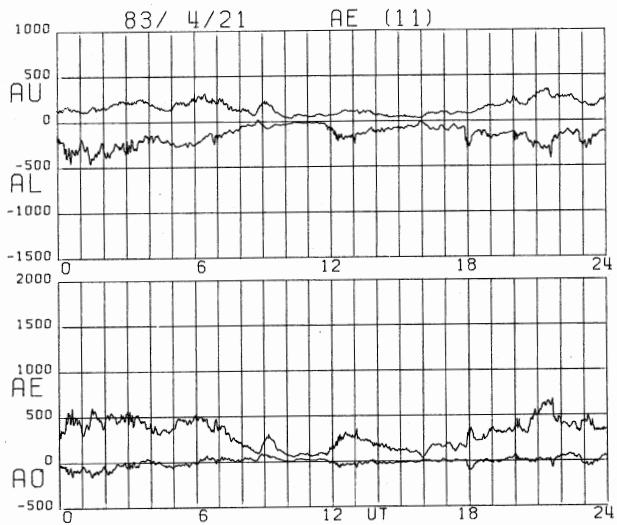

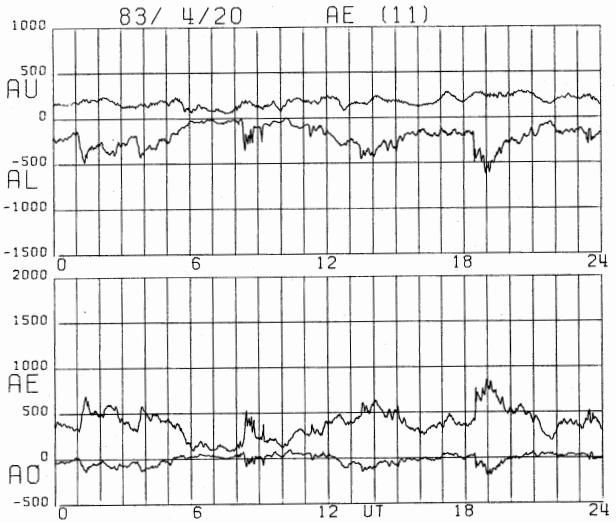

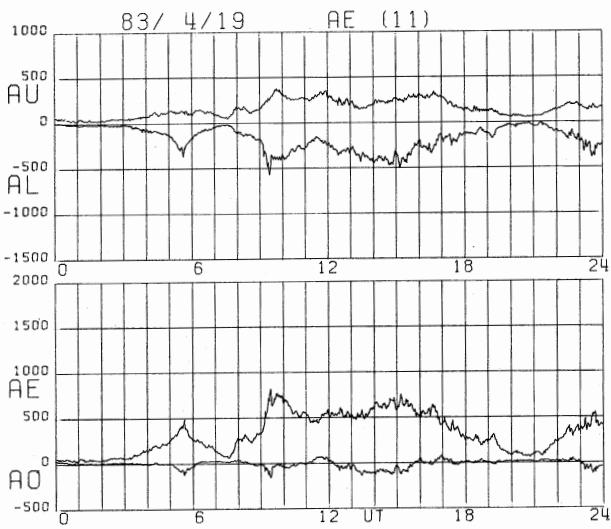

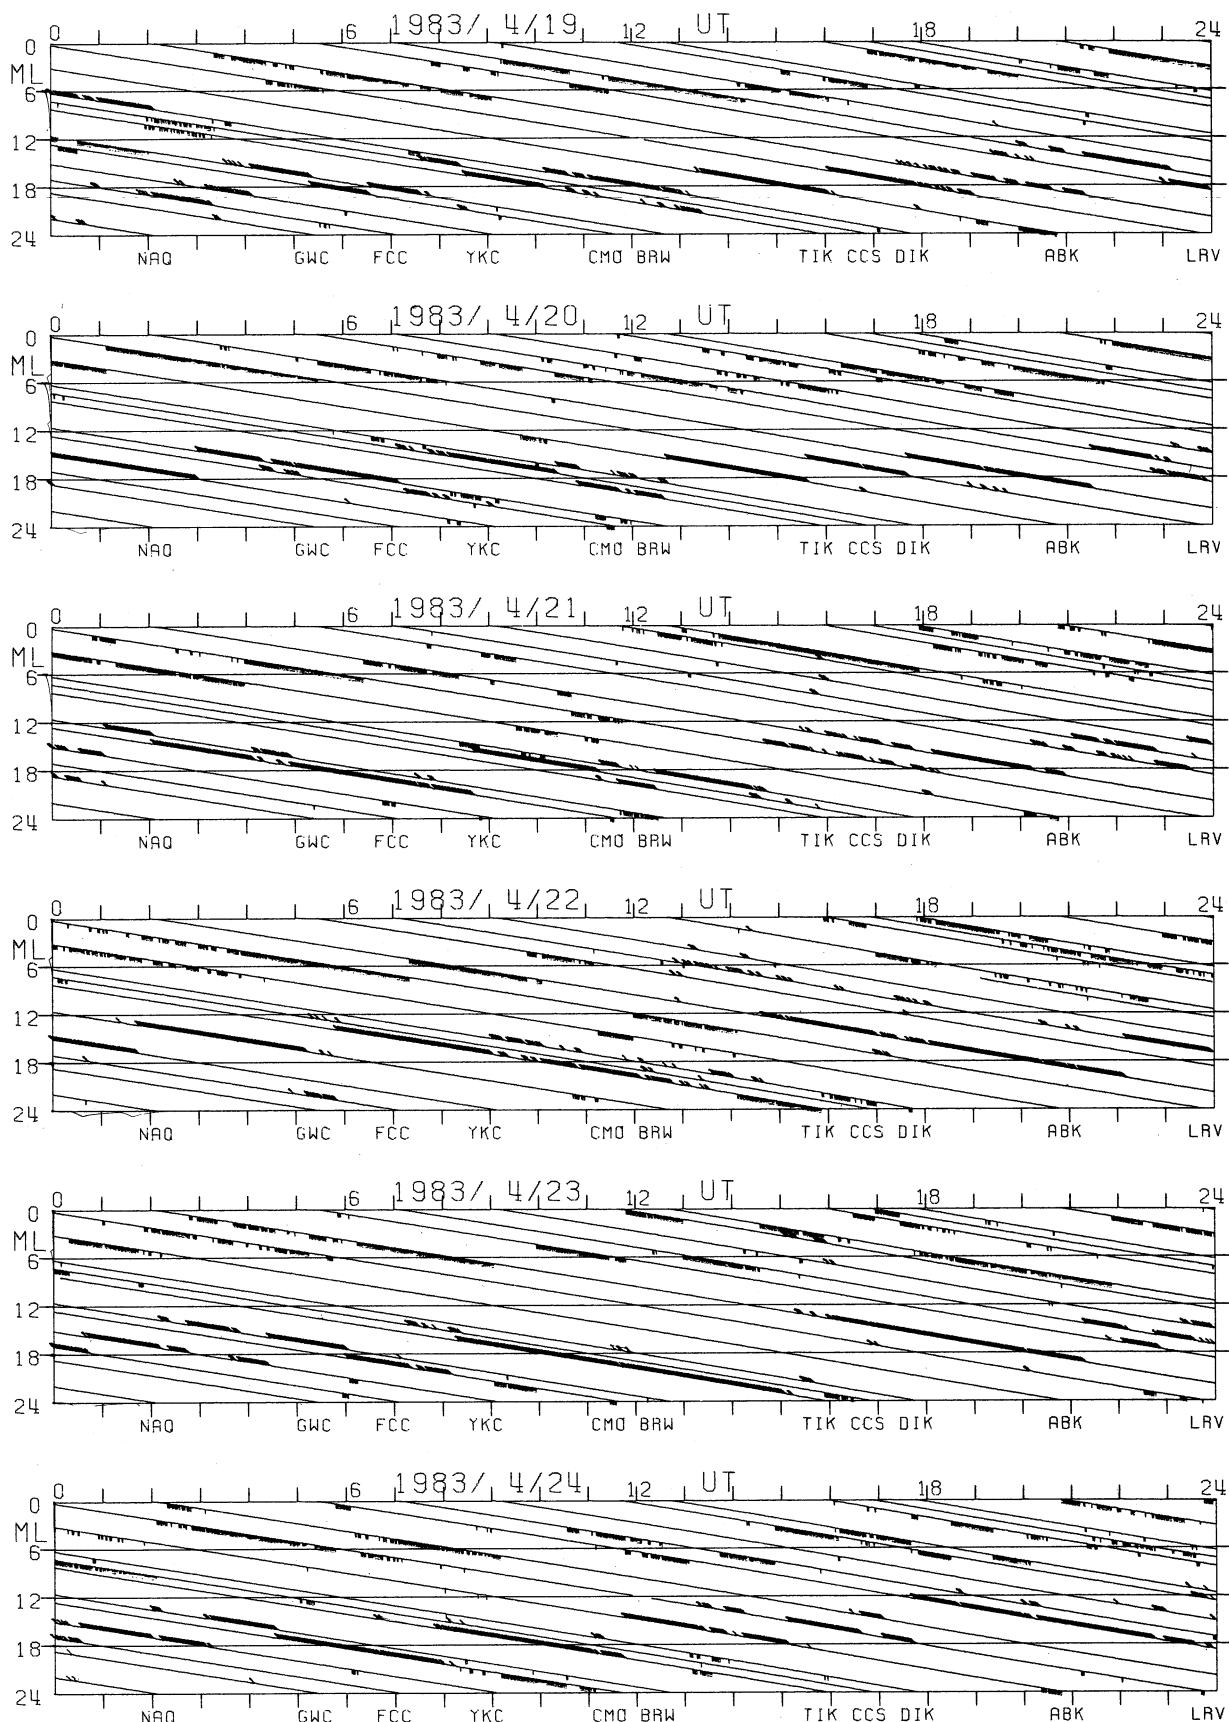

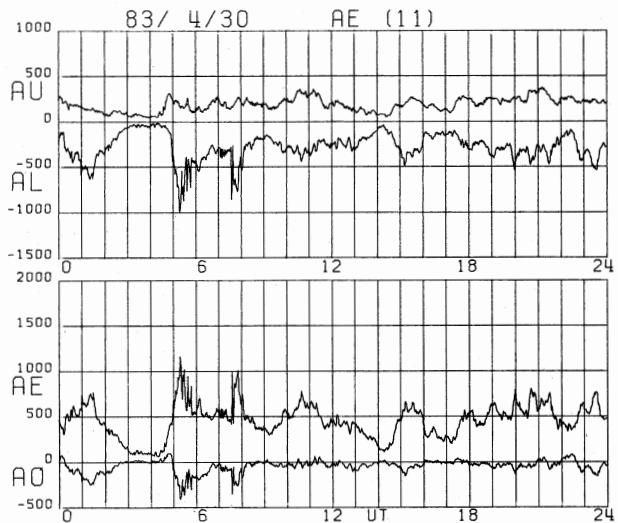

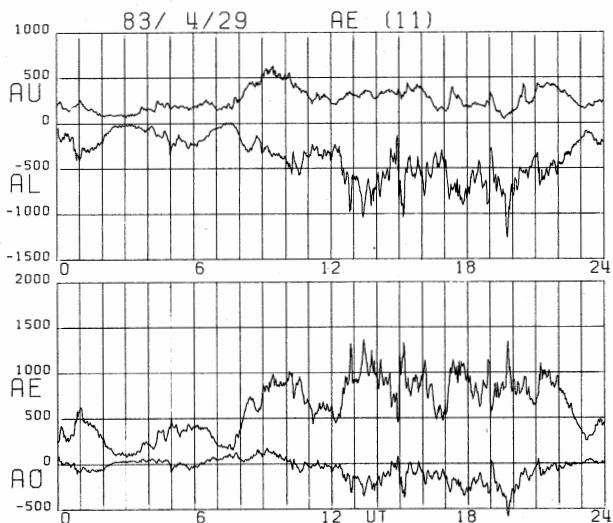

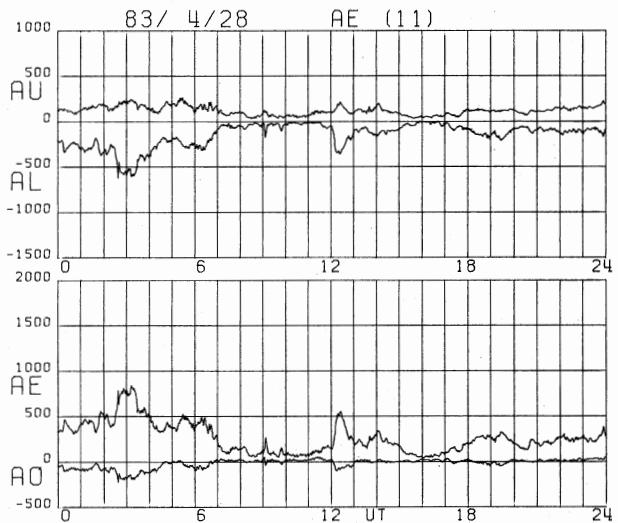

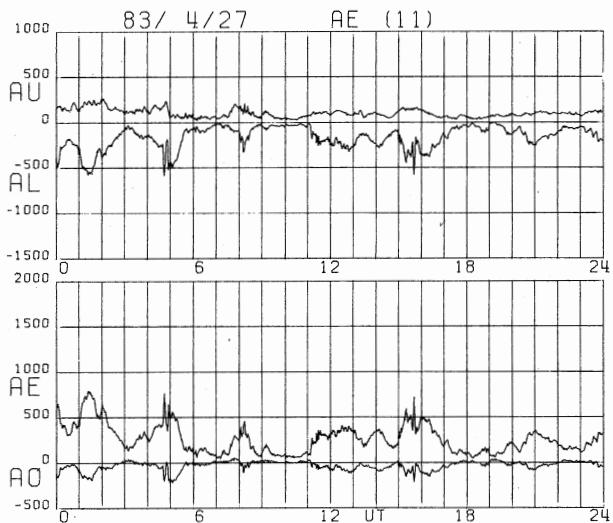

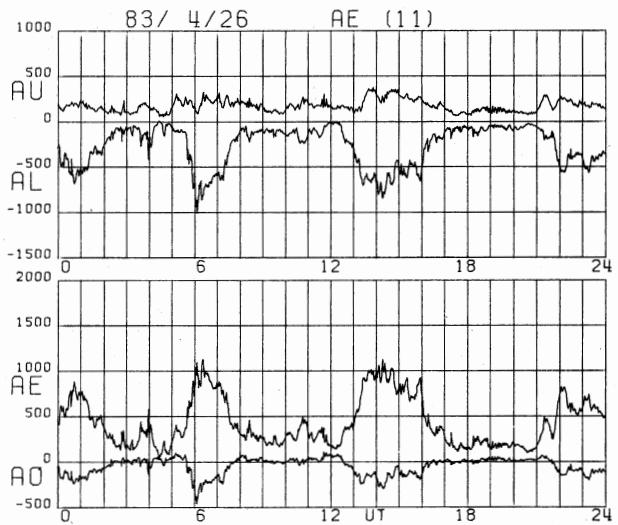

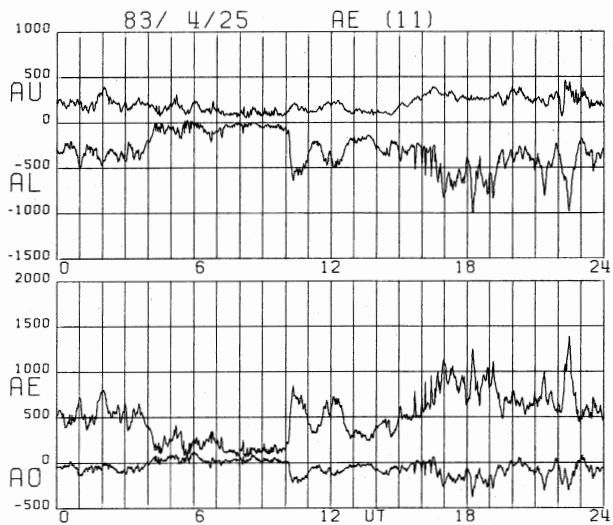

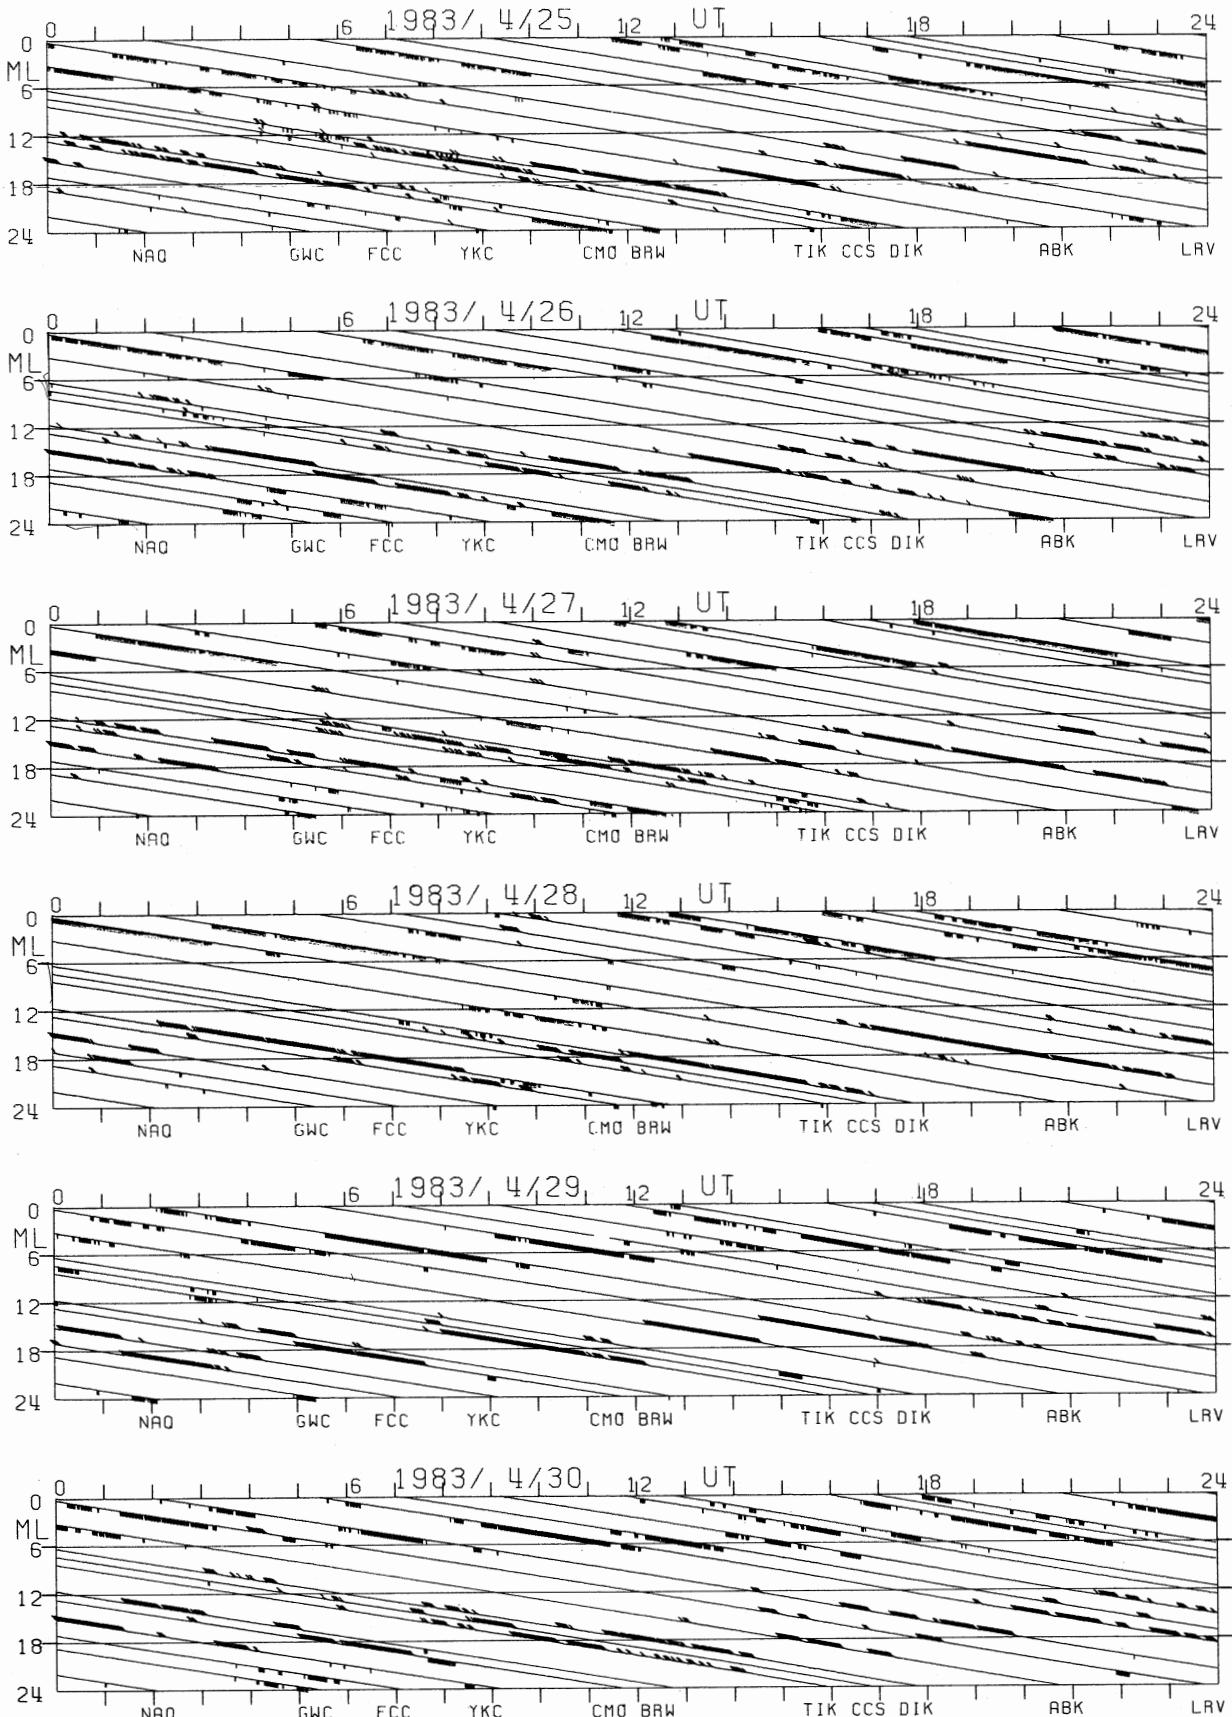

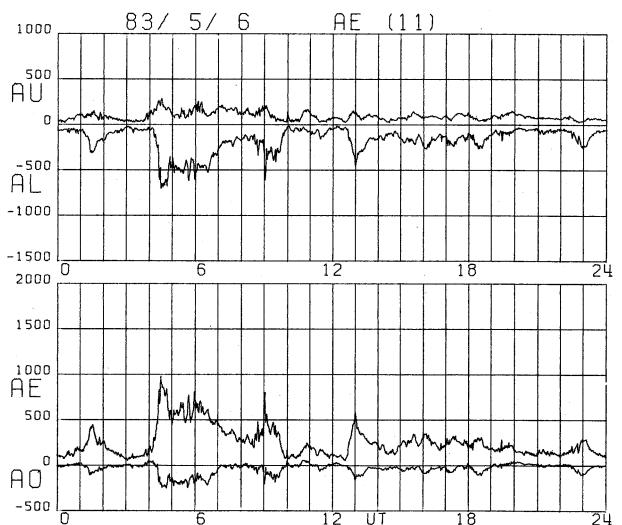

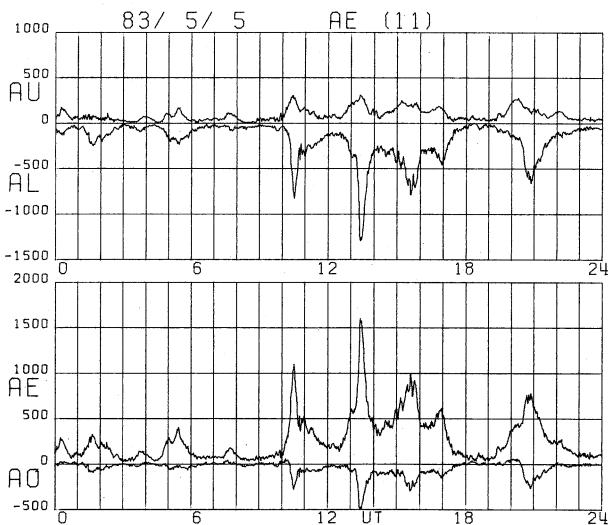

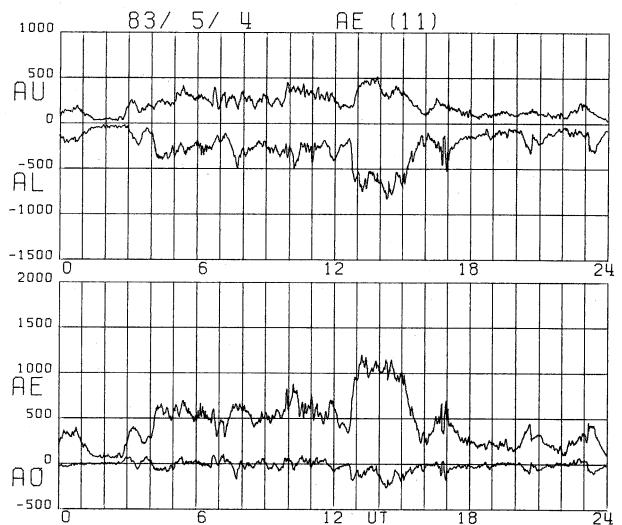

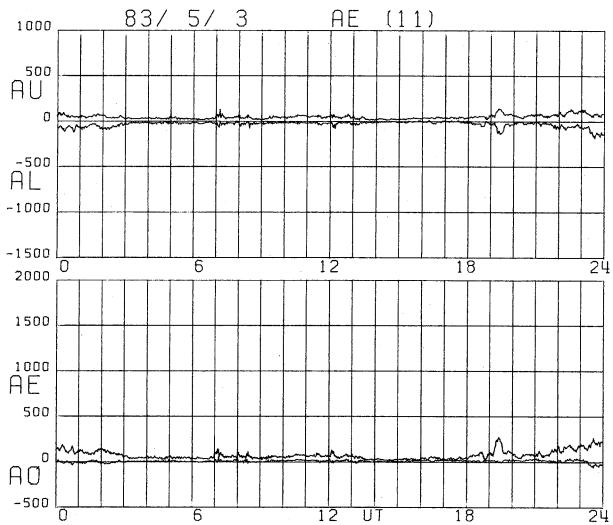

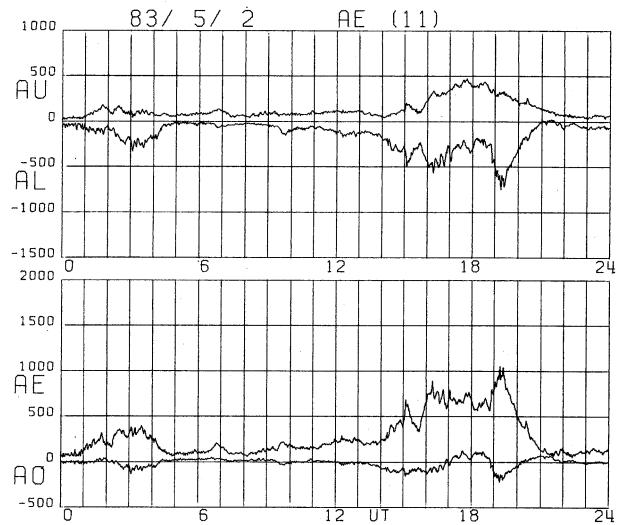

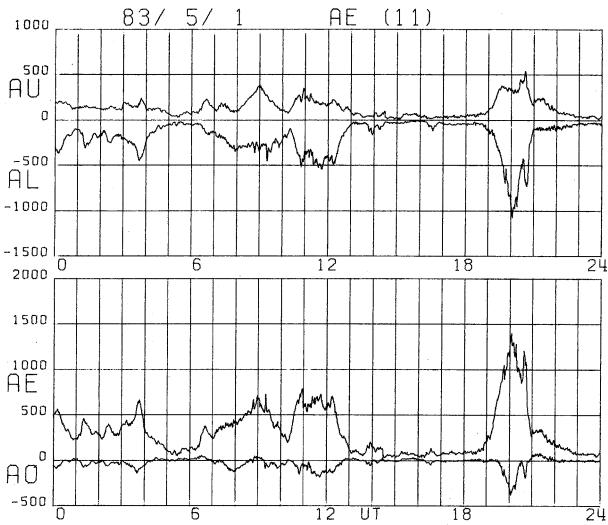

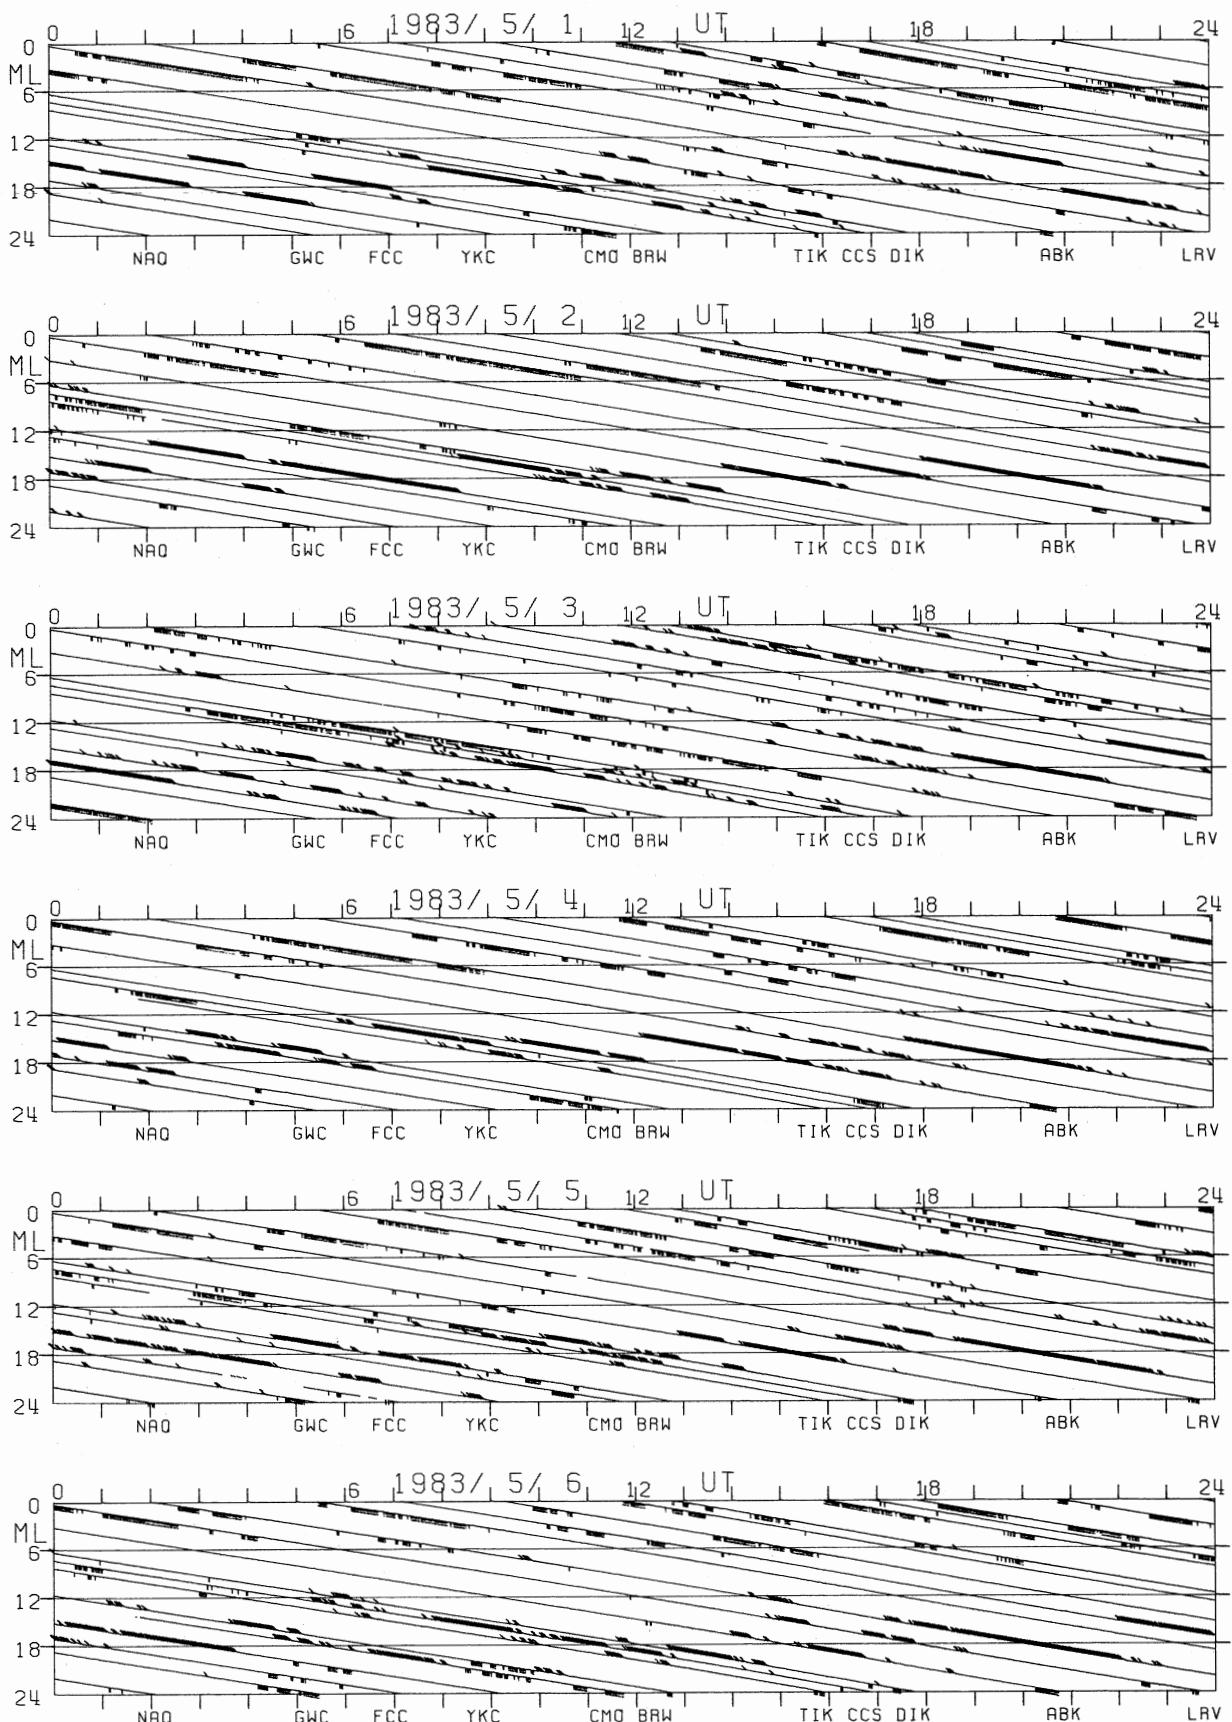

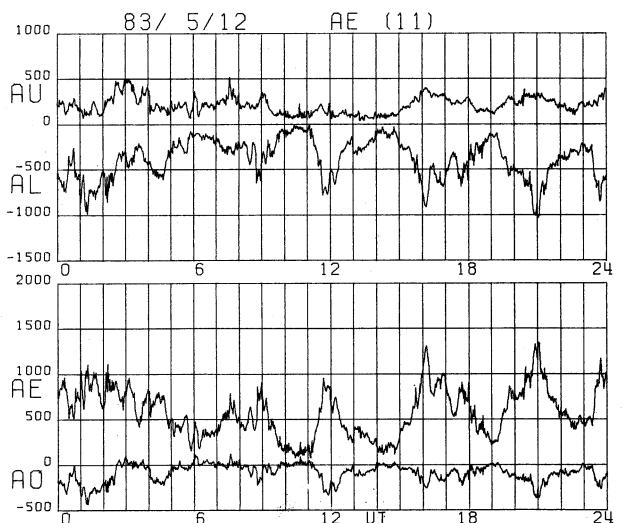

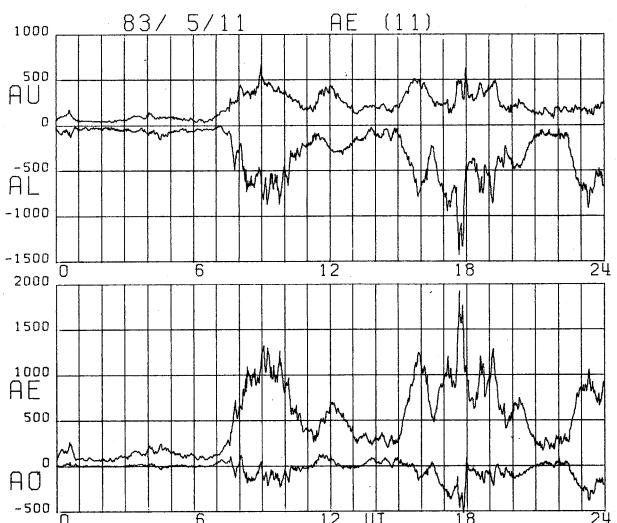

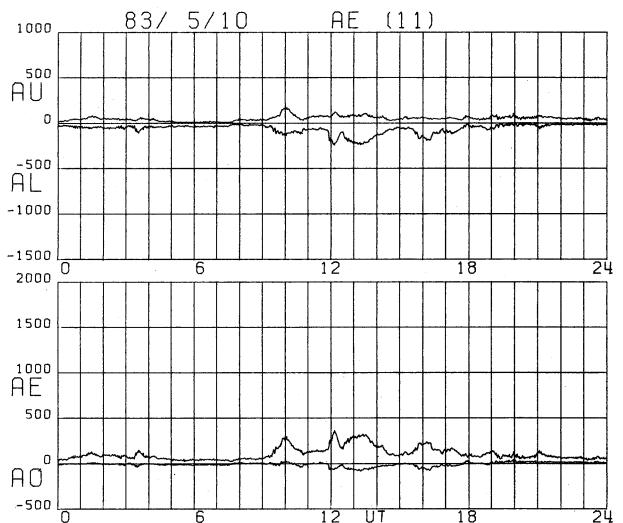

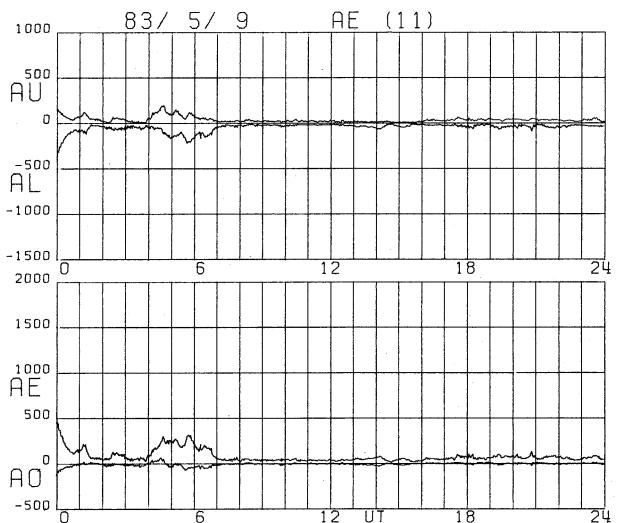

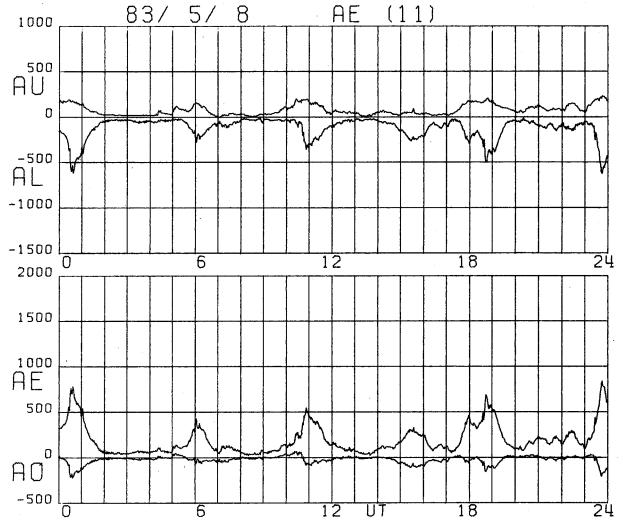

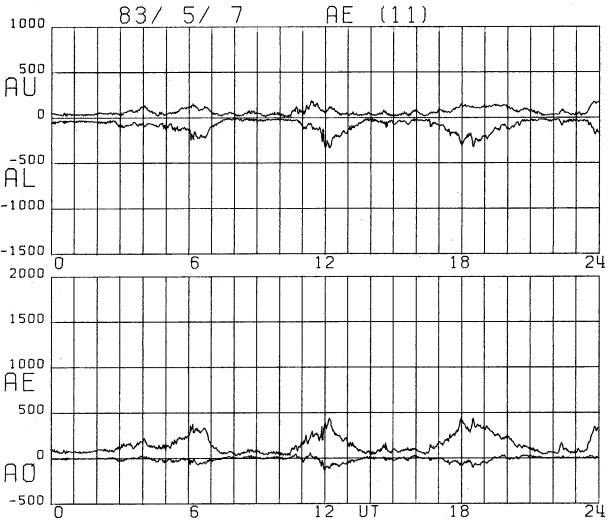

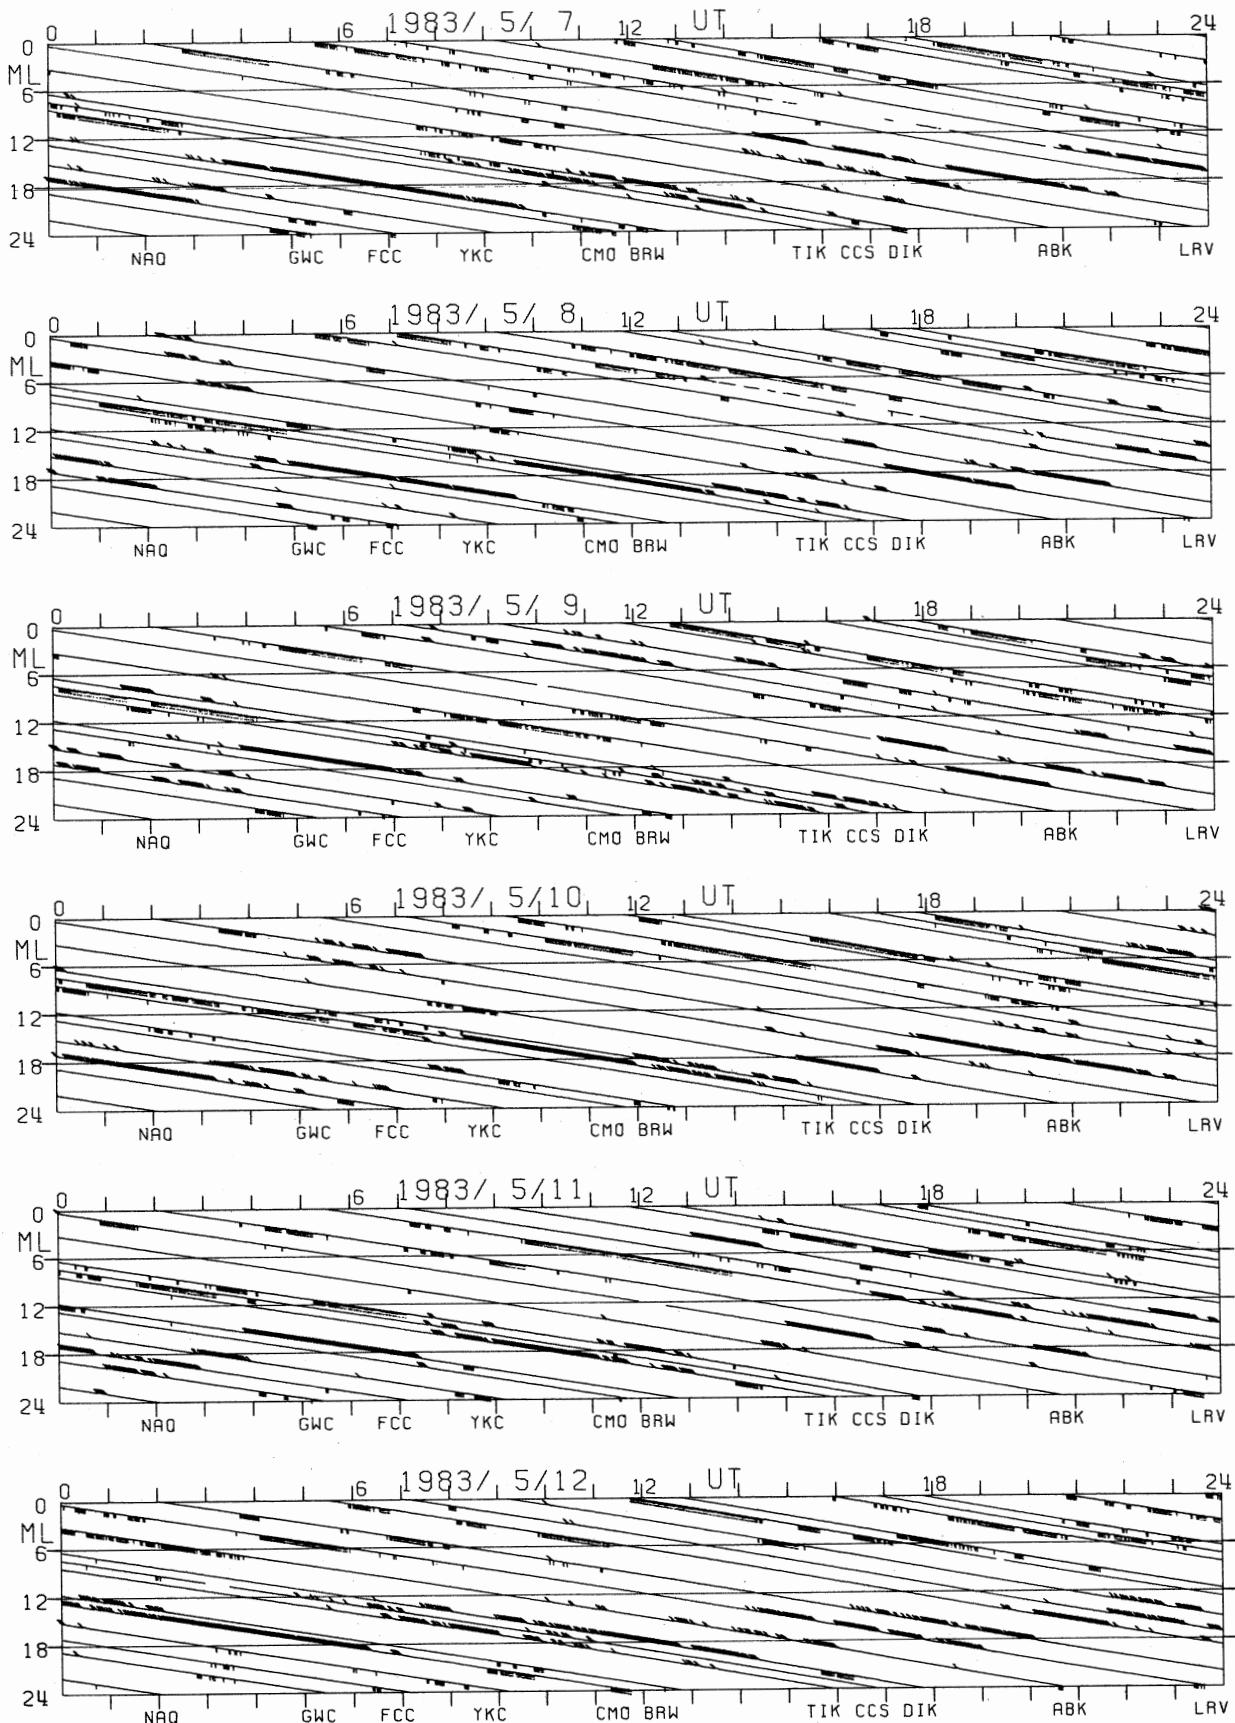

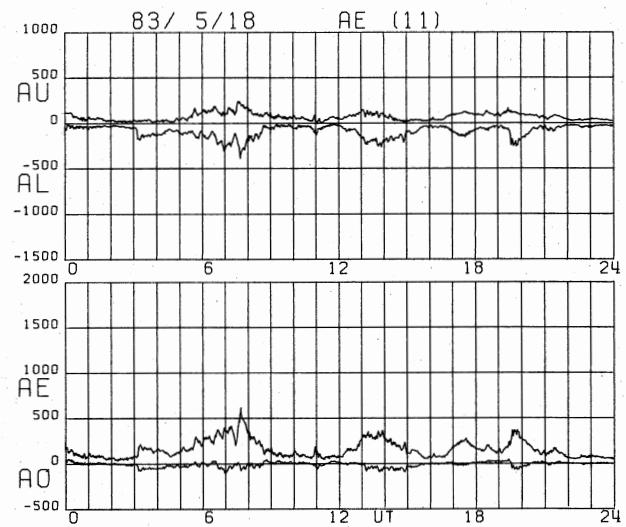

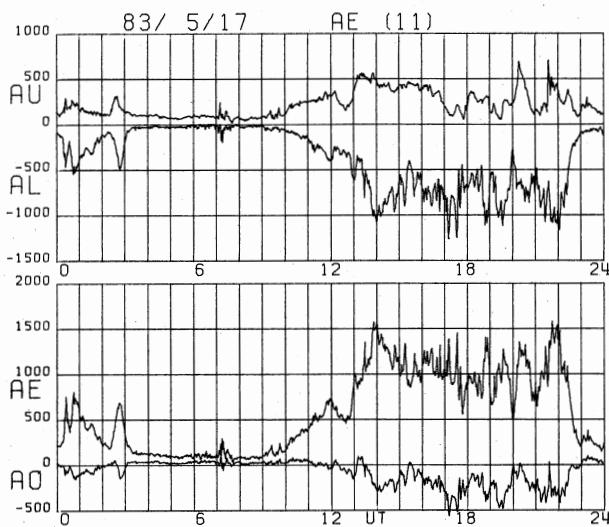

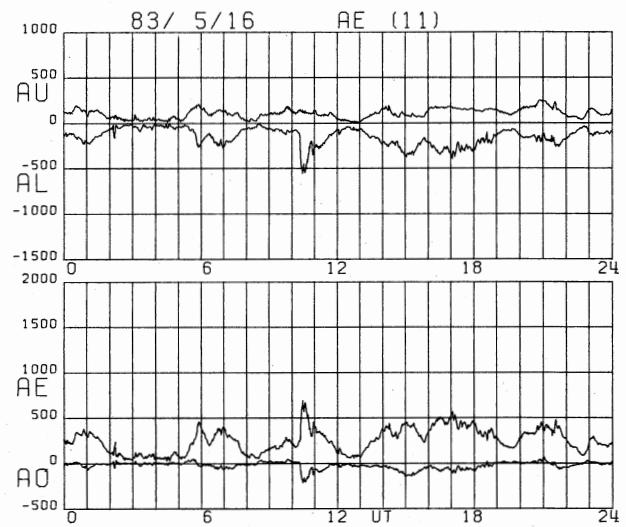

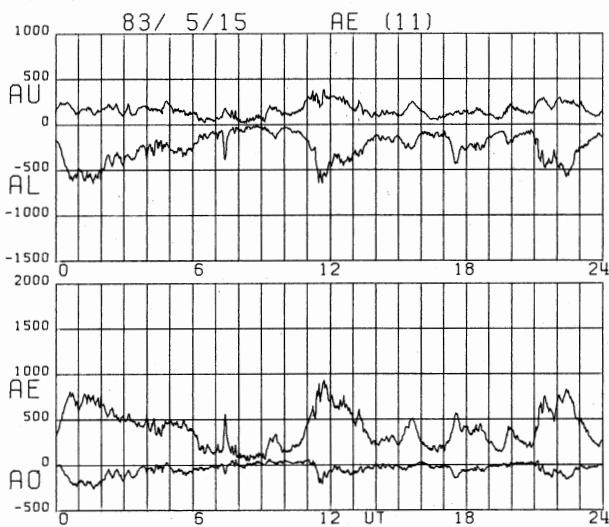

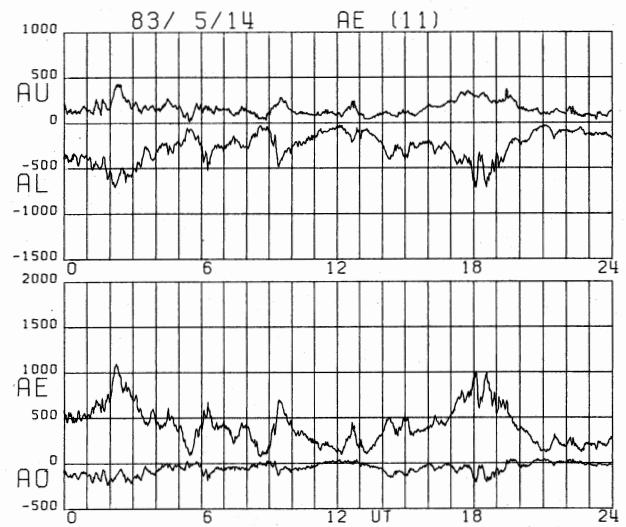

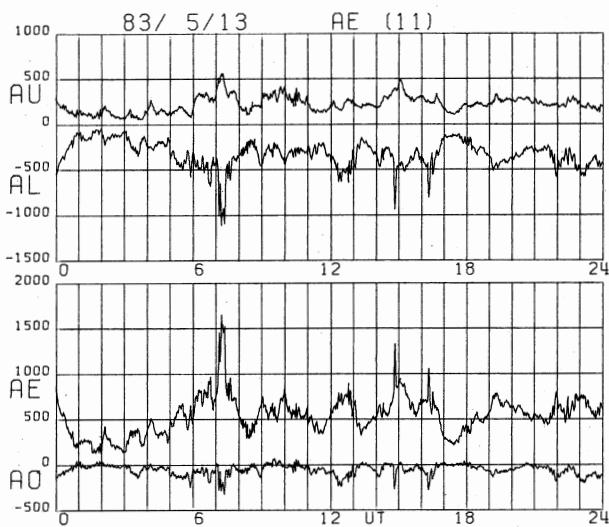

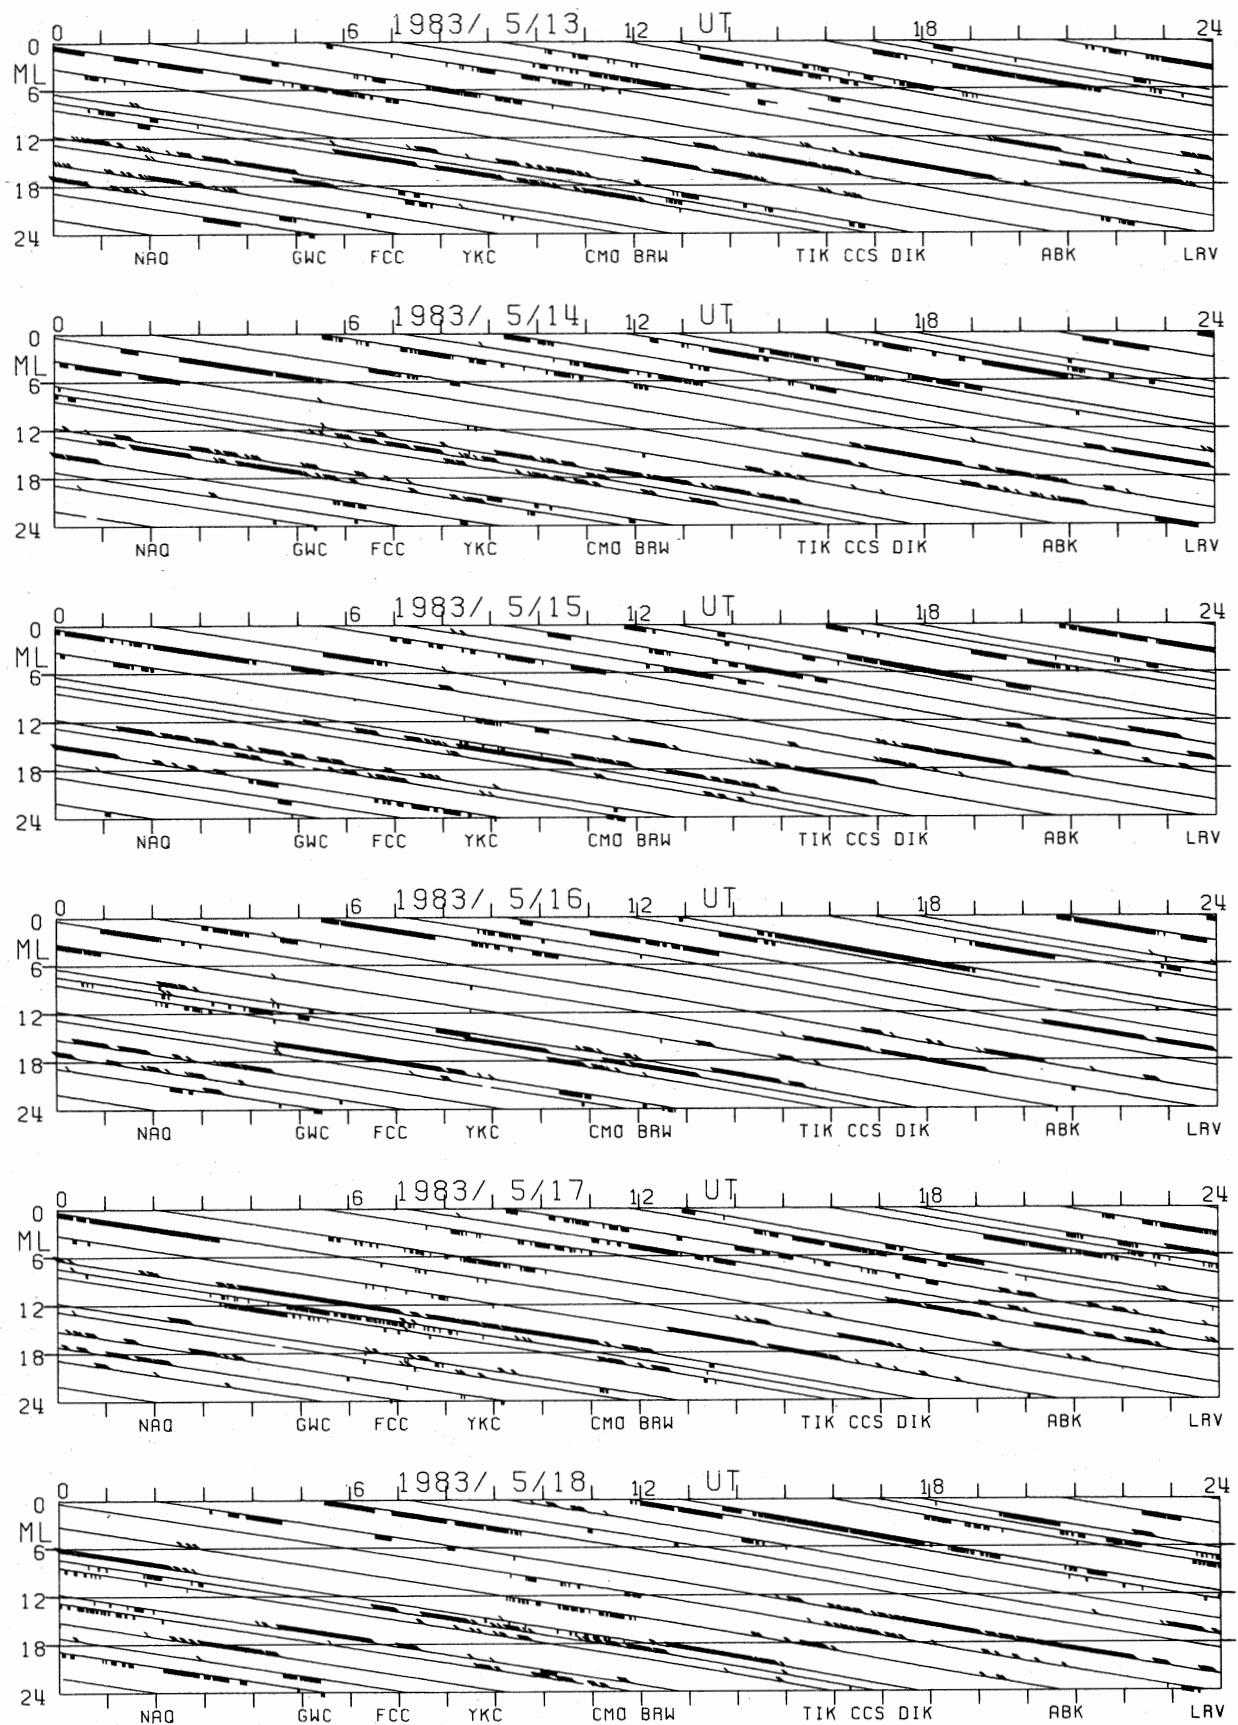

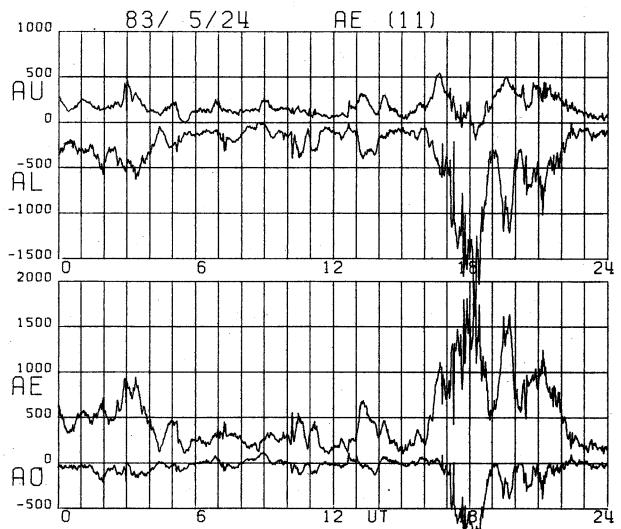

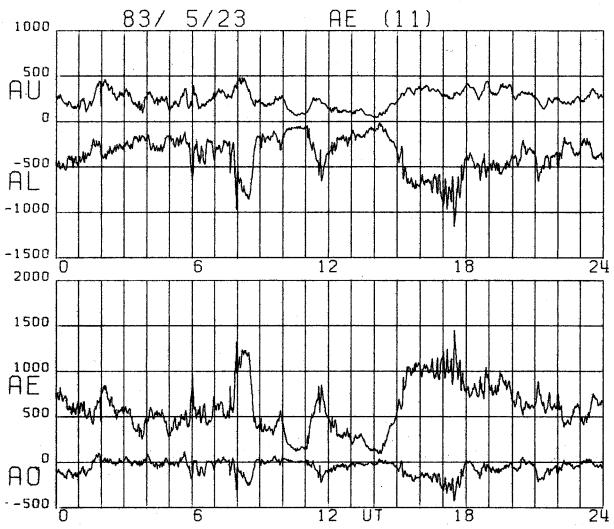

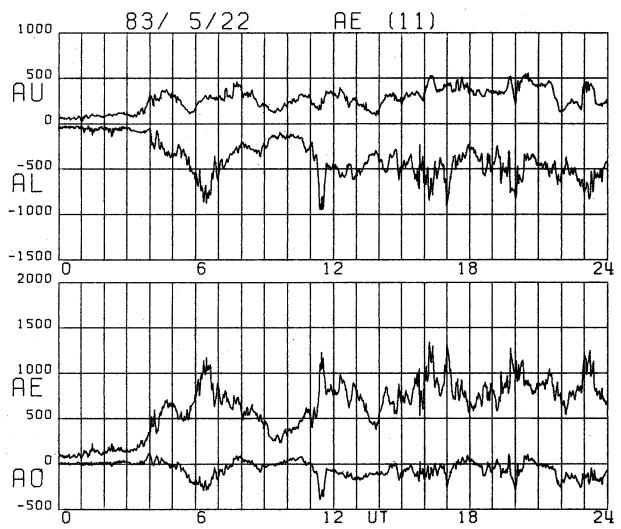

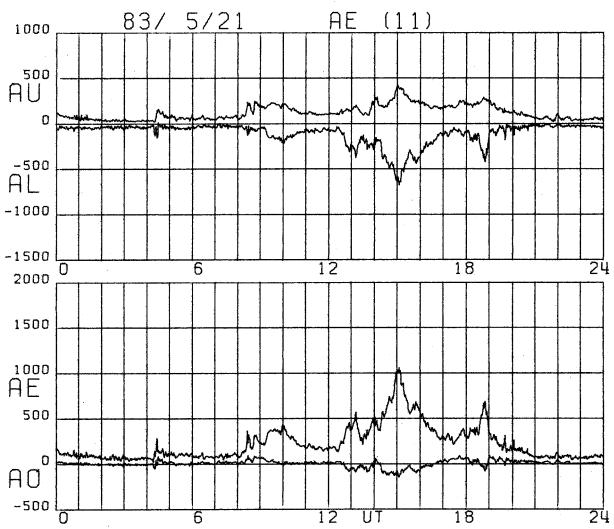

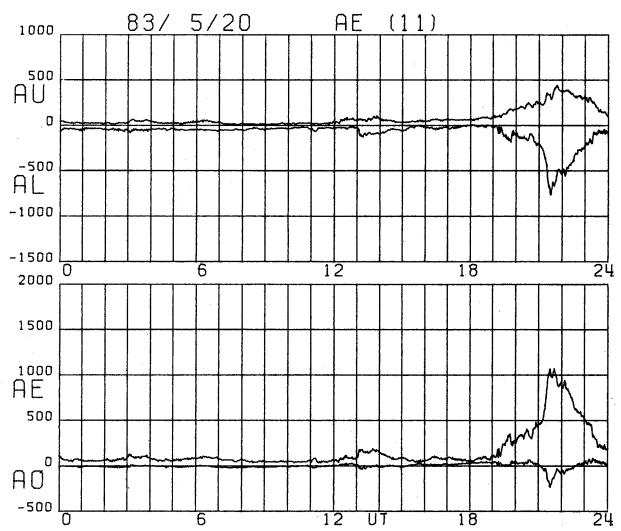

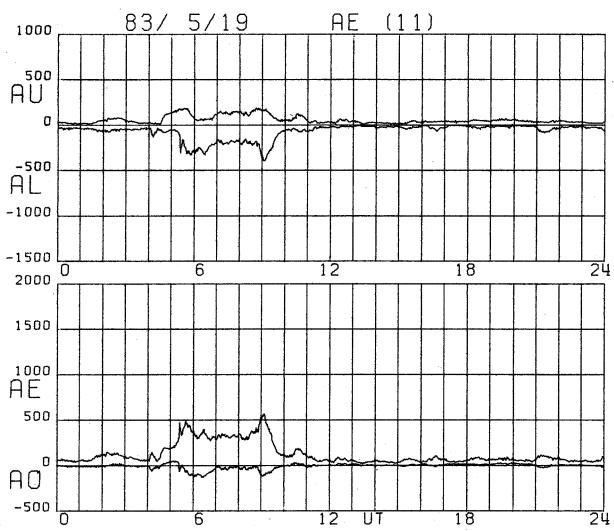

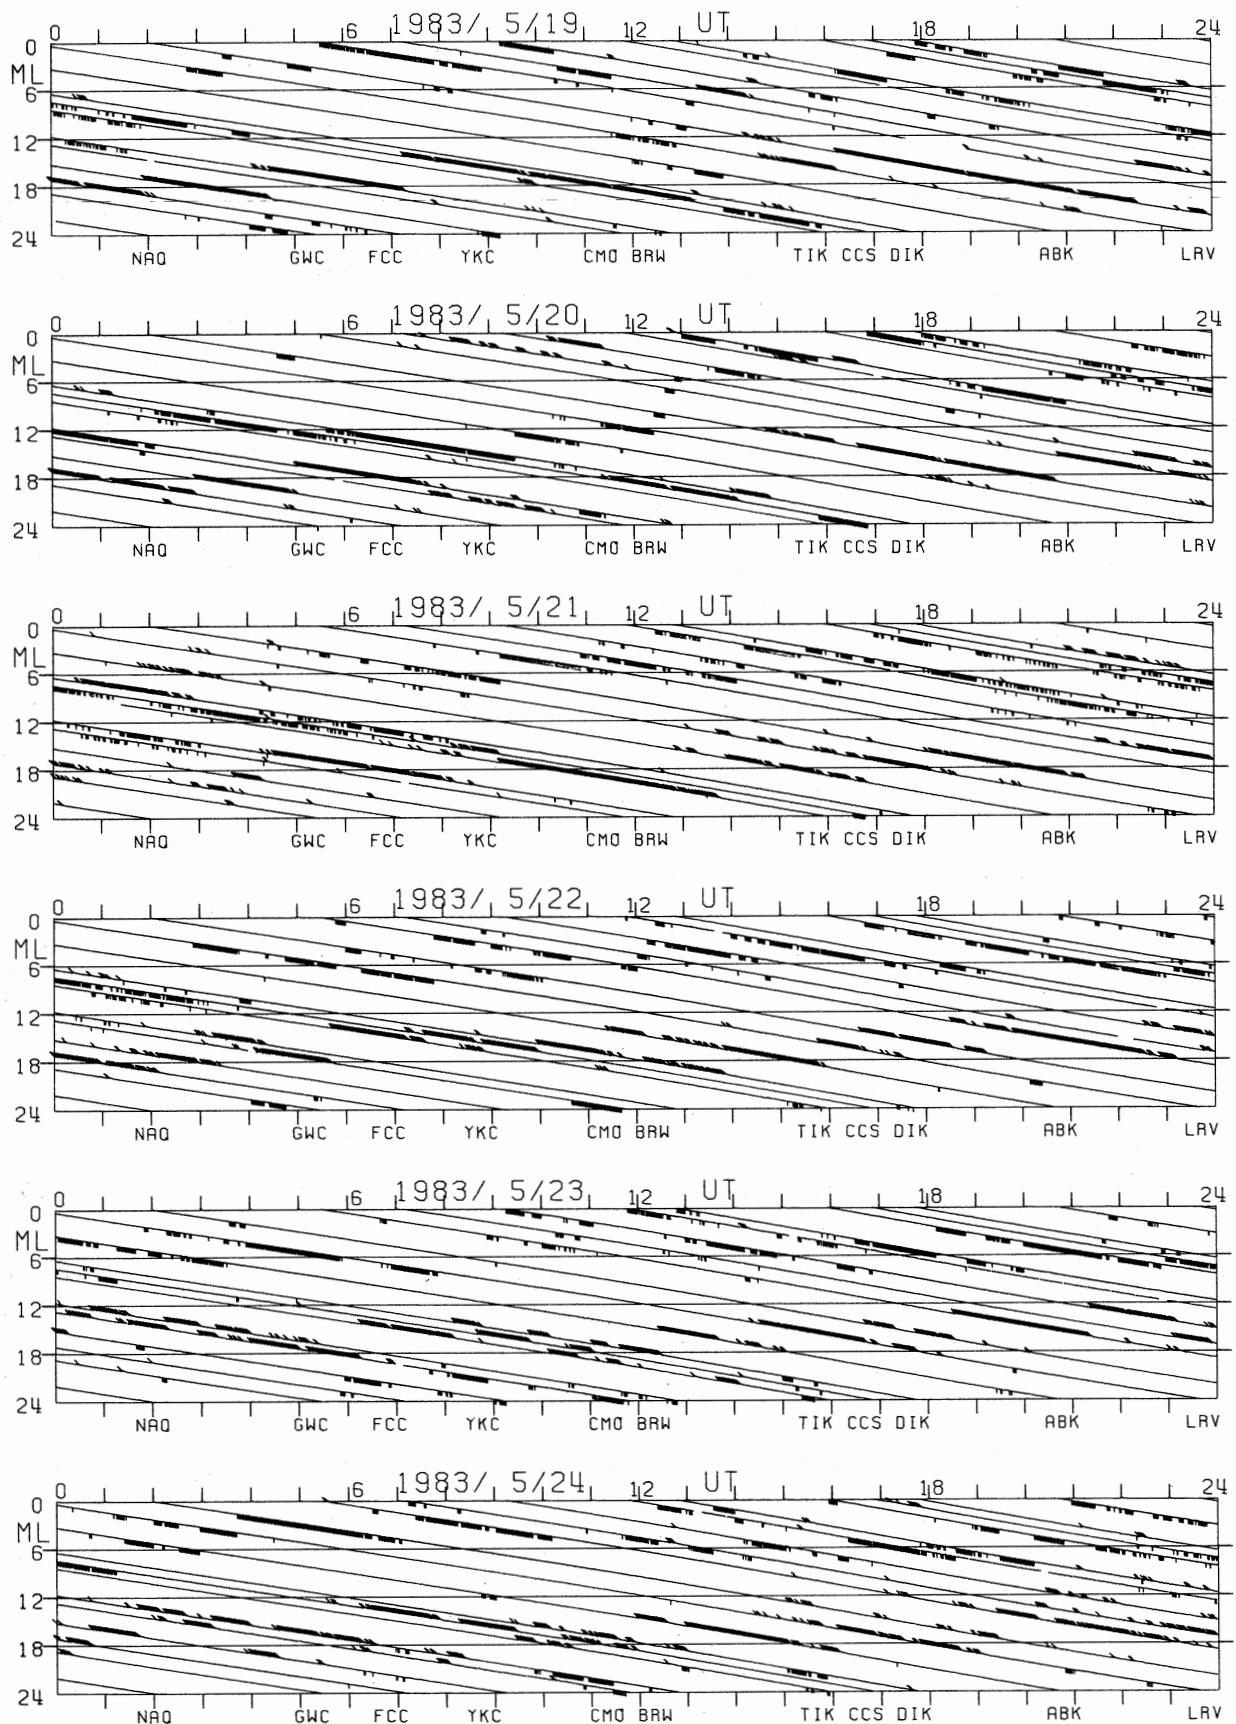

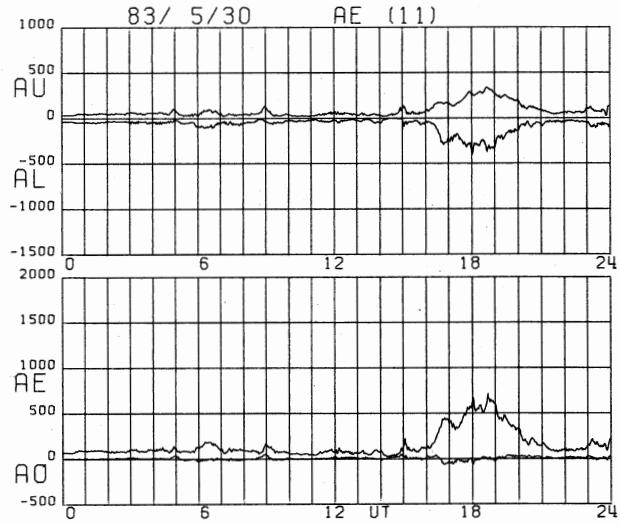

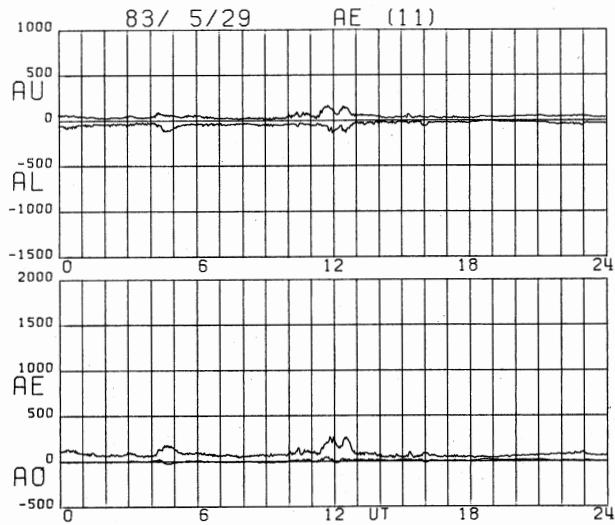

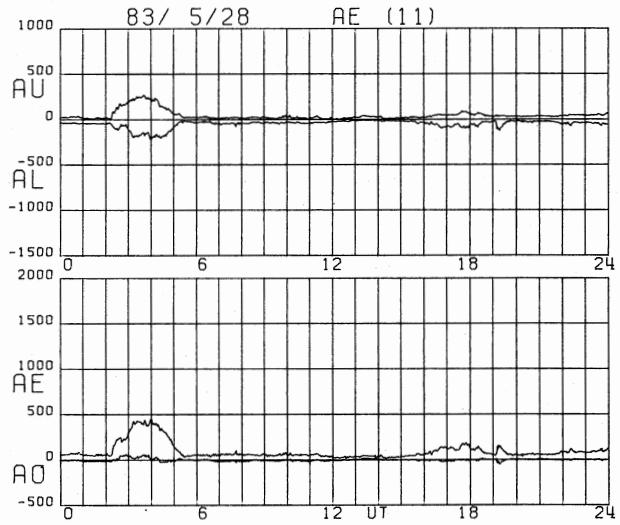

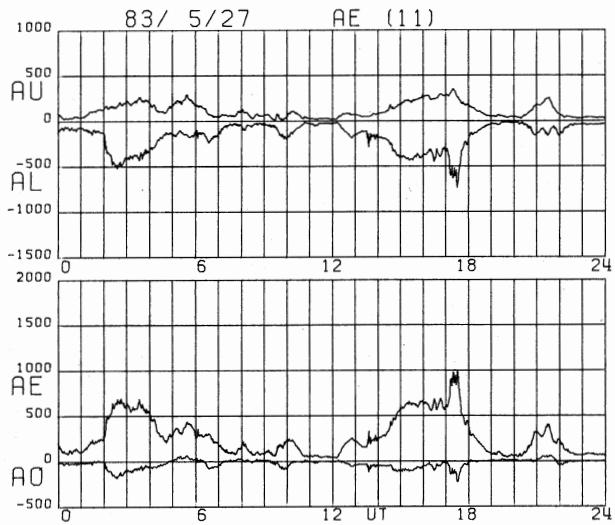

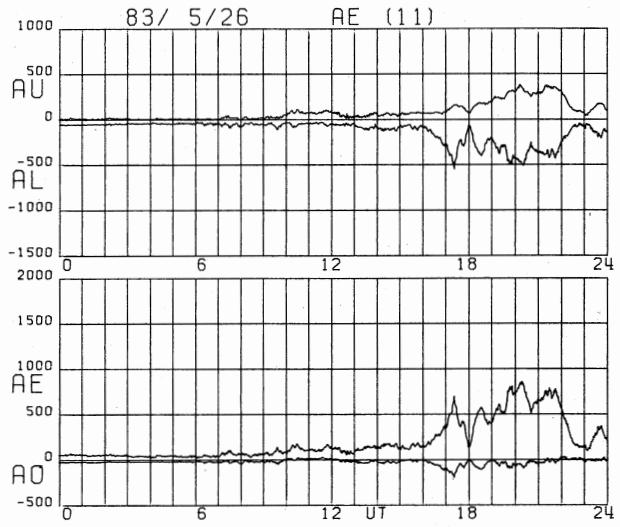

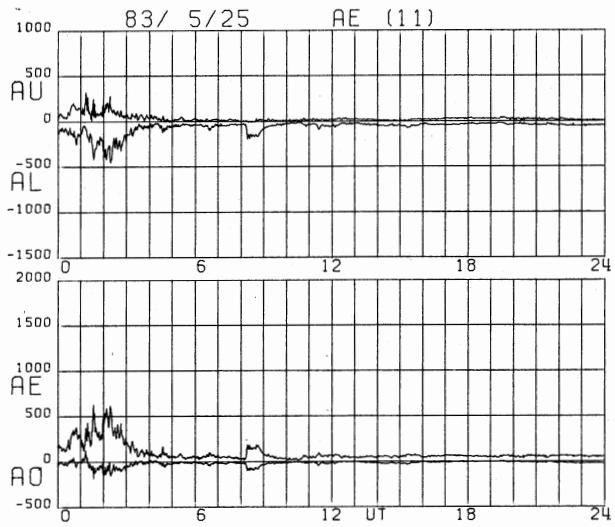

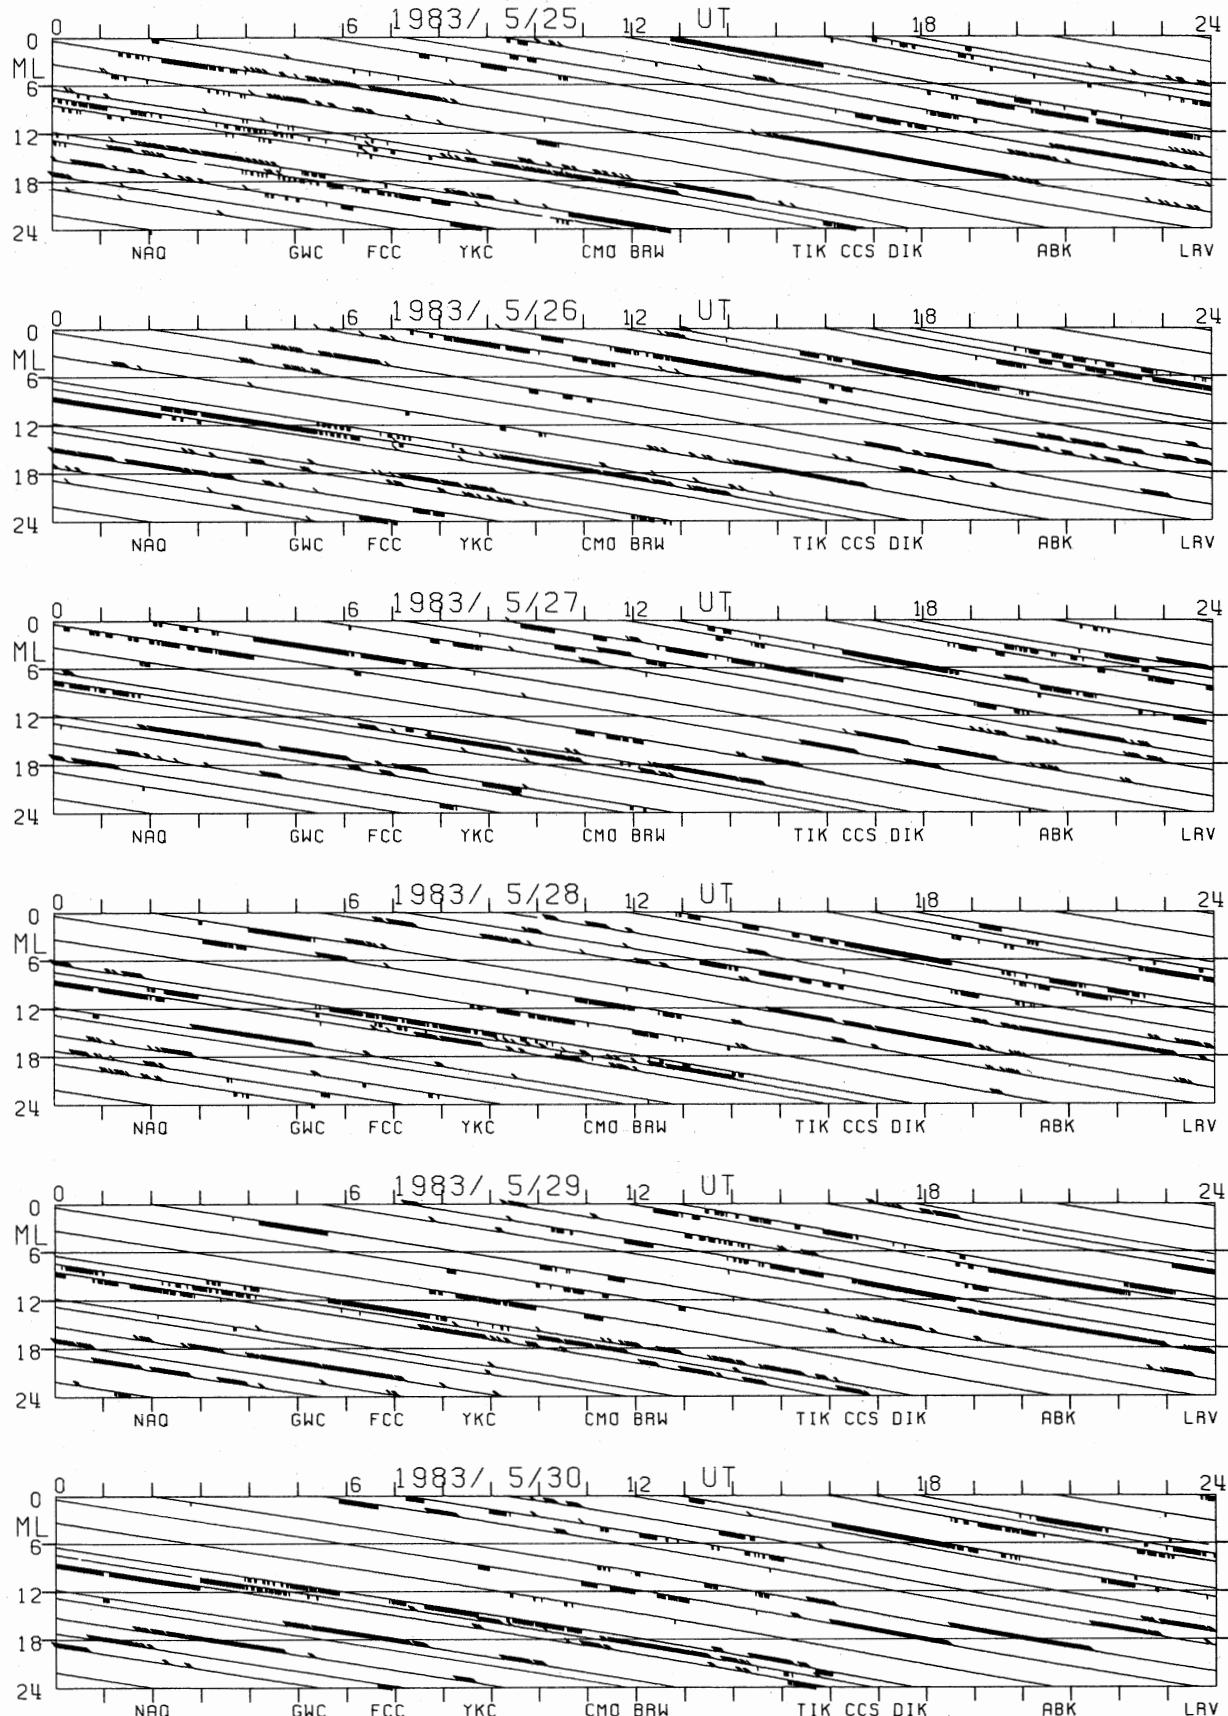

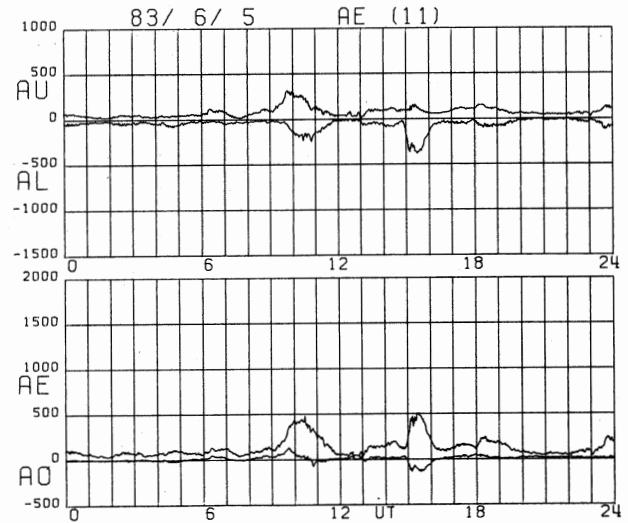

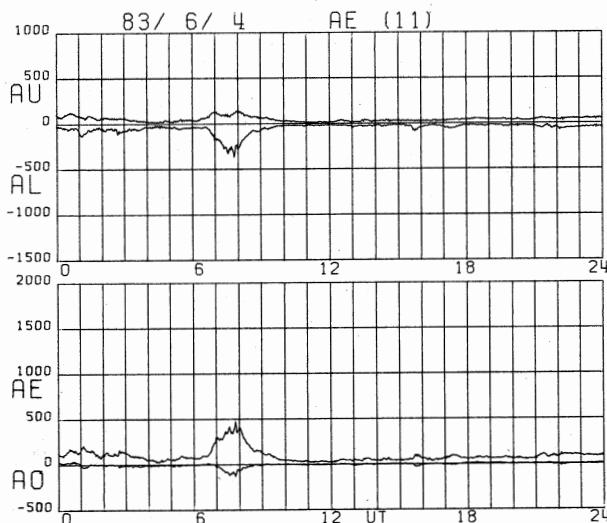

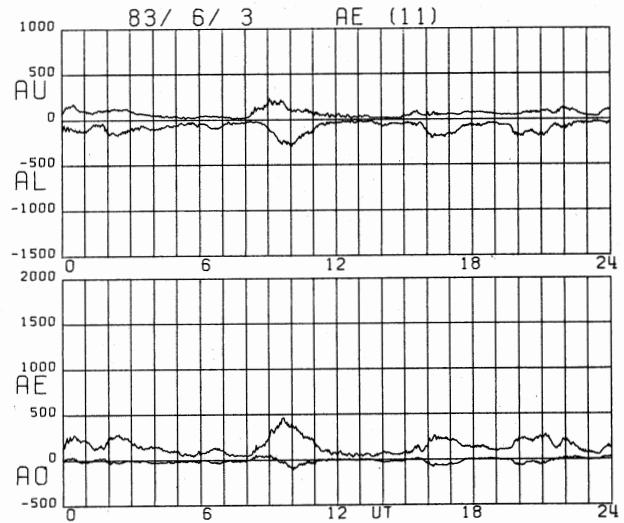

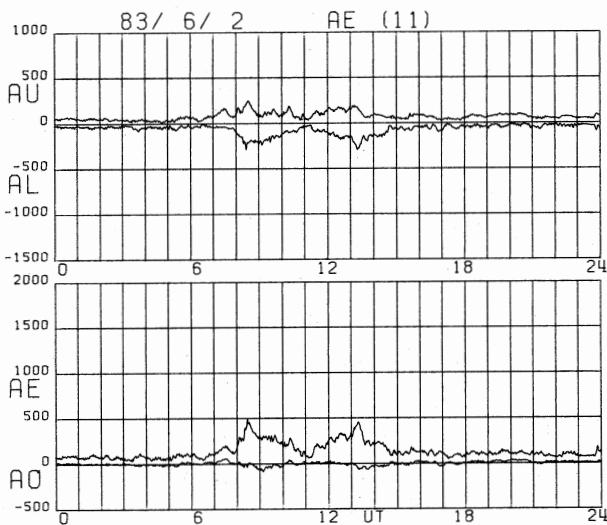

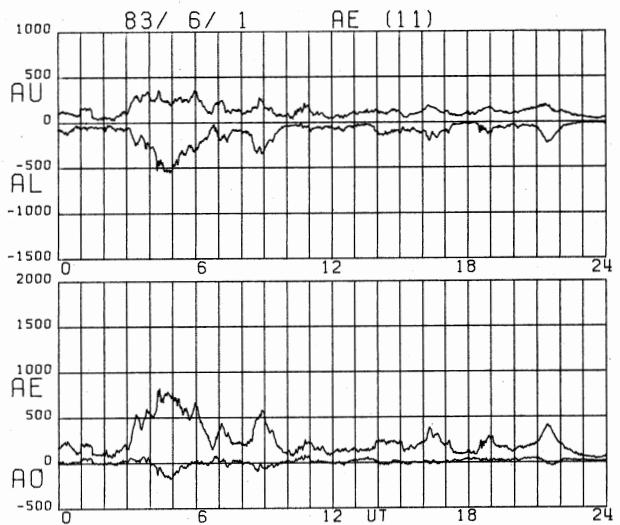

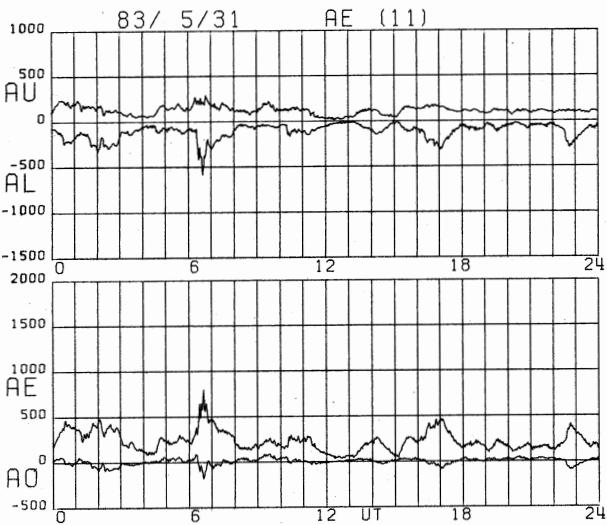

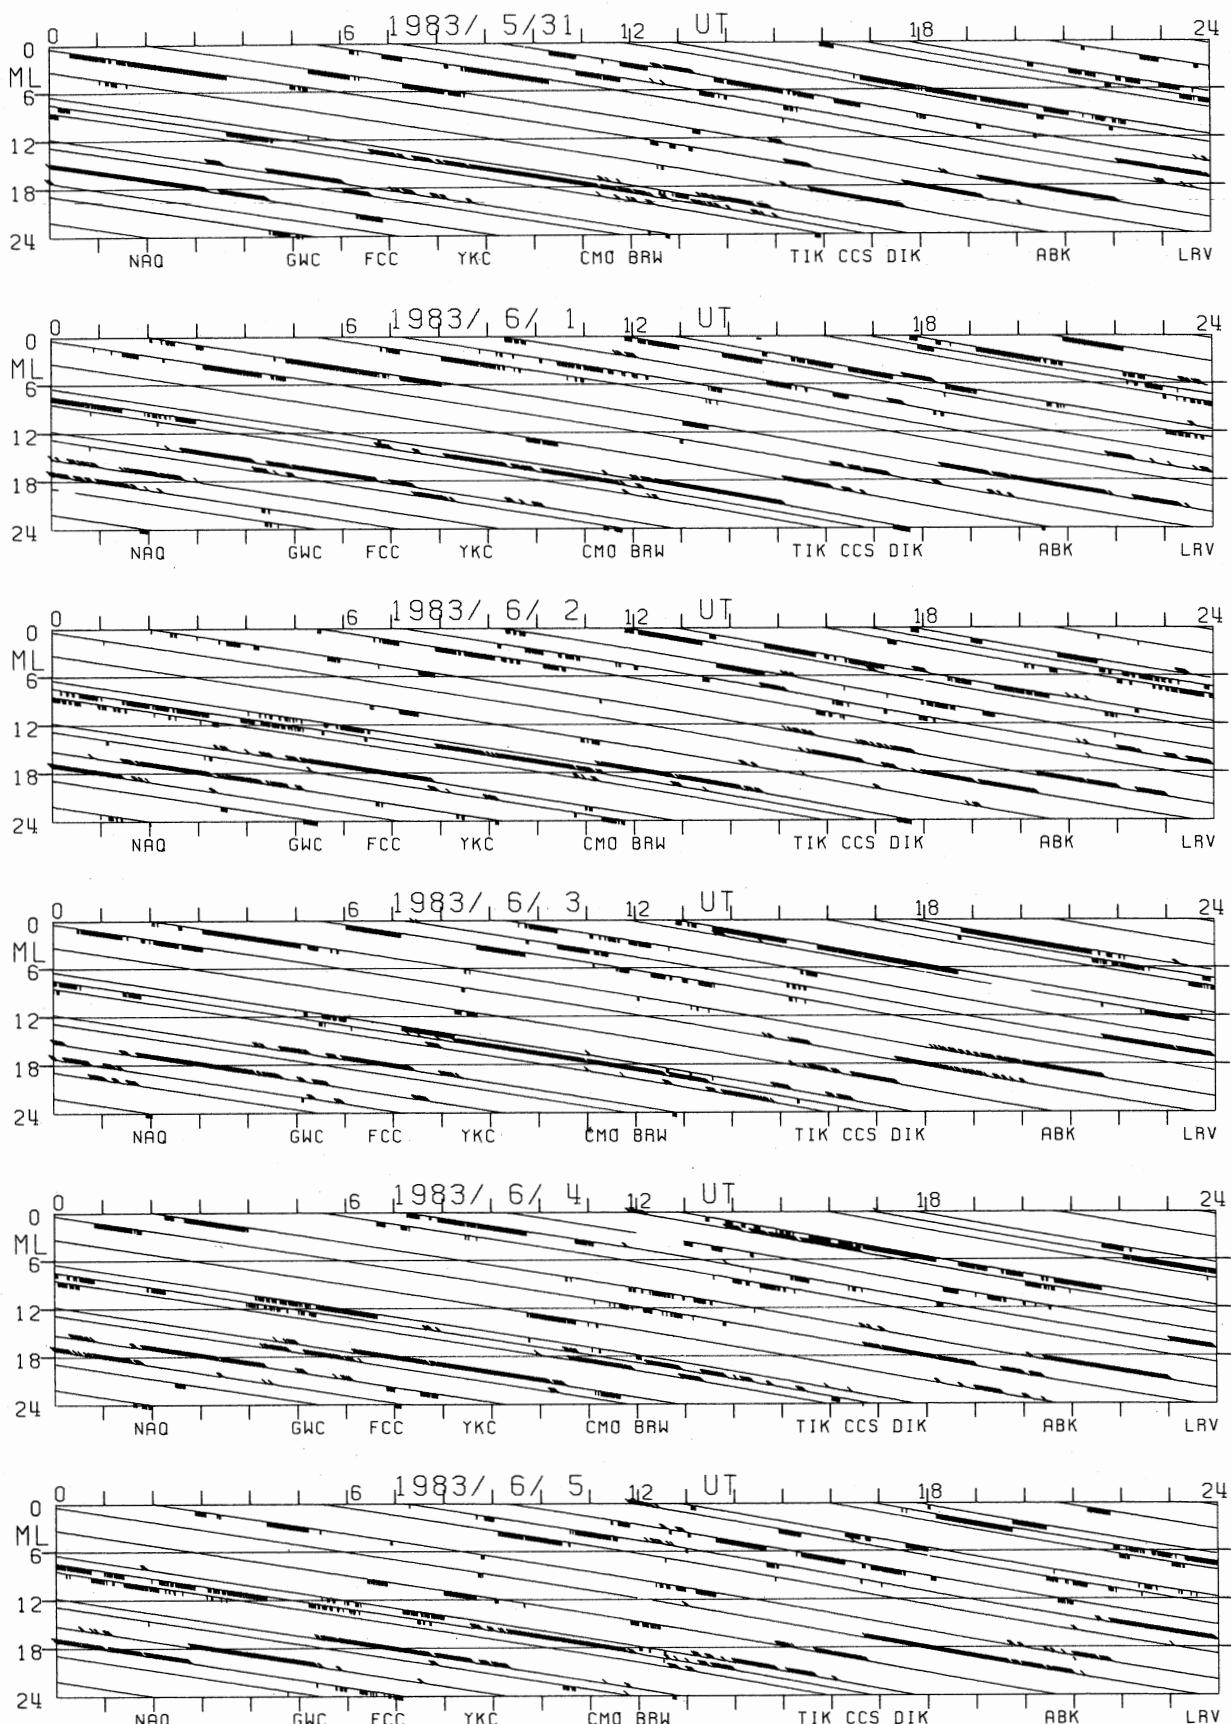

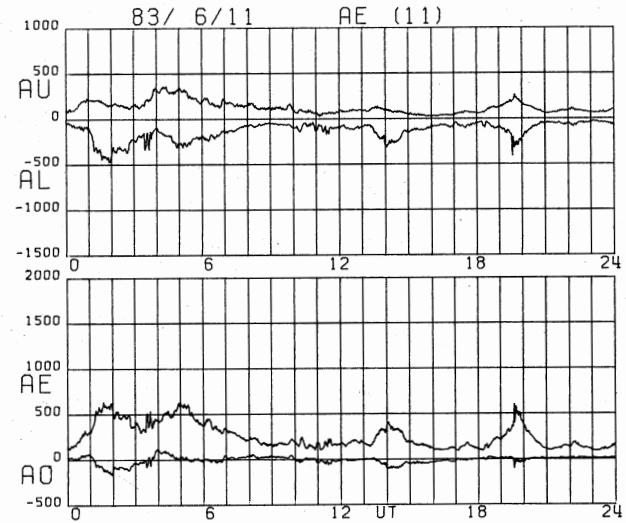

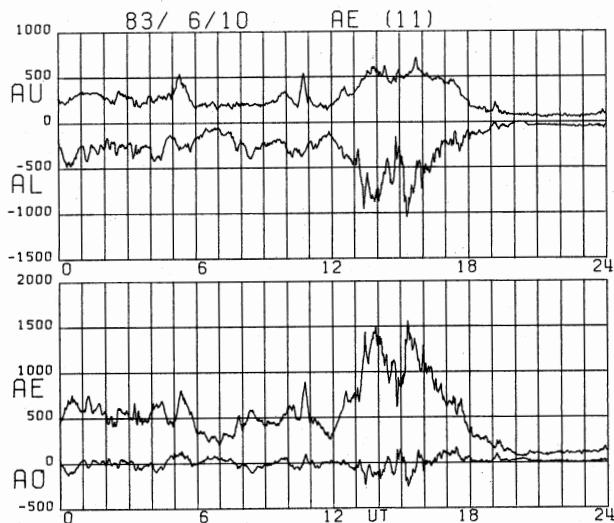

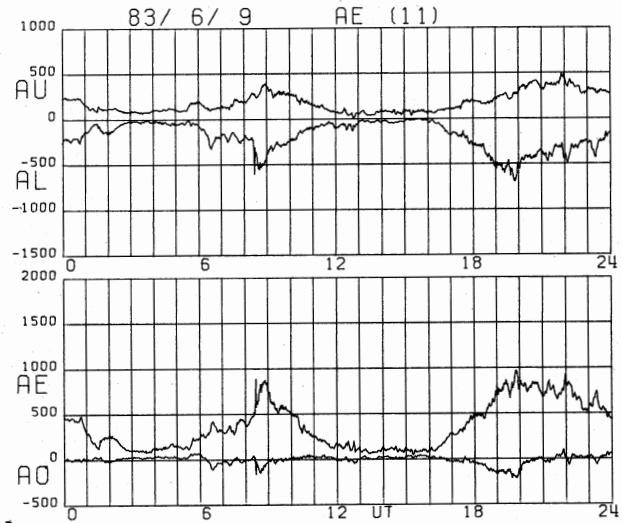

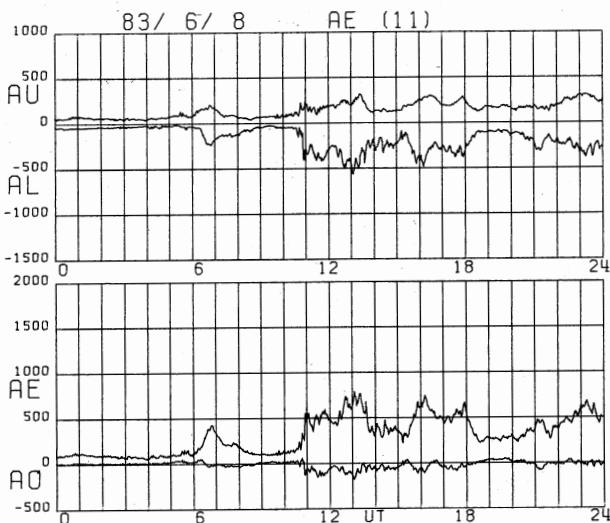

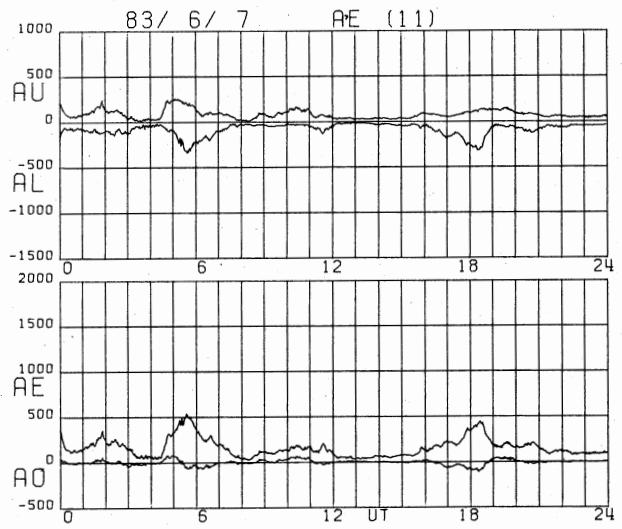

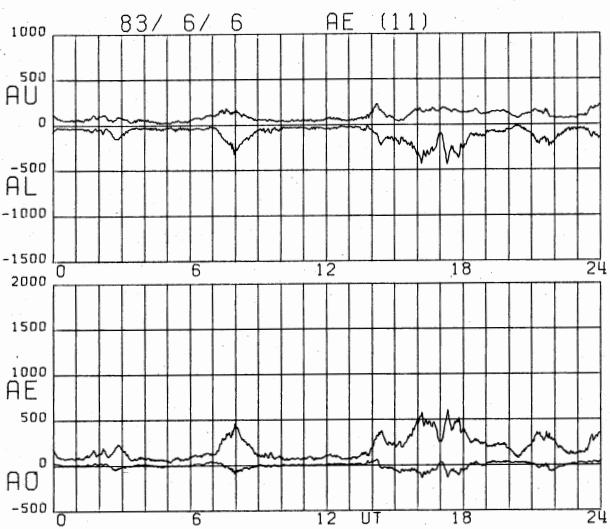

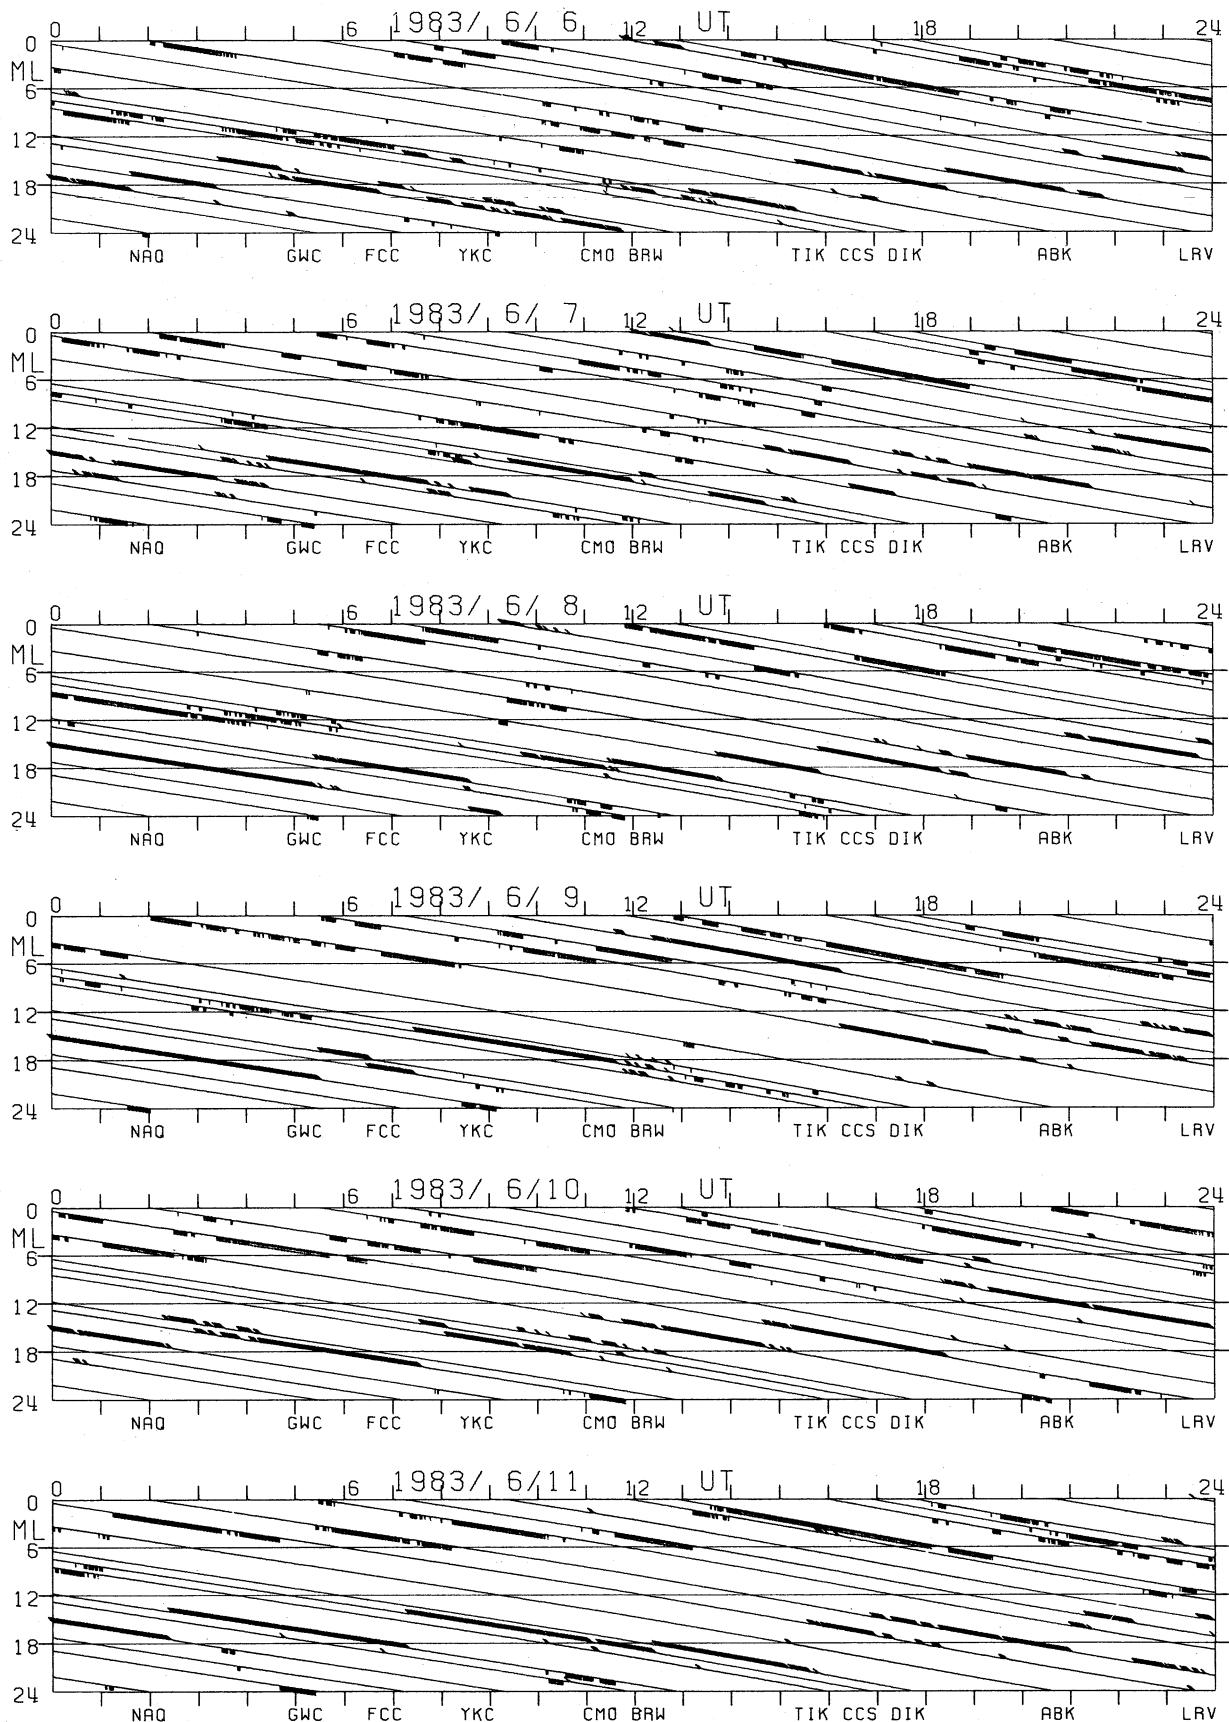

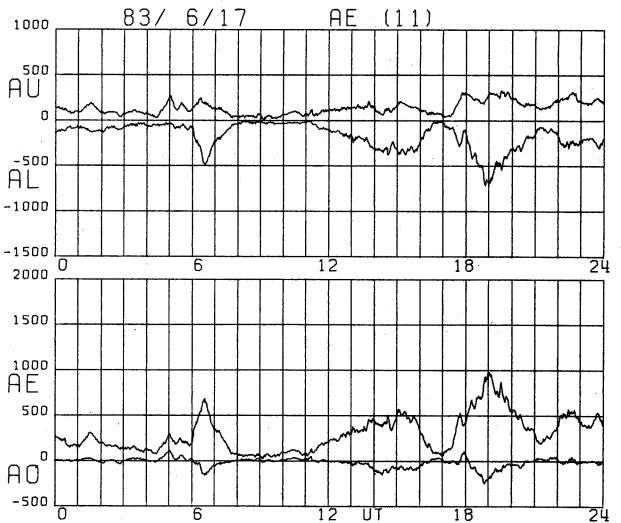

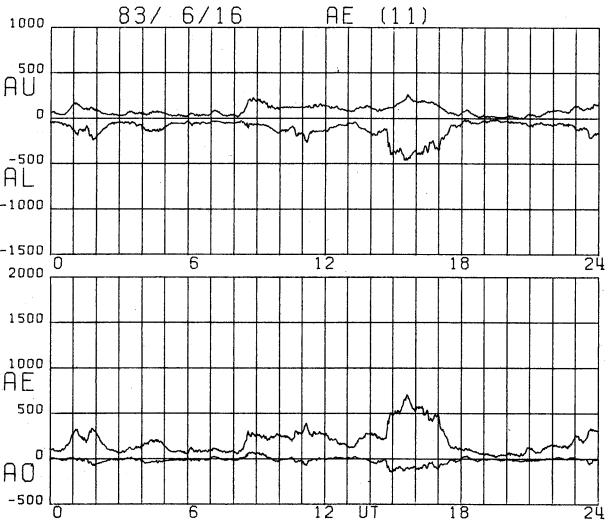

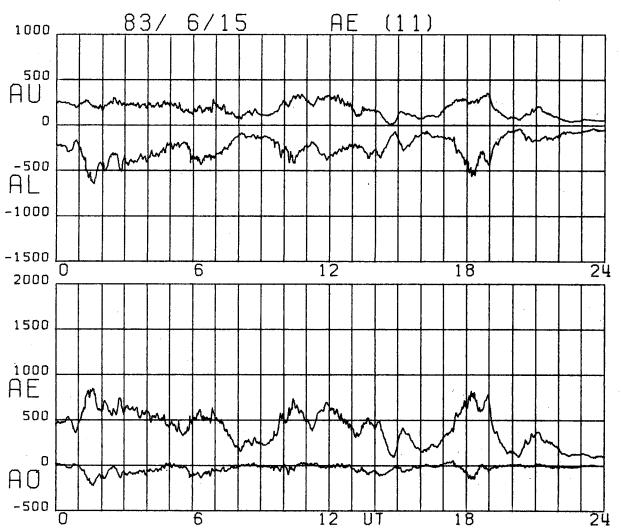

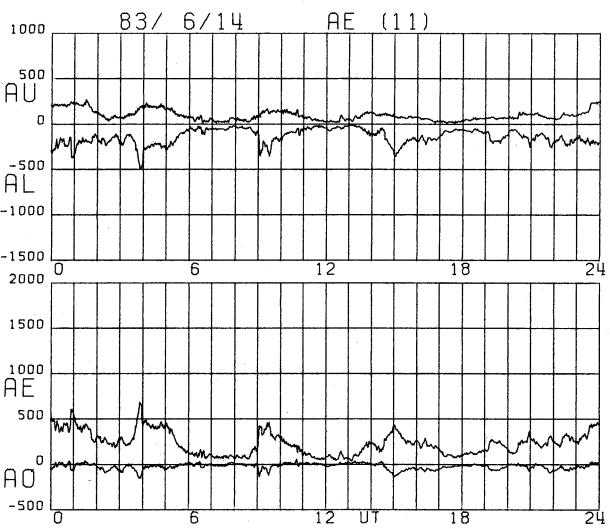

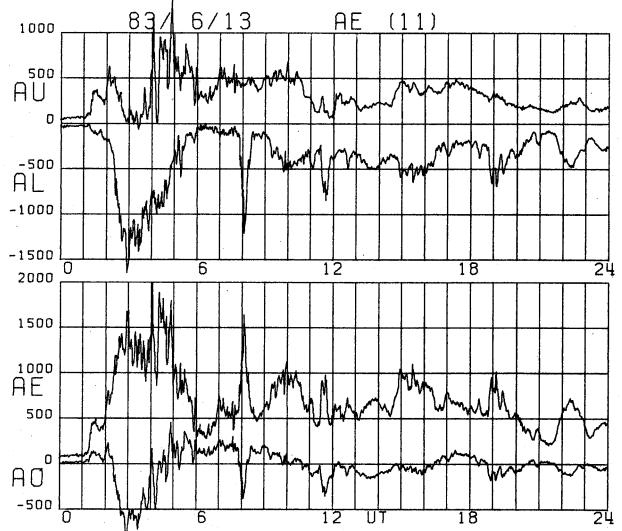

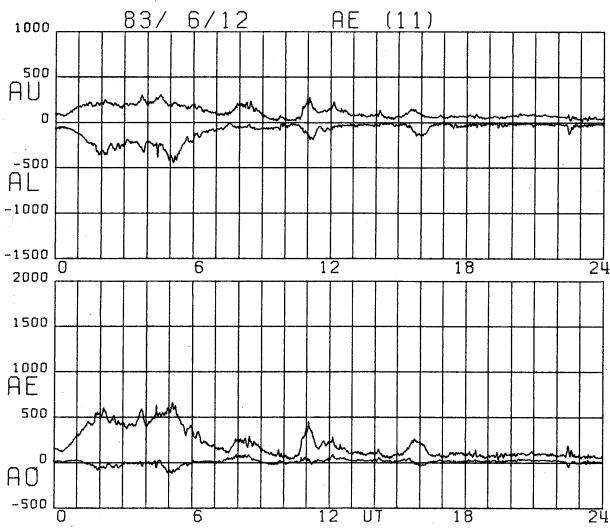

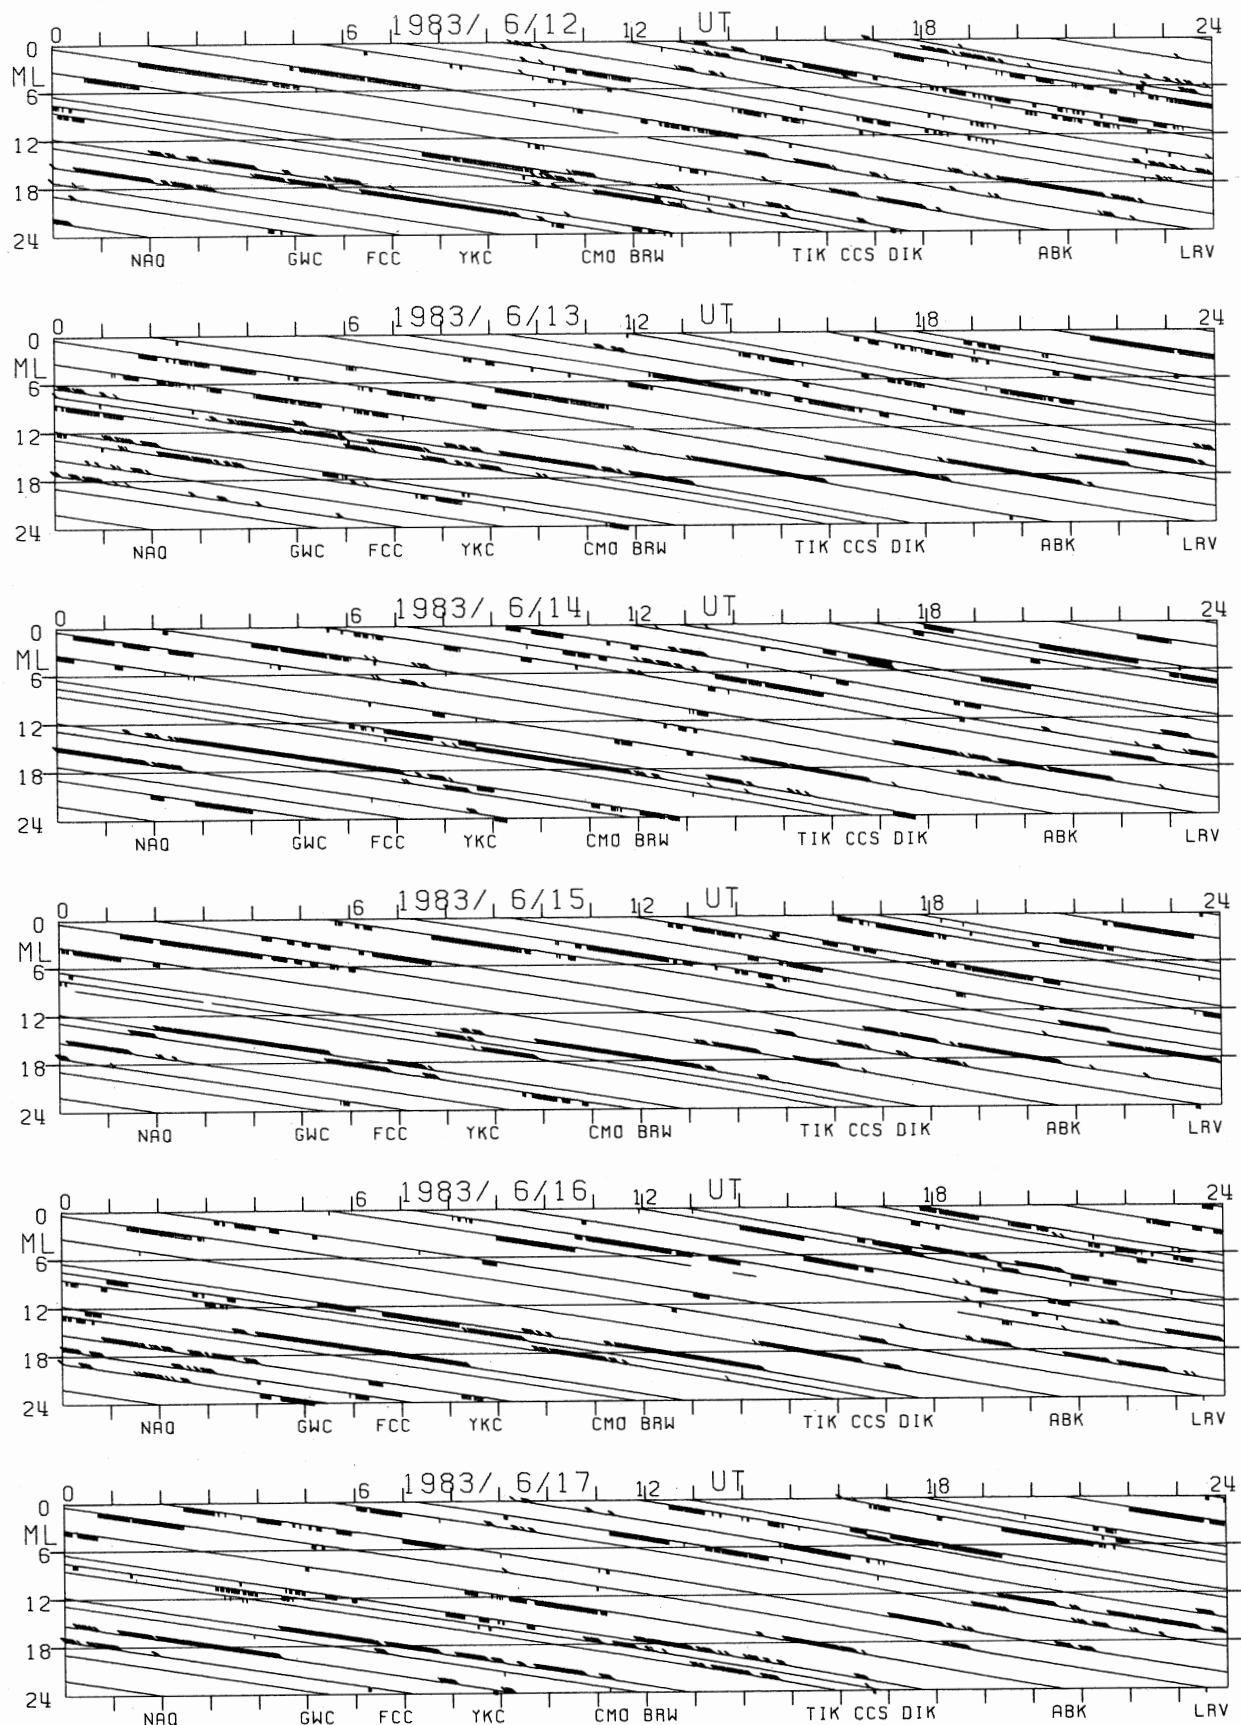

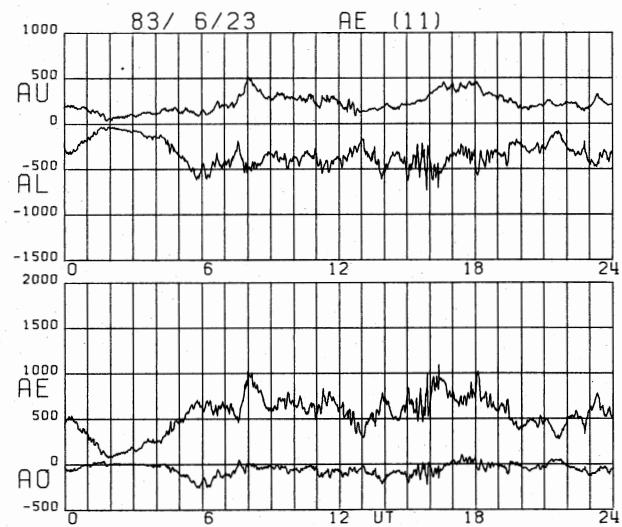

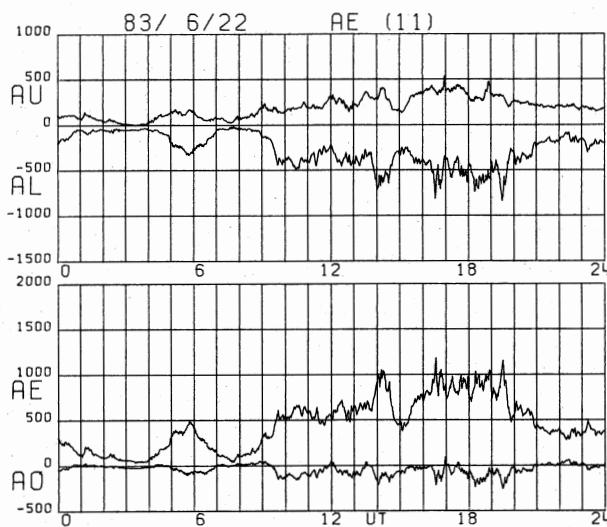

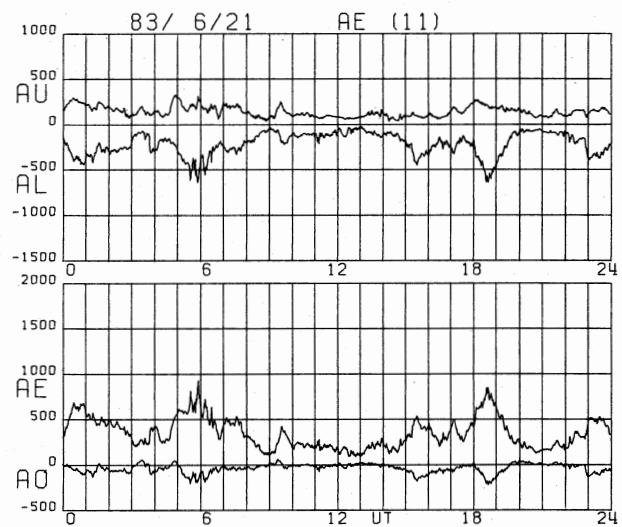

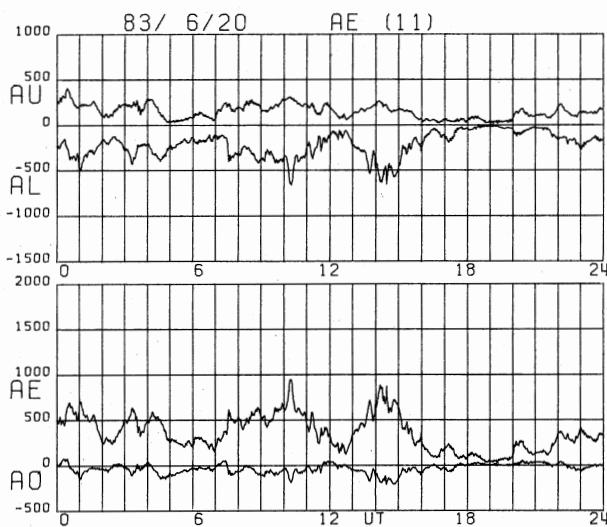

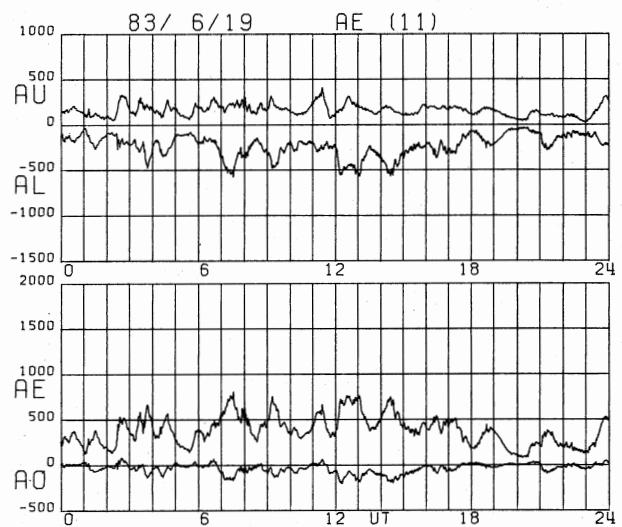

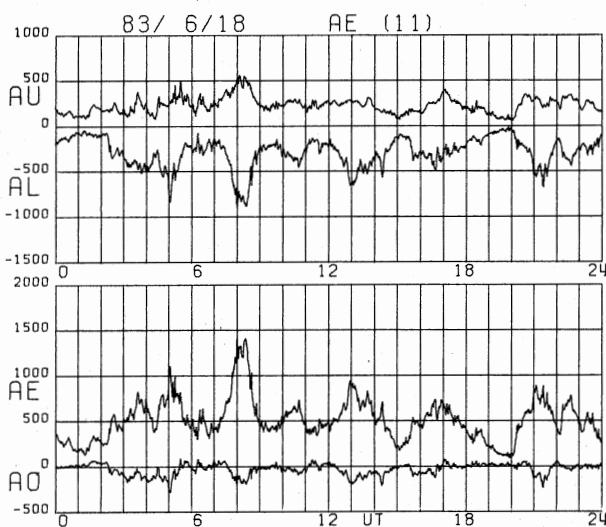

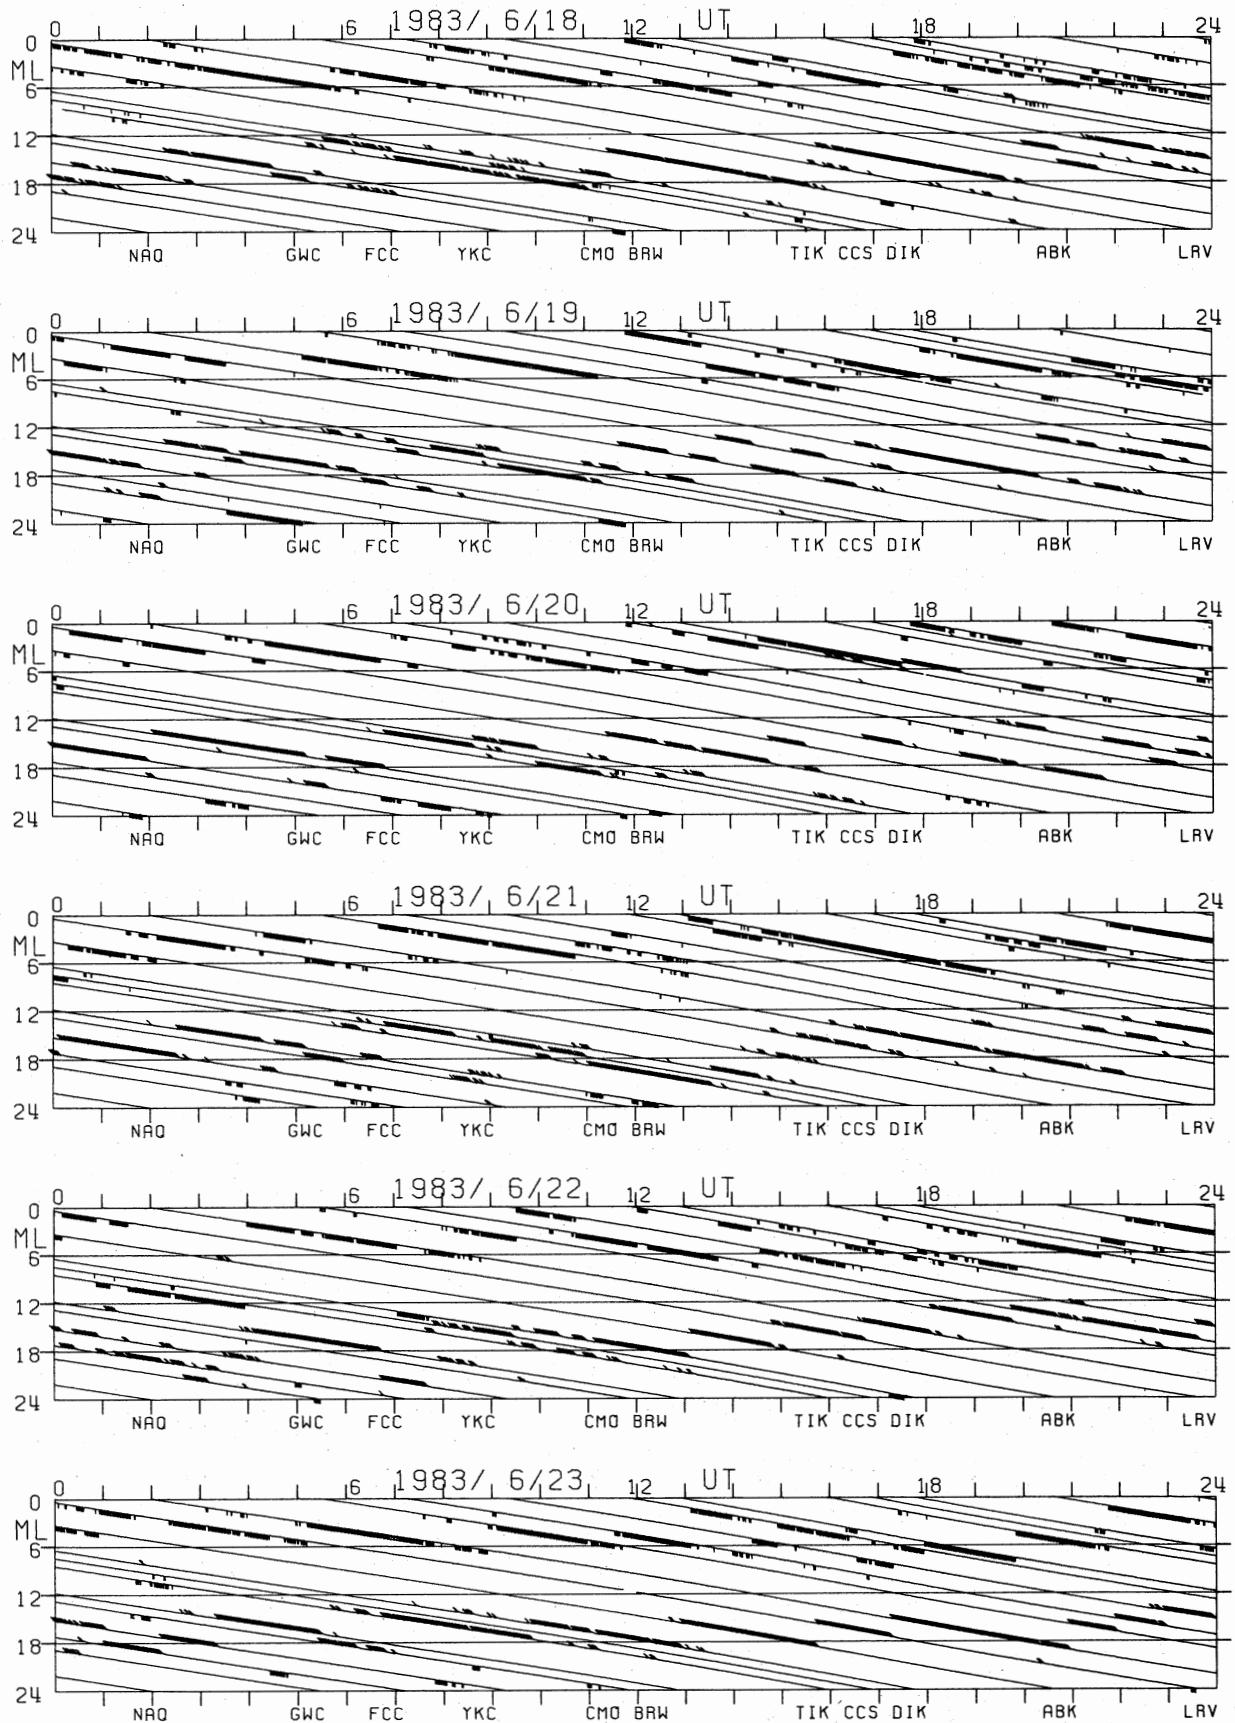

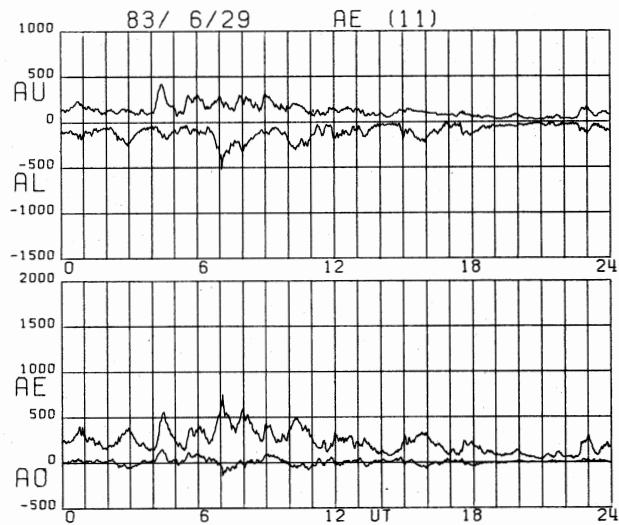

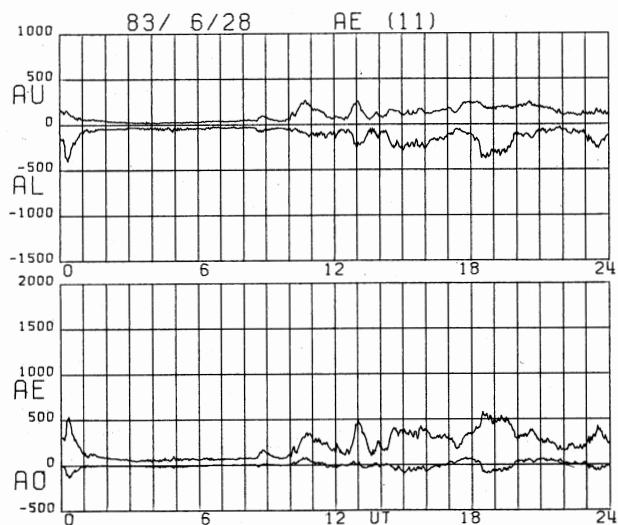

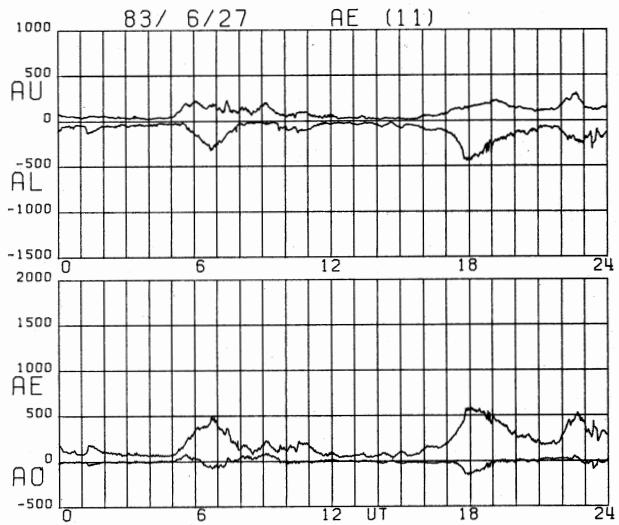

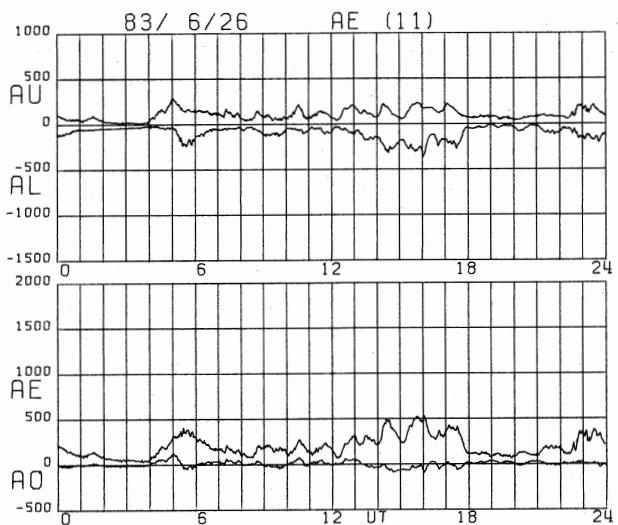

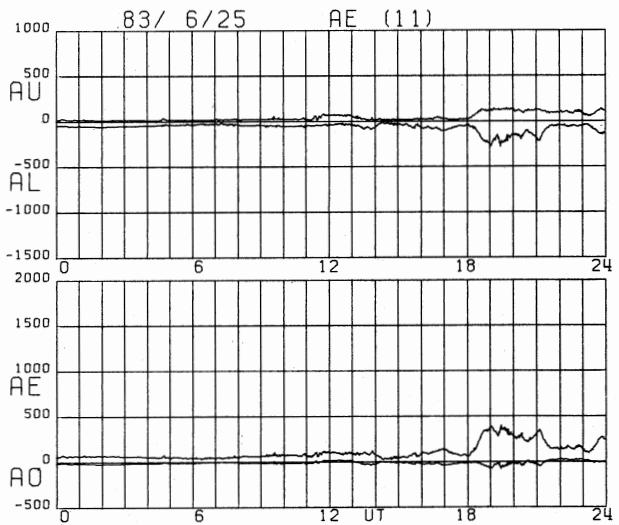

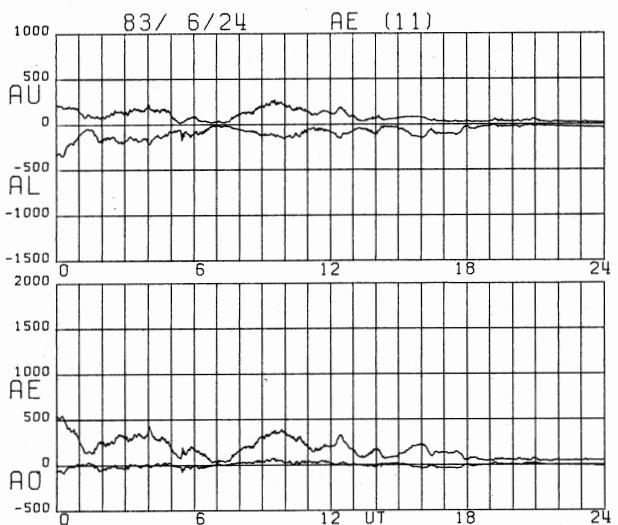

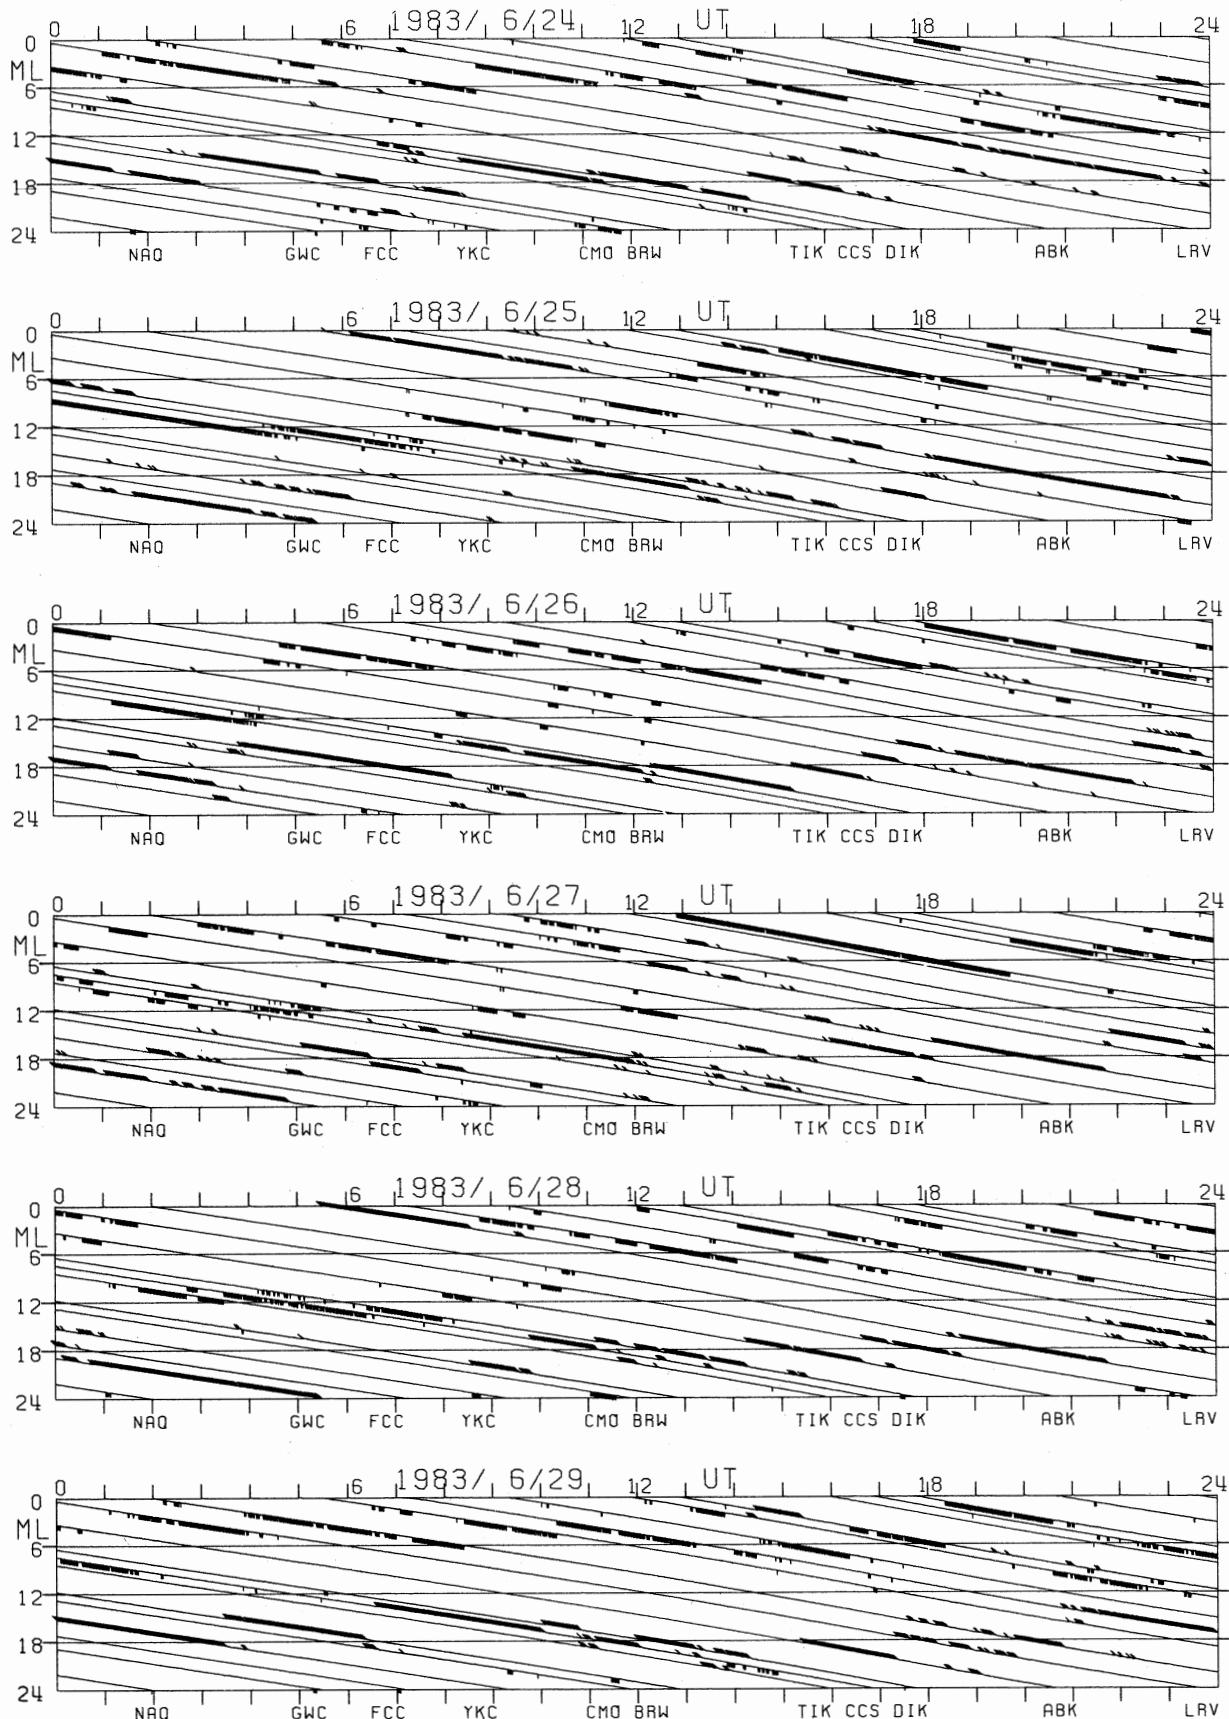

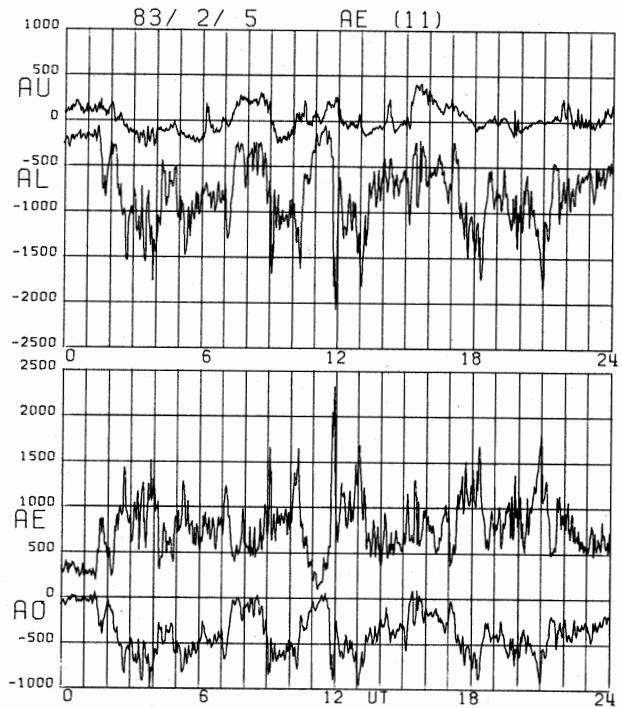

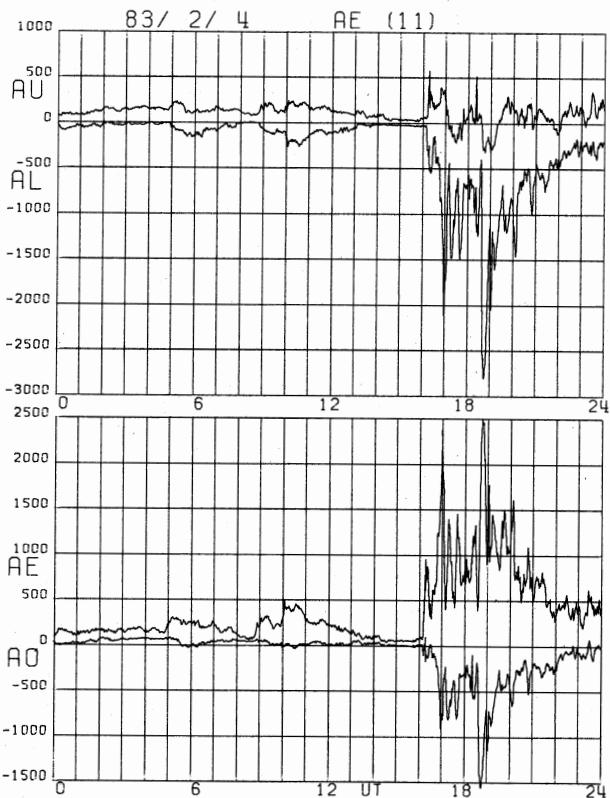

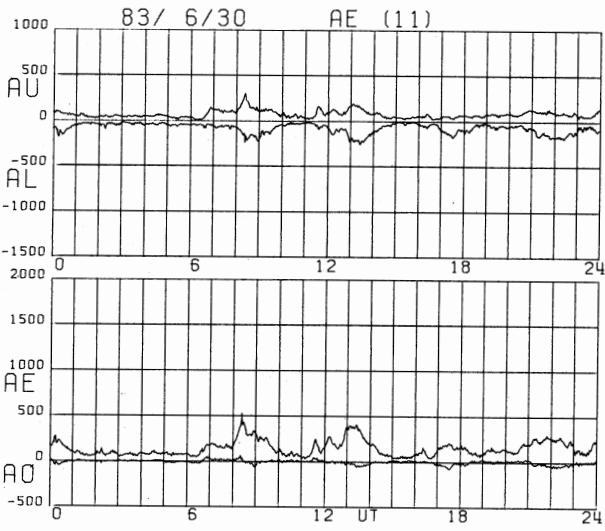

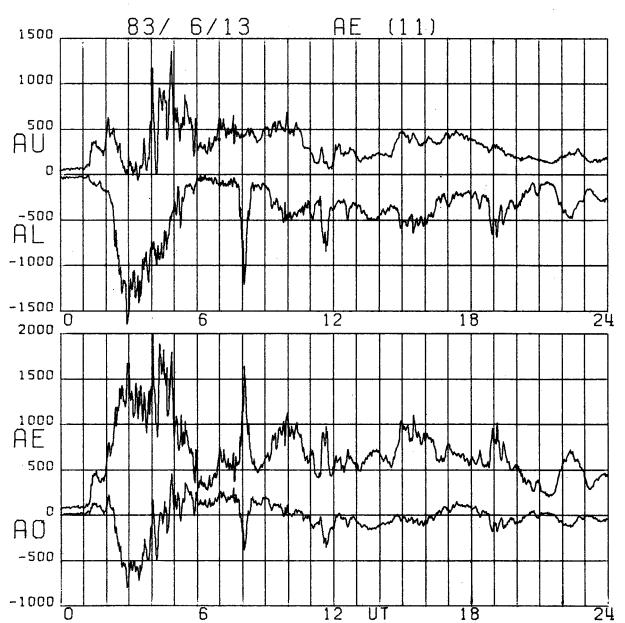

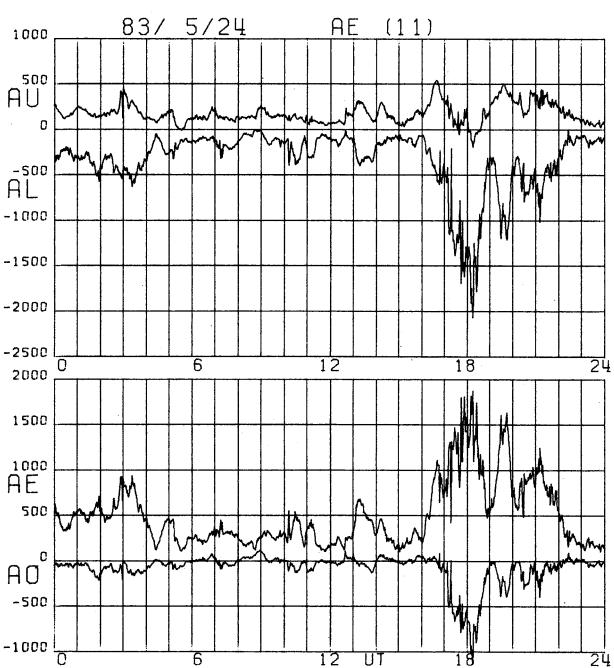

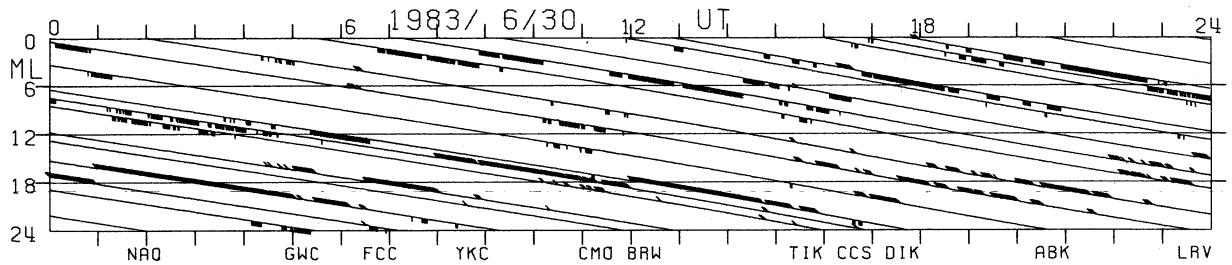

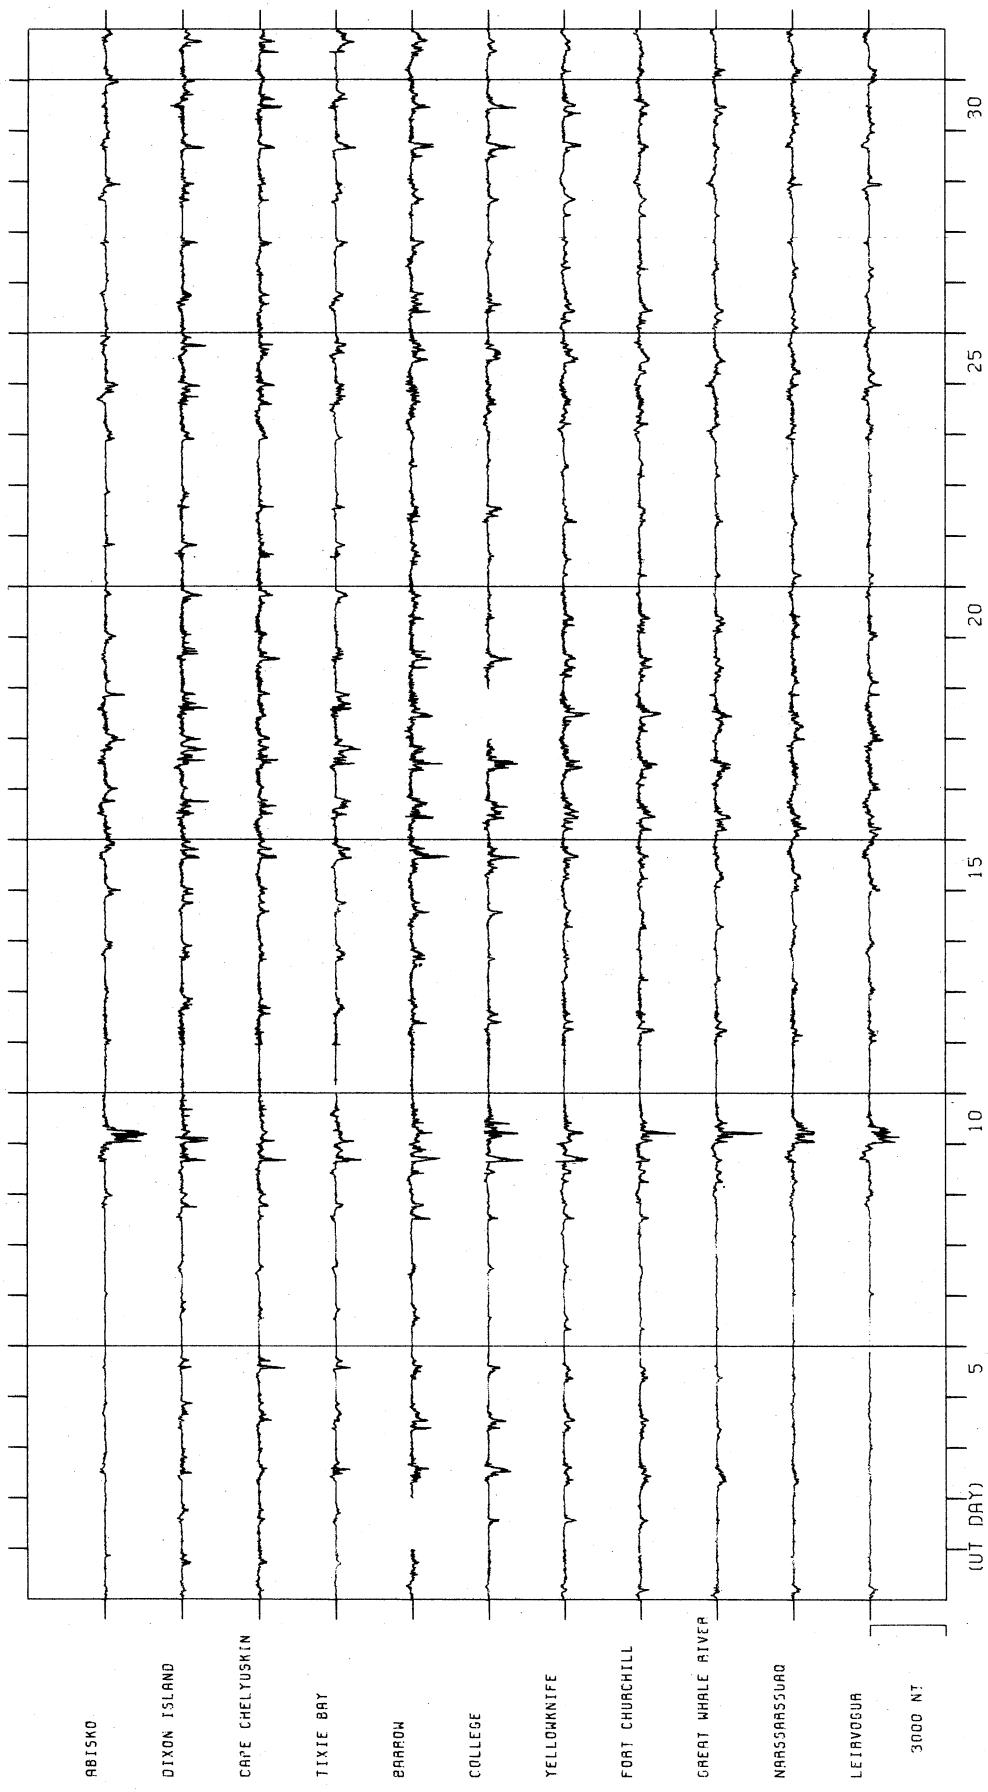

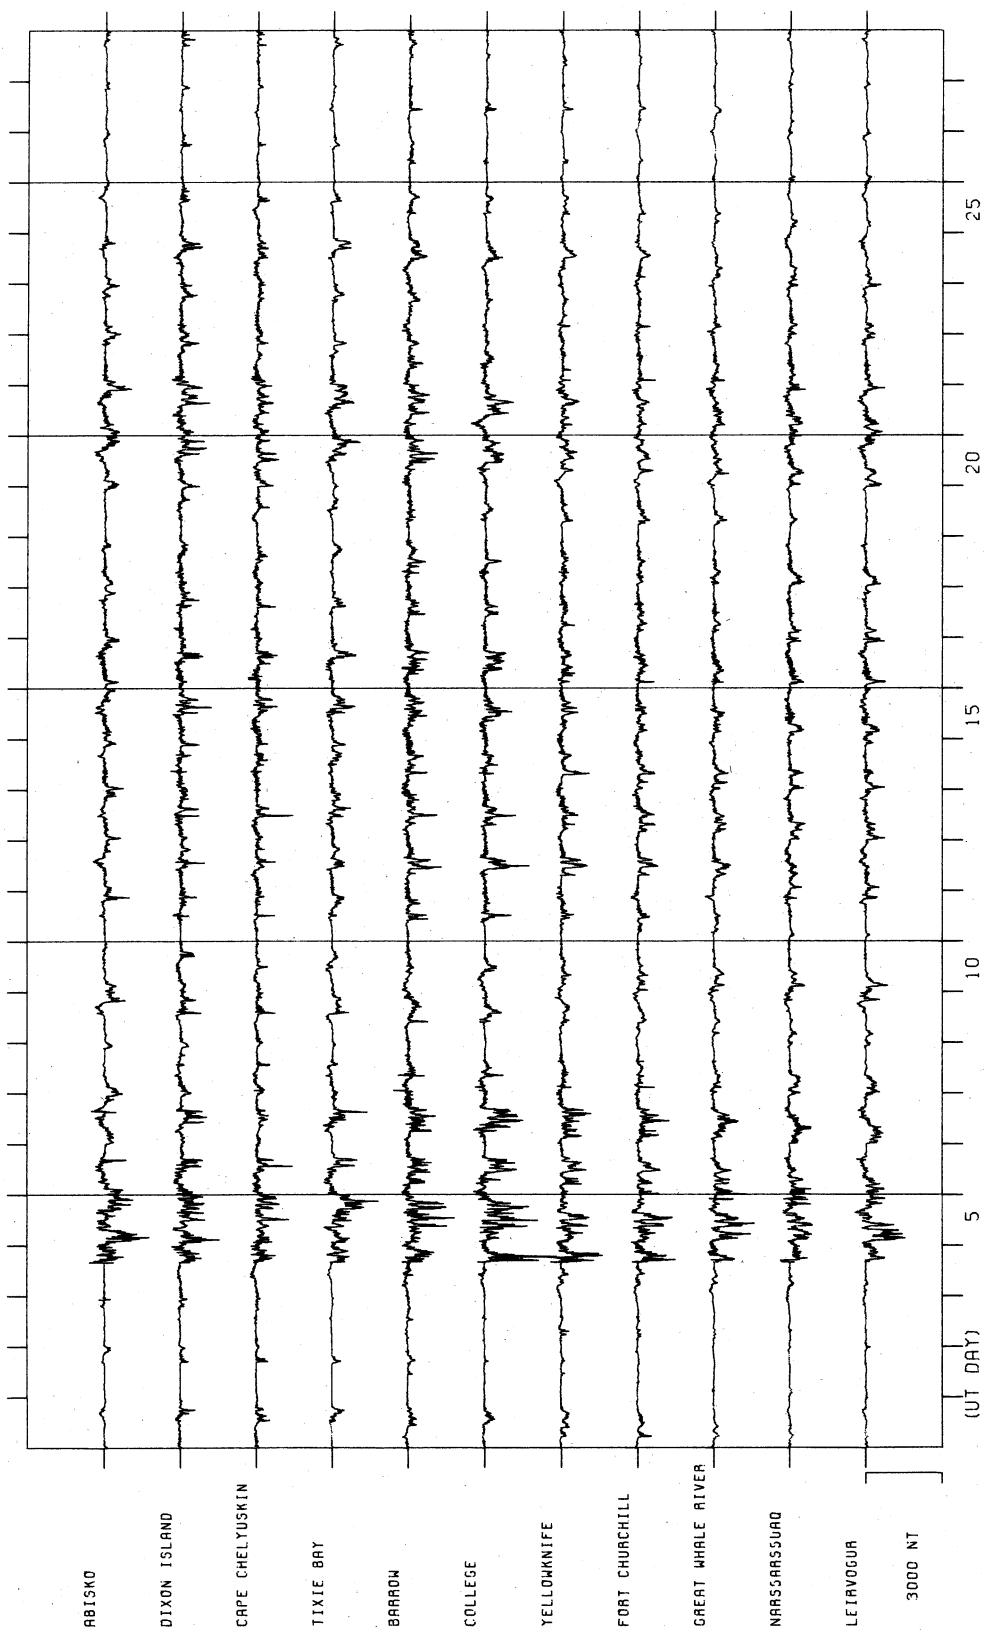

FIGURE 6

The H traces of magnetograms from AE(11) stations
in every month from January to June 1983.

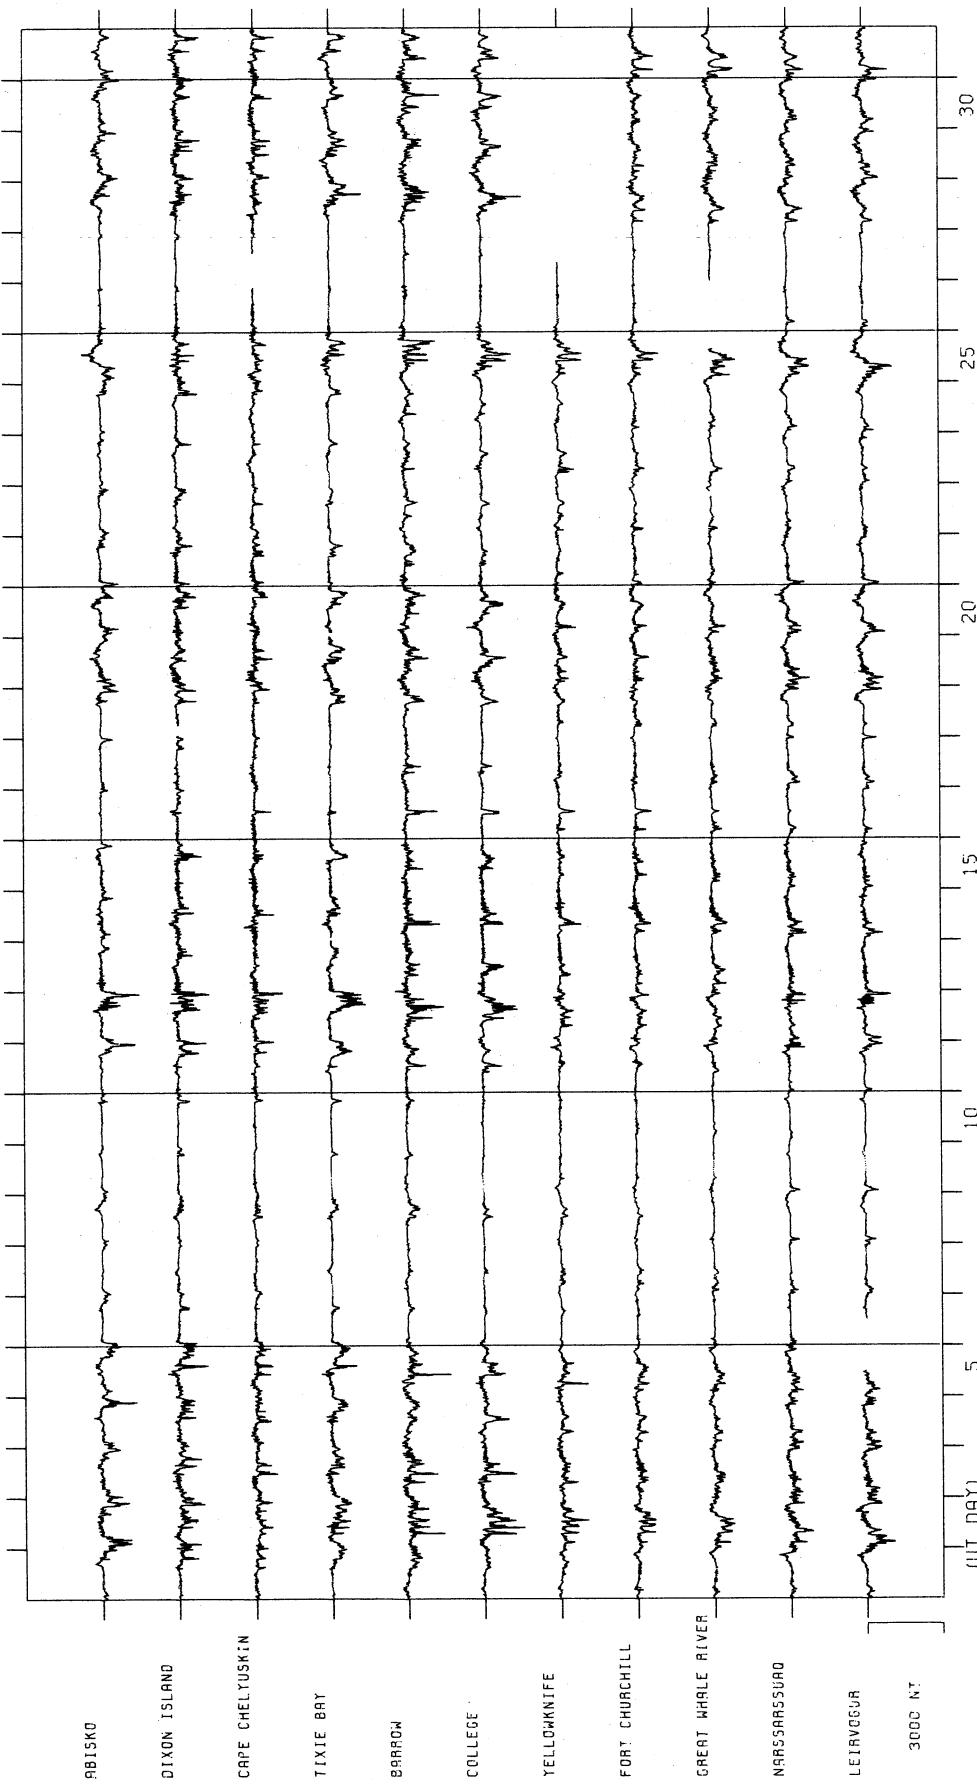

STACKED COMMON SCALE MAGNETOGRAMS FOR JANUARY 1983

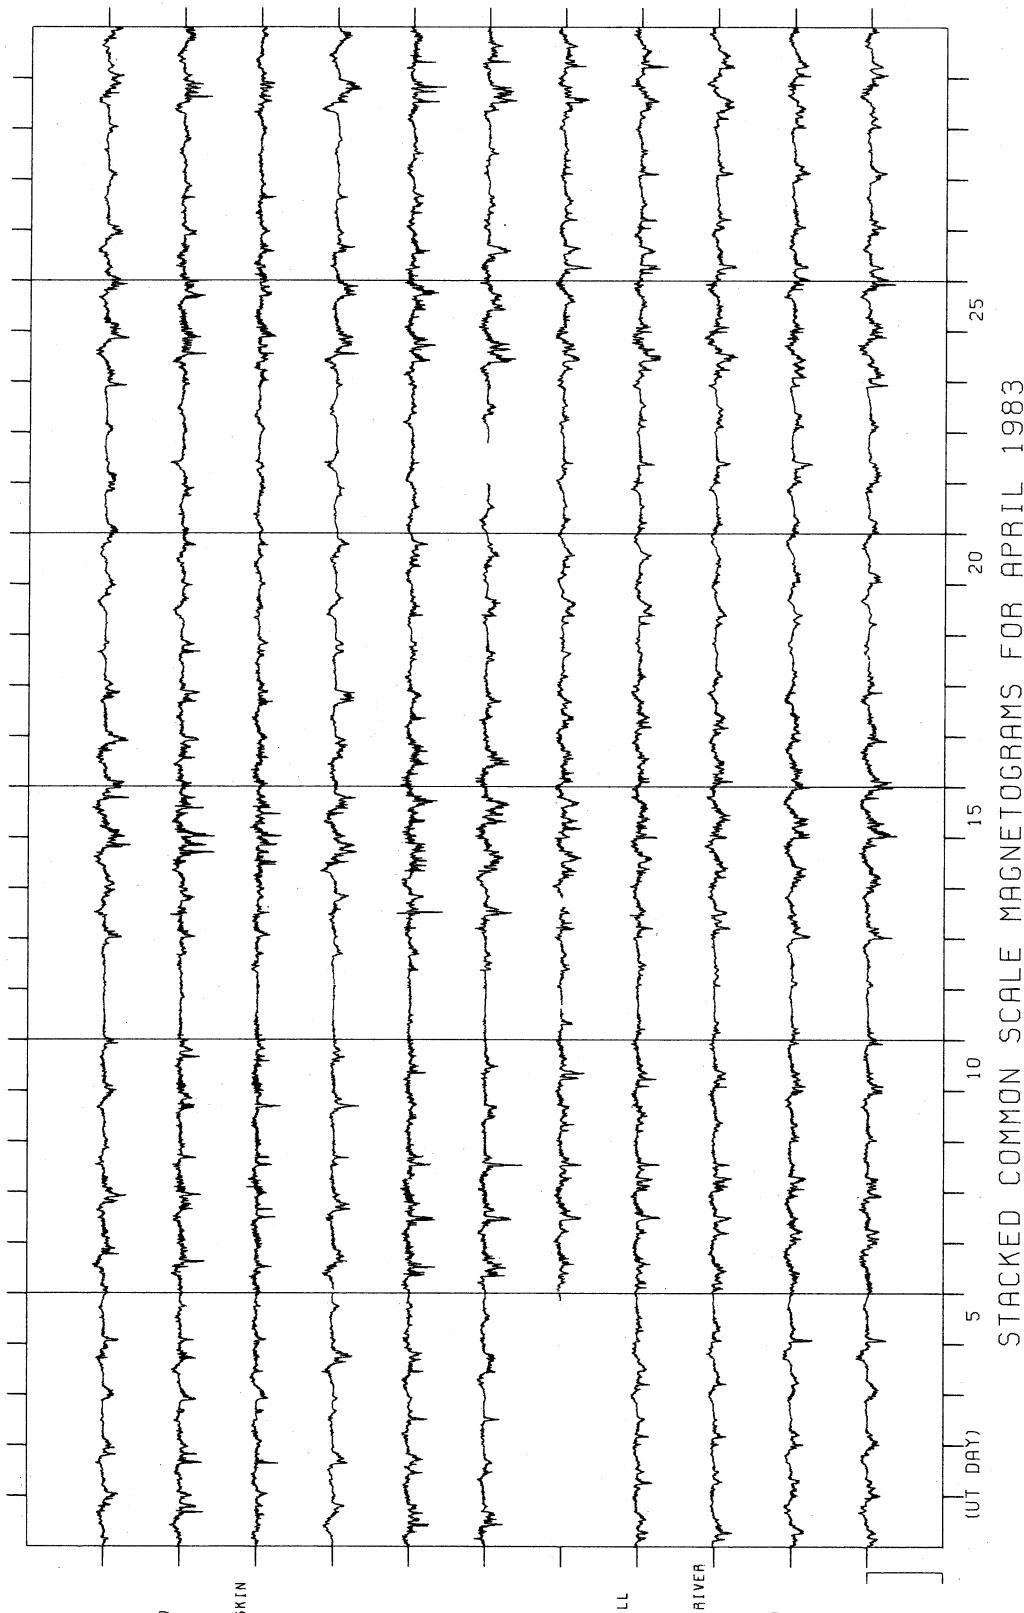

STACKED COMMON SCALE MAGNETOGrams FOR FEBRUARY 1983

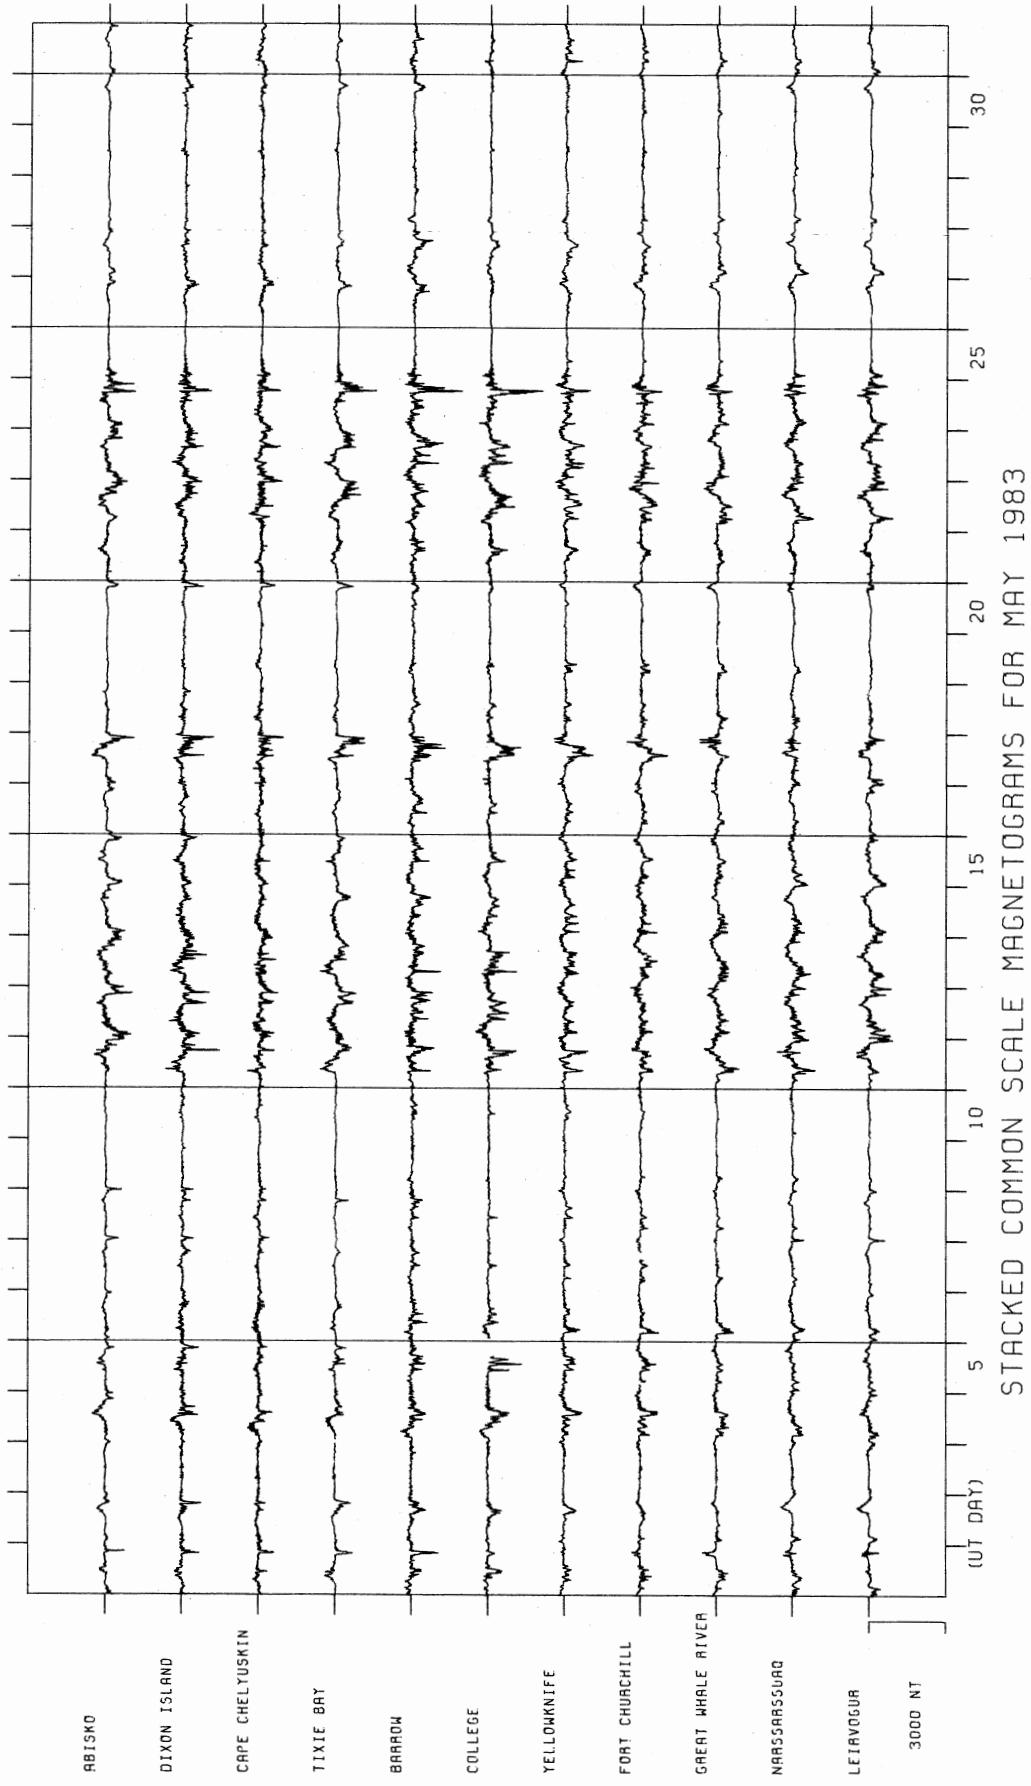

STACKED COMMON SCALE MAGNETOGrams FOR MARCH 1983

STACKED COMMON SCALE MAGNETOGrams FOR APRIL 1983

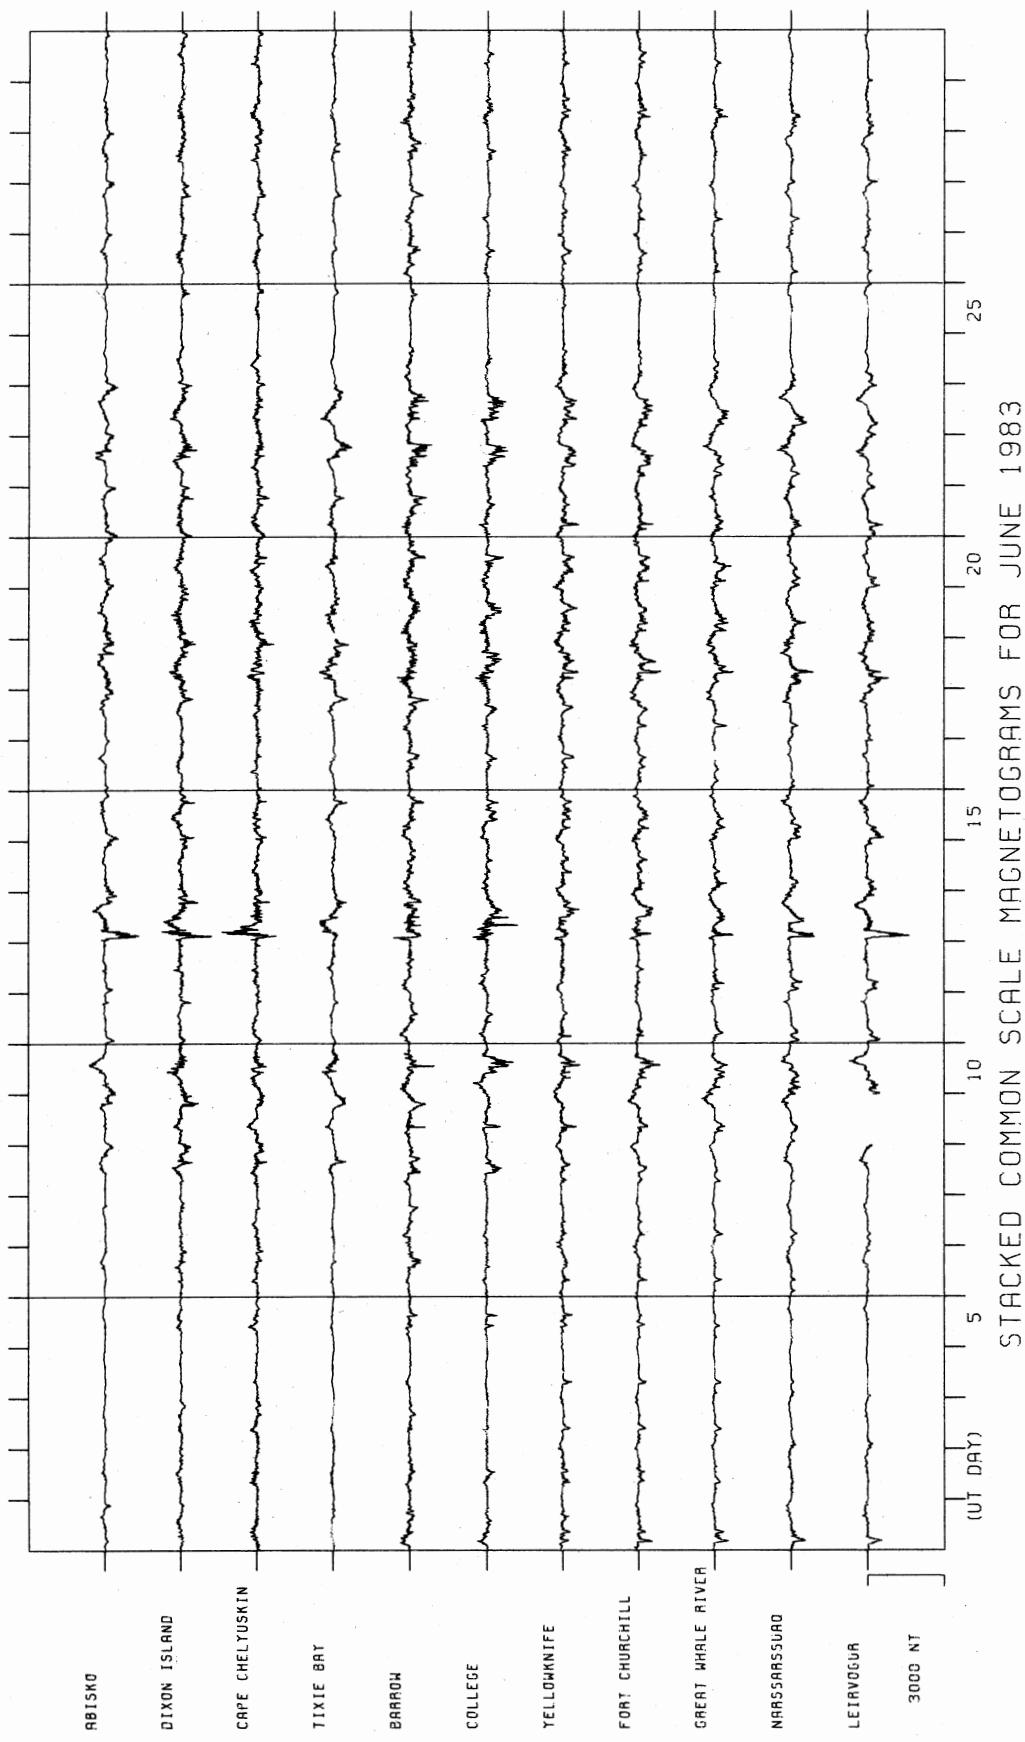

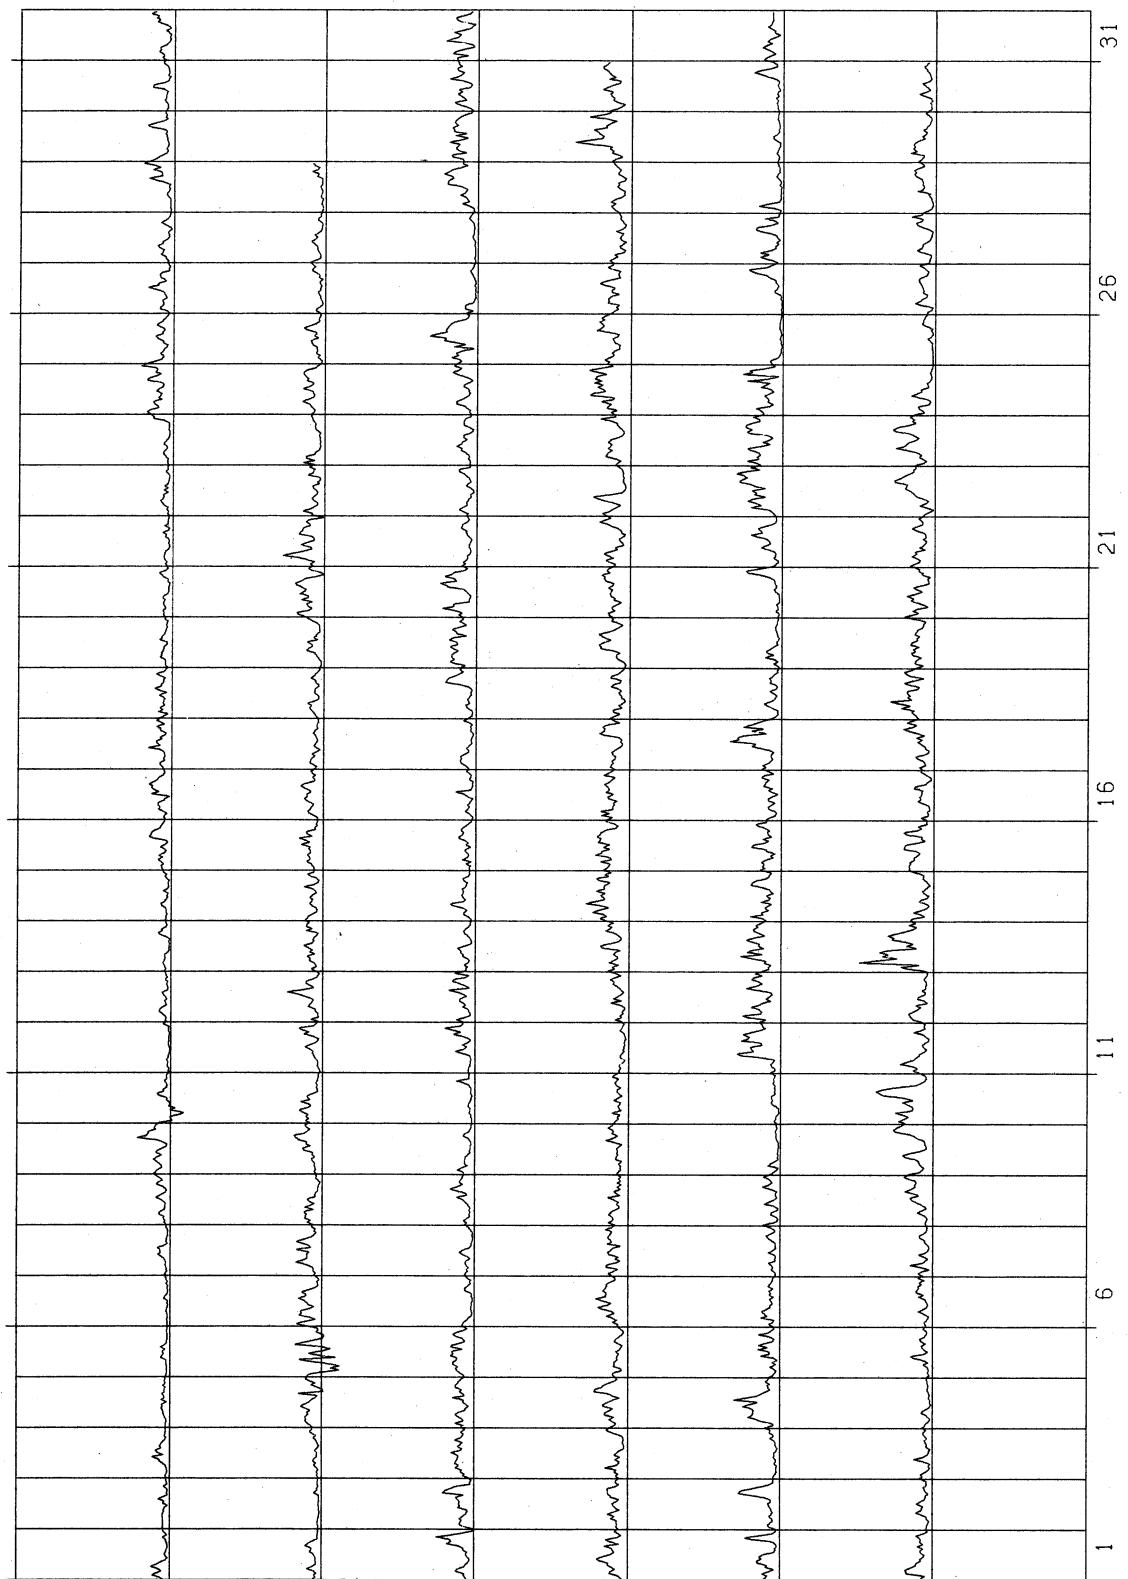

FIGURE 7

Plots of hourly values for each index from January
to June 1983.

Publications by the World Data Center C2 for Geomagnetism.

1. Data Catalogue

Data Catalogue of World Data Center C2 for Geomagnetism

Published in
1984

2. Data Book

No. 1	Equivalent current systems of the daily geomagnetic variations in December 1964	1978
No. 2	Electric fields and neutral winds in the ionospheric dynamo region as deduced from the daily geomagnetic variations in December 1964	1979
No. 3	Auroral electrojet indices (AE) for January-June	1978
No. 4	Auroral electrojet indices (AE) for July-December	1978
No. 5	Auroral electrojet indices (AE) for January-June	1979
No. 6	Auroral electrojet indices (AE) for July-December	1979
No. 7	Auroral electrojet indices (AE) for January-June	1980
No. 8	Auroral electrojet indices (AE) for July-December	1980
No. 9	Auroral electrojet indices (AE) for January-June	1981
No. 10	Auroral electrojet indices (AE) for July-December	1981
No. 11	Auroral electrojet indices (AE) for January-June (AE-index for 1982 will be published in Data Book No.12 and 14)	1983
